All About Mesothelioma

By tony thompson

Mesothelioma is a cancerous tumor of the pleura or peritoneum. Mesothelioma is caused by

asbestos. Asbestos is Usually used as a fire resistant and heat resistant insulating material. You can get three types of asbestos white which Is very common, blue and brown which is the most dangerous. Asbestos is now controlled by stringent regulations. Mesothelioma causes pain and breathlessness. If you have the tumor of the pleura, this is the membrane surrounding The lungs, other symptoms which may occur are chest pain, cough and difficulty breathing more so if the pleura effusion Develops the outer and inner layers of the pleura can become thickened. Excess fluid will fill the gap between them when This happens it means that the lungs can not expand, making you have shortness of breath.

If you have the tumor in the peritoneum it can cause a obstruction of the intestines or a enlarged abdomen. Mesothelioma can Be diagnosed by a chest x ray and also a biopsy. This is where a small amount of cells or tissue are taken from the body To be looked at under the microscope. If Mesothelioma is diagnosed and the cancerous tumor is small enough, surgery Can be fairly successful if not and the tumor is large there is not any successful treatment, although sometimes radiotherapy May be offered to help ease the symptoms. Mesothelioma of the peritoneum cannot be operated on and there is no other form of treatment and will usually lead to death with in one or two years.

Mesothelioma can develop even after dealing with asbestos for just a short time. The usual gap between a person working with asbestos and being diagnosed can be up to twenty or thirty years. Mesothelioma is contracted by people who work With blue and brown asbestos. For more information please visit my

Mesothelioma Research: Search For Hope

By Kirsten Hawkins

Mesothelioma research refers to the studies for discovering new facts or information about mesothelioma cancers. Mesothelioma is a life threatening cancerous disease. It affects the lining of abdominal organs and lungs. Only known reason of this disease is exposure to asbestos particles. Diagnosis of mesothelioma is a difficult process. This is mainly because asbestos particles may lie dormant in the body for up to 50 years before appearance of symptoms. Average survival time of mesothelioma patients is 1–2 years. Mesothelioma research is important considering the increasing number of mesothelioma patients every year.

Key Points of Mesothelioma Research

Most of the mesothelioma research going on today is focused towards the effects of asbestos particles on human cells. Scientists undertaking mesothelioma research are studying the process through which asbestos corrupts the healthy cells of the body. Ongoing research about mesothelioma provides a ray of hope that sometime in the future it may become possible to prevent the damaging effects of asbestos particles on human cells.

During the course of mesothelioma research, experts are also performing clinical trials on the mesothelioma patients. They are conducting clinical trials on the patients who are diagnosed for mesothelioma cancers on early stages as well as later stages. Doctors emphasize on trials on both types of patients because both of them equally require relief from mesothelioma cancers. Ongoing mesothelioma research and newer information every day provides hope to mesothelioma victims that any trial can result into the discovery of an effective treatment for mesothelioma cancers.

Sponsors of Mesothelioma Research

Many organizations including the companies responsible for the exposure to asbestos particles are sponsoring mesothelioma research. It is the moral duty of those companies because many people are on brink of death because of their negligence. Law firms are also keeping a close watch on mesothelioma research because many patients are adopting legal course for seeking mesothelioma compensation. A mesothelioma law firm has better chances for getting compensation for its client if they better information about this dangerous disease.

Kirsten Hawkins is a asbestos and mesothelioma specialist from Nashville, TN. Visit
