**An Environmental Science Degree: An Investment In The Future**

**By John Edmond**

The world is changing faster now than at any time since the last ice-age 10,000 years ago and the major cause of that change is man. To allow the changes to continue unchecked is reckless at the least. Monitoring those changes and being able to convince others that we have to do or not do activities that affect the environment will take well qualified people with the relevant environmental science degree.

It has often been said that the education offered in colleges and universities are a direct response to the job market and the trends therein. If this is so then the future for professionals with an environmental science degree could not be much brighter.

After the industrial and the informational age, we are quickly entering the environmental age, where the environment and its characteristics are of paramount importance.

Never before, as a society, have we paid real attention to the environment and many would argue we still do not pay enough attention. Continuous exploitation of the earth's natural resources and constant generation of heat and waste products have caused significant damage to the environment.

We live in an age where knowing, understanding and adapting to the environment is no longer a choice - it is the only way ahead. This age demands qualified professionals, especially those with professional environmental science degrees.

A number of allied degrees find their place alongside conventional environmental science degrees. Big business has, for a long time, been required to comply with safety and industrial security requirements. In industries like biotechnology, due to the nature of the products, there are numerous opportunities for disaster.

Disaster management and hazardous material management are fields of study that are very much in demand by today's high technology industries. While often these studies are not comprehensive enough to be offered as science degrees by themselves, these courses are more often than not partnered with environmental science degrees as part of a package deal.

## An Environmental Science Degree: An Investment In The Future

For the environmental science degree student, it can be an advantage. While pursuing their main course of study, they can get qualifications in a number of allied fields. This makes them thorough professionals and capable of entering a wide range of industries when they graduate with their environmental science degree.

As a result of the long-standing lobbying activities, the United States is home to some of the worlds largest and best funded environmental groups and many professionals, working for these groups, have environmental science degrees.

Jobs exist with government bodies, lobbying positions with political groups and corporate organizations, research positions with foundations and other research organizations. More opportunities exist in the environmental safety departments of leading oil majors and even faculty positions at colleges offering environmental science degrees. They all offer lucrative positions that

professionals with an environmental science degree can hope to secure.

An environmental science degree does not deal with environmental topics alone. Due to the very nature of their work, professionals who acquire an environmental science degree need to be equipped with allied subjects like compliance, law, criminal justice, and public communication.

The courses of study that ultimately lead to a environmental science degree are varied and interesting. Someone with an environmental science degree is likely to be tasked with protecting our environment as a result we need the very best!

If you have a concern about the World we live in or a desire and determination to do something to improve a steadily deteriorating habitat, then an environmental science degree would be an excellent place to start.

Anyone aspiring to be an environmental professional would typically need to go in for a BS Environmental Science Degree before going for an MS or a PhD in Environmental Studies.

Environment science degrees are offered in all major colleges and universities across the United States and the Western World. An environmental science degree can be taken full-time, part-time or by distance learning so whatever your circumstances you can contribute.

John worked for many years in insurance and finance and recently completed a degree in Creative Writing. He now writes on a number of topics including education. Go to

**Engineering Degrees Online - Becoming a Pro From Home**

**By Nelson Widrow**

So, your hectic schedule prevents you from spending all day on campus and streaking through the quad during the night. Well, that's unfortunate, however it certainly doesn't have to preclude you from following your dream of beginning or continuing your engineering education and career. Nowadays, the unbelievable plethora of online engineering degrees available, for every level of study, there's a perfect fit to meet anyone's demands.

If your experience and history has gone as far as graduating high school, or even attaining your GED, starting off with an associate degree. You can still specialize in whichever forms of engineering matches your interests and abilities. With the online engineering degree, there's: civil, electrical, mechanical, environmental engineering and more. You're able to gain the know-how and practical experience that you need to get started working in your field. And the rigidity of the schedule is up to you. If you absolutely overwhelmed at your job, take longer. If you feel like you can handle a bigger load of class credits, take on what you can. With online courses, you make the schedule. You can study online or with books at your convenience, a combination of the two, anything but come in to the classroom when it doesn't fit into your schedule.

But online engineering degrees certainly don't stop with associate degrees, your undergrad and graduate degrees are within your reach if that's the level of education that you are ready to start, that's fine. Just imagine, not having an interruption in your work and being able to present a potential employer with your masters degree in just a couple years. The future is up to, as is the university schedule, when you utilize the benefits of online engineering degrees.

Nelson Widrow is an author who's written multiple articles about online degrees. Read more of his articles including:
