5 Ways To Buy Cheaper Books

By Morgan D. James

So you've just spent thousands of dollars on tuition; now you can register for your courses. When you look at the book list for each class, you realize that your professors expect you to spend at least another thousand on books! Here are some ways you can minimize the expenses of books.

1. Buy online.

If you go to alibris.com, or amazon.com, or chapters.com, you can often get a good selection of books at a discounted price. Alibris and Amazon are particularly helpful because they have used books available. Amazon offers you used books through their marketplace option. Alibris automatically searches for used books. Remember that when you order books online you can often get free shipping. At Amazon, the free shipping is not available with used books. So grab a calculator and find out what the best option for you is.

If you start looking for your books in advance, certain online sites offer you discounts if you shop more often. Alibris will send you a coupon for 10% off your next purchase. Is it worth it to break your order up to get this discount? Do you know someone who recently bought books online, and can you borrow their code? Can you find any special discount keys on the internet? (These discount codes won't be available on the site itself: you will need to google other sites to find out).

One last point about buying books online: eBay, though not specializing in books, often has books at a fraction of their cost. Just check the shipping prices to make sure that you are getting a bargain. You can get new or used books on eBay: often eBay stores are the best place to search so that you can "Buy it Now"; sometimes waiting for the end of an auction is the way to go.

2. Scan Around School.

Used bookstores are often located very close to college and university campuses. Often times, students sell the school books that they don't want to use again. You don't have to spend hours in each bookstore looking for each book: simply walk into the bookstore with a list and ask the store clerk or owner if they have what books you are looking for. The person in the bookstore will be able to help

5 Ways To Buy Cheaper Books

you much more quickly than you would be able to find the books yourself: they might check a computer, or they might know exactly where it is, or they might be able to take you to the spot on the shelves where it would be if they had it.

3. Be edition–savvy.

Buying used would be great, but you need to have edition 847 of Microbiology; it just came out this year! Ask your professor if it is okay to use an older edition of the text. Many textbooks are reprinted frequently, and even your prof can't keep up with the latest updates. Offer to photocopy the extra chapter, if there is an extra chapter added to the latest edition. If you need to have the latest edition, buying online is probably your best way to find the cheapest one.

Textbooks are not the only books that you have to be edition–savvy for. If you are slated to read *Cat on a Hot Tin Roof*, there have been many different versions of this book published (and some you can get

at a used bookstore for only a scant few dollars). Ask your prof (you can phone or email them) if they want you to have a particular edition. Sometimes they want you to (literally) be on the same page as them; other times they just want you to follow along as best you can. If they want you to get a certain critical edition, again, offer to photocopy the literary criticism.

4. Weigh the Benefits.

Some books are considered recommended reading. Is it worth getting? Is the prof ever going to refer to these books? Why not wait until later in the year. If the prof mentions something crucially important in a certain book, then you can consider getting the book later if you need to. You'd be surprised how many books make the syllabus without even being mentioned through the entire year.

Other times, it might save you time and hassle to simply get the book. For instance, if you are in a first year English class, and they recommend buying the *MLA Handbook for Writers of Research Papers*, you might as well get the book because you will be using it for the next four years. Ask an older student in your class what books are worth getting.

If it's not worth buying a book, you can often read what you need to read in the library. You can also borrow classmates' books from time to time.

5. Photocopy Everything.

I'm not advising that you break any copyright laws here, but sometimes if you can photocopy books, (entire out–of–copyright books, courseware packs, or relevant chapters) you will be saving yourself a ton of money. And the cheapest places to photocopy books are often not on campus. And it's often cheaper to do it yourself rather than take it to a service. Ask a classmate to borrow the books for one day: and always return them the next day.

These five hints to buy cheaper books can more than halve your book expenses. Then you can spend your money on other, more important things (like rent, tuition, or refreshments). Be an active

comparison shopper to save yourself tons of money.

Student Loans contains all the information that you need to get ready to go back to school without breaking the bank.

Free Audio Books - What Is The Best Method?

By Paton Jackson

When I was young I read all the books written by Douglas Adams. I liked it so much that I have managed to persuade my parents to buy the audio books of the same titles I have read. I remember getting large boxes with up to twenty audio cassettes for each book and listening to one cassette each night.

Today one can get audio books in 3 different methods - audio books on cassettes, audio books on CDs and audio books on MP3 or other media files. In this article I will examine the pros and cons of each audio book method.

1. Audio books on cassettes are the oldest method. Their quality is moderate. However, their quality maintains stable for a long period.

Each cassette usually contains one or two chapters of the audio book. Most of the listeners find it inconvenient to change the cassettes so frequently. However, some find it easy having a cassette for each chapter.

The main disadvantage of audio books on cassettes is the fact that audio book on cassettes weight more than the old fashioned book and occupies more space. It is definitely less convenient.

Furthermore, it costs more than the same title on all other methods - the old fashioned book, audio book on a CD or on an MP3 file.

2. Audio books on CDs exist in the market for more than 10 years. However, they are not as popular as one think it should be. Although it is cheaper and far more convenient than audio books on cassettes it is still as common as audio books on cassettes used to be. Some tend to ascribe this phenomenon to the mass return to the old fashioned books in the past few years.

3. Audio books on MP3 or other media files have lots of advantages - they are much cheaper than the other audio books' methods, they occupy no physical space at all and their quality is good. Their popularity increased enormously in the past year, but they are still less popular than the other audio

5 Ways To Buy Cheaper Books

books' methods. It is assumed that the popularity of MP3 mobile players as iPod will initiate a revolution considering audio books.

911 Corp. has executed an independent research to find the best place to get audio books from. Find out the clear results and all about audio books only on
