Atlantis Discovered?

By Kenneth J. McCormick

Atlantis Discovered?

by: **Kenneth J. McCormick**

Well we definitely found Atlantis! This is according to Robert Sarmast. But who, exactly is Mr. Robert Sarmast? Mr. Sarmast was an architect who became fascinated with the search for lost civilizations and ancient history. For years he traveled, gathering facts in his pursuit of these ancient cultures. He was extremely interested in Atlantis. He published a book on the subject in 2003 entitled "Discovery of Atlantis" and has come to the conclusion that the island of Cyprus was where Atlantis existed.

There are many theories as to where Atlantis existed. Lately the South Pole or Antarctica has been suggested. In the past so many different places have been chosen that if we were to make a list of them, they would cover many different areas of the Earth. A few years ago ruins were found off the coast of Japan and many suggest that this was the location of Atlantis. The same is true with the Bahamas. The famous Bimini Road is said to be a relic of Atlantis. Another area which is said to be where Atlantis was situated is South America. After all there are many mysterious cities that have been abandoned there that were built in such a way as to defy construction methods. In some of these places the stones are so close together that even a sheet of paper can't fit between them, yet no mortar was used. In other of these cities, huge stone were hauled to the tops of mountains to be used in city construction, a feat that we can't even equal today. There are other places where Atlantis was suspected of existing and some of these are in the middle of the ocean. Some people say that Atlantis sank and that is why we can't find its location. Oh there are so many different stories about Atlantis.

So, why exactly do people believe that they know where Atlantis was, or in fact, that it even existed? Homer, the famous Greek story teller and author, lived around the 8th century BC. Originally it was believed by modern day people that Homer was a great writer of fiction, but then things began to happen that suggested that maybe his works weren't fiction after all. The City of Troy was unearthed. Homer had written the Iliad, the story of the battle between the Greeks and the city of Troy that lasted ten years. All of a sudden a work that all though was fiction may have been based on fact. People began to look at the Odyssey, another of Homer's famous works. If the Iliad were true than could the Odyssey be true also? This is important because many think that the Phoenician island of Scheria might

Atlantis Discovered?

have been Atlantis and Homer mentions this island in his work. Plato was another ancient greek as we know. This ancient philosopher lived about 400 BC. There are two books written by Plato that have passages referring to Atlantis. These books are the Timeaus and the Criteas. They seem to indicate that Atlantis was located in the Atlantic Ocean and was the home of an advanced race that went to war against Athens and lost. It was said that Atlantis was located before the Pillars of Hercules. It goes on to say that they, the Atlantans, had defeated many European countries but the Athenians were able to drive them back out of Europe. The story goes on to say that records of this feat were lost due to a great flood that wipe out part of Athens and all of Atlantis. In Criteas Plato gives a very detailed account of Atlantis.

Now we know why people believe that Atlantis did exist. so let get back to Mr. Sarmast. Why Cyprus and not somewhere else? "It's definitely Atlantis,"Mr Sarmast said, referring to Cyprus. Sarmast states that the clues were there in Plato's descriptions. He said that received data from the National Oceanic and Atmospheric Administration that fits perfectly. He went on to say that this data was gathered in

1987 when a scientific survey of the Mediterranean was taken. Then to further back up his claim, he stated that he had used sonar to find unnatural formations that were found at the center of the ancient city of Atlantis.

A remote viewer was called in by Psychognosia, an organization who had challenged the finding. The *remote viewer formerly used his talents while in the US military. When he was asked to tell what he saw both now and 10,000 years ago he stated, that going back in time he could see a predominant city with buildings but now it was only ruins that were buried.

Could Cyprus be Atlantis? Why not, I guess it has just as good of a chance as anywhere else. Maybe Mr. Sarmast has hit upon something. I guess only time will tell.

*During the cold war, the US Government conducted experiments using individuals to 'see' targets anywhere in the world from the room they were in. The experiments were said to have meet with some success. This same people were said to be able to look into the past. The Soviet Union also employed these same type of people, they were called Remote Viewers.

Addendum:

Since I finished writing this story Mr. Sarmast has offered new evidence. He states that he has discovered Atlantis and is sure of the fact because he has an enormous body of evidence. He claims that ruins between Cyprus and Syria that are under the ocean fit the exact description that Plato gave. He said the dimensions and configuration of walls and a canal on a hillside above a rectangular plain that sit on the seabed match Plato's description perfectly. Experts eagerly await the imaging data that should be forth coming from a expedition there last week by Mr. Samast.

Spanish Investigators Have Discovered Atlantis's Archaeological Evidences Underneath The Sea, Near The Coasts Of Gibraltar...

By Antonio Beltrán

Spanish investigators have discovered Atlantis's archaeological evidences...

Atlantis = Iberia. Atlantis in Gibraltar and Ibero–Morrocian. The Georgeo's theories

(I Part)

Extracts the Georgeo's theories an hipotesis. (Forum Atlantis–Rising 2001–2004)

Official website of the Georgeos's tehories (in spanish)

Spanish investigators have discovered archaeological evidences underneath the sea, near the coasts of Gibraltar, that could belong to the Atlantic civilization described by Plato with the name of Atlantis and that the Greek philosopher located exactly in front of the Columns of Hercules (Straits of Gibraltar), next to the region of Gadeira (Cadiz, Andalusia) and of the Atlas (Morocco).

The first findings were made in the summer of the 2003. A report with the preliminary results was made, they consulted to great experts of reputation the International as George F. Bass and Cemal Pulak and the report were sent to the authorities and competent organisms of Spain and to UNESCO.

It has spent a year, and still no scientific institution has shown interest to study the solid evidences discovered by the team of collaborating explorers of the investigator and escriptólogo Georgeos Diaz–Montexano, intellectual author of the theories that support these discoveries on the identification of the kingdom of the Atlantis with the Atlantic towns of the coasts of Iberia and Morocco.

It is the first time in all history that is discovered architectonic rest and metal devices under the sea in a location that agrees in a 100% with the descriptions offered by Plato on the geographic place where it was the island and the Acropolis of the Atlantis.

Some investigators protest to have found Atlantis in other places of the World like Jim Allen, that places in a so remote place of Gibraltar as mountains of Bolivia, whereas Robert Samarst now is conceited to have discovered the Atlantis near the coasts of Cyprus, but Sarmast has still not discovered nor a single archaeological evidence, the only thing that does since it initiated his expeditions is to show pretty drawings of virtual maps recreated by knoll computers and natural geologic formation that it interprets like rest of Atlantis buried by the marine bottom.

The Spanish investigator Georgeos Diaz–Montexano, the German Ulf Ritcher and the Dutch Jonas

Berghman are the only investigators who defend with scientific rigor and adjusting to Plato's texts and many other authors of the antiquity the only possible location of Atlantis: the one that describes Plato,

Atlantis Discovered?

that is to say, near the Columns of Hercules (Gibraltar), Gadeira (Cadiz, Andalusie, Spain) and the Atlas (Morocco).

The Georgeos Diaz–Montexano's equipment of collaborator is the unique one who has shown the world submarine archaeological evidences that have been analyzed by the experts and they have still not been possible to recognize or to classify. These evidences are to depths that correspond with the old level of the sea of several thousands of years before the times of Solón and Plato.

It is paradoxical that the team of Spanish investigators has still not demanded the discovery of Atlantis, in spite of being those that more scientific evidences have and that nevertheless, Robert Sarmarst does not matter to him to affirm to the world that already has discovered Atlantis when the only thing that it has at the moment is not more than a few natural hills and formation – until it demonstrates to the opposite and a few virtual maps and recreations where it is reconstructed what Sarmast thinks that must have, but that not yet exists.

Robert Sarmast not yet has shown the world nor a single archaeological evidence that is solid and worthy to consider, whereas Georgeos Diaz–Montexano has shown to not one but several deposits with archaeological evidences "sui generis" that would have to be object of study between the scientists. Robert Sarmast has guided fundamentally by the speculations of the book pseudo–religious of Urantia, whereas Jonas Berghman, Ulf Ritcher, and in special, Georgeos Diaz–Montexano, prefers to guide itself by the scientific and philological study of the oldest manuscripts known Plato, and the scientific evidences contributed by geology, oceanography, the paleogeography, the sismology and archaeology.

Nevertheless, and against all logic, Robert Sarmast he is receiving, probably the greater advertising support at level the International that has never received a finder of Atlantis.

How can be explained these paradoxes?

Perhaps exists some false prejudice against the inhabitants of Spain and Morocco?
