Beware of prolonged erections, you aren't Priapus! by TJorgus

Dear Reader,

Please be informed of an important and very serious topic, for a happy sexual life.

Be careful! A prolonged, persistent and painful erection may occur tonight! And with the absence of knowledge, you'll be one of the statistical numbers amongst hundred millions of impotents! How you can avoid being a victim? Be informed! You won't like to be an up-to-date Priapus.

Erectile dysfunctions may appear spontaneously in all ages, without warnings (even a newborn baby can be affected).

Changes in our lifestyles, more stress, more drugs, abuse of alcohol, accidents, impotence therapies (injections, viagra...) and many other causes, even tight dresses, triggers the increase of this disease: Priapism.

Being a sufferer of priapismic erections and veteran of priapism, we highly recommend to spare ten minutes for your self and your family, and read the comprehensible, online information at:

Save the future, you won't be disappointed.

Kind regards,
Tore.

Penis Enlargement Pill Questions And Answers!

Beware of prolonged erections, you aren't Priapus!

By Oneil Wilson

Many of the pill sites including those that we have listed claim they can enlarge your penis without the need for a natural enlargement program. We personally doubt this (just being honest!) However we know that penis pills when combined with natural penis enlargement techniques can significantly enlarge your penis. Below is some FAQ on penis pills:

Other than enlargement, what are other benefits of penis enlargement pills?

As well as enlarging the penis the following benefits have been reported: Erection strengthening (erections like rocks) Increased sexual stamina Increased head size More intense orgasms Improvement in urinary flow Increased blood circulation to genital area. Higher sex drive Treatment of impotence Increased sperm production Overall improvement in sexual function Increased orgasm intensity.

Quite often we get asked; how can one get penis enlargement from a pill?

Penis enlargement pills internally stimulate development of the erectile chambers allowing for more blood to be held, thus giving a longer and thicker erection. The science is simple; the effects are astounding.

There are thousands of skeptical men in the world who can't quite believe that you can gain inches on your penis simply by taking a penis enlargement pill. We've done the math, researched the possibilities and ultimately tried out each available method of penis enlargement and our studies have shown amazing results.

Penis enlargement pills will not only increase the length and thickness of your erections but you'll also experience longer lasting and harder erections with most available products. This offers you gains in length, thickness, stamina and strength. Most men appreciate help in at least ONE of these areas – penis enlargement pills help in them ALL!

Are penis pills safe?

Generally speaking, enlargement pills are quite safe. This is because their ingredients are non-prescriptive, consisting mostly of natural herbs. However, you should ALWAYS read the ingredients for yourself. Some pill companies state that men with diabetes or genital nerve damage should NOT take enlargement pills.

What is the daily dose I must take?

You usually take 2–3 tablets per a day. A month's supply is either 60 or 90 capsules.

How much do pills cost?

Penis enlargement pills are not cheap. They usually cost anywhere between \$40–\$80 per a month.

Beware of prolonged erections, you aren't Priapus!

However if you buy in bulk then you usually get large discounts. You usually have to take them for no longer than 3–4 months.

Will I see results, for sure?

Results may vary but you WILL see some results. WE have many e-mails from readers of this site stating they have enlarged their penis by up to 2 even 3 inches in just a couple of month's. We have also had men that have gained only 1 inch but you will benefit from ALL the additional things listed above no matter what size gain you make.
