5 Surefire Ways To Find The Right Dentures

By Daphne Cameron

While dentures aren't the best substitute for your own teeth, they are certainly helping some people keep their smile. With these tips on finding the right dentures for you, you don't have to stop grinning.

Talk with your dentist

Though it might seem that your dentist might be the one to talk to you about dentures, you also may want to broach the subject before it becomes an immediate issue. Perhaps you have to take certain medications that can affect your dental health—epilepsy drugs, calcium channel blockers, or transplant drugs.

Or perhaps you have troubles taking care of your teeth due to some other illness or memory problem. The best way to get the dentures that you need is to have an honest and open discussion with your dentist to discuss your options.

Find out the types of dentures

Information is your best weapon in the fight to choose the right dentures. Realize that there are partial, complete and overdentures available for each individual situation.

Like the names imply, partial and complete dentures are those that may take up only portions of the mouth (partial) while the complete dentures are taking the place of removed teeth. Overdentures are those that can fit over the teeth that remain.

With your dentist, you can determine what option will work best for your mouth's situation as well as for your overall comfort.

Have your dentures immediately

One of the newer ways to have your dentures fitted is to look into immediate dentures. These are dentures that are created before you have your teeth removed so that you don't have to go through

5 Surefire Ways To Find The Right Dentures

any embarrassment of having gaps in your smile.

While these will need to be adjusted as the jaw bone heals, these can be the right dentures for those that may have gaps in their front visible teeth.

Go the conventional route

While conventional dentures require that you be without teeth for a few months as the dentures are being made, these dentures tend to fit a lot better than the immediate dentures.

You will have your teeth extracted and your gums will have time to heal as your new set of teeth is being made. There may be times of discomfort and self-consciousness, but overall, this is the better way to get dentures.

Take into consideration what you want

When it comes to choosing the right dentures for you, you want to take your time with your decision. This might mean consulting several dentists in order to see what each can do for you. Look at pictures of the dental work that they have previously done to see if you like the results that they have achieved.

If you have troubles after receiving your dentures and find that you are using adhesive on a continuous basis, your dentures may need to be refitted.

Dentures can be a fresh start to a great smile, but only if you take the time to find the best dentist and the best dentures for you.

Why The Surefire G2 Flashlight Is A Great Buy

By S. Arya

5 Surefire Ways To Find The Right Dentures

The Surefire G2 flashlight is an excellent buy. The G2 is the most cost effective flashlight Surefire manufacturers and provides the same light output as Surefire which cost four times as much.

The Surefire G2 comes in an indestructible Nitrolon body which is basically a reinforced form of plastic. Do not be fooled this light is lightweight, powerful, compact and pack a punch. It puts out sixty lumens which is equivalent to other Surefire lights such as:

· Surefire 6P · Surefire G2Z · Surefire C3

The above mentioned lights are much more expensive then the G2 because of the aircraft aluminum used versus the Nitrolon.

The Surefire 6P puts out a clean, focused, tactical beam that produces four times the average two D Cell flashlights. The Surefire G2 has the capability to temporarily blind an attacker and also has the ability to disorient someone who has adapted their vision to the night. An optional Surefire P61 lamp assembly is available which doubles the run time however the battery life drops 66%. The Surefire G2 is supplied with the standard P60 lamp assembly which provides 60 lumens for 60 minutes, however with optional P61 a searing 120 lumens is produced but the run time is a mere 20 minutes.

The Surefire G2 requires 2 CR123 batteries and comes in four colors:

· Black · Desert Tan · Yellow · Olive Drab Green

The Surefire G2 flashlight features the following:

· Weatherproof body with O Ring Seals · Tail cap switch when pressed is a momentary light however when twisted it is constantly on · Turn the switch two full turns from the on position and the safety is engaged to prevent accidental lighting when being packed or traveled. · Supplied with 2 CR123 Batteries

The Surefire G2 is 4.9 inches long and 4.1 ounces heavy. Optional accessories include:

· SC1 Spares Carrier for carrying bulbs and batteries (spare) · Z33 Lanyard · FM37 Beamcover and Lens protector · V70 Speed holster · V20 Fixed Loop Holster · F28 Traffic Wand

The Surefire G2 as mentioned earlier is the most cost effective light and yet provides the equivalent performance of much more expensive Surefire lights. If you do not want to shell out the big bucks for a Surefire this light is an excellent choice.

ProductWizard.com has been involved with the sales of Surefire Flashlights for over six years and has a well rounded knowledge handheld illumination technology. For further information go to
