Breast Cancer The Cure

By Gerald Armstrong

Breast Cancer The Cure

by: **Gerald Armstrong**

There is no known cure for breast cancer. More than 1.5 million people will be diagnosed with breast cancer this year worldwide. Scientists don't know why most women get breast cancer, yet breast cancer is the most frequent tumor found in women the world over. A woman who dies of breast cancer is robbed of an average of nearly 20 years of her life. Breast cancer knows no social boundaries. It's a disease that can affect anyone. Some prominent women whose lives that have been touched by breast cancer include Jill Eikenberry actress age 52; Peggy Fleming age 49 figure skater; Kate Jackson age 50 (Charlies Angels); Olivia Newton-John age 50 actress singer; Nancy Reagan age 77 former first lady; Melissa Etheridge age 43 singer; and the beautiful Suzanne Summers actress. These high rates of breast cancer are not acceptable to the women of the world and must be met with scientific research that provides results.

Despite over a decade of research, and more than \$1.7 billion spent, hundreds of women worldwide are dying from breast cancer every day. Yet doctors don't know how breast cancer starts or how to cure it. Doctors are still approaching treatment for breast cancer in the same old fashioned ways: surgery, radiation, and chemotherapy. Barbaric treatments...And scientists keep doing the same old redundant research that's simply not working. It doesn't have to be that way. Gen Cells Cures is a scientific biotechnology company that is focused on a cure for breast cancer. The company is dedicated to curing breast cancer before it's too late for you. We're not interested in a cure in five, ten, or twenty years from now. We want your cure for breast cancer within a year or two. We don't want you to have to undergo surgery, radiation, chemotherapy or take toxic drugs.

Why Gen Cells Cures? You can search the medical journals; you can search the internet until your blue in the face. You will find the same old news which is no new news about breast cancer research and treatments. Breast cancer research is locked up in a black whole. Gen Cells Cures is approaching the cure for breast cancer from different angles and using tomorrow's scientific technologies today. Our expertise is in stem cell research and genomics. Malfunctioning stem cells have already been linked to the development of breast cancer. We're not talking about using generic stem cells from an egg and

Breast Cancer The Cure

sperm cell. There is no genetic match for you with the politically controversial generic stem cells that are always in the news. The isolation of cancer stem cells, coupled with our understanding of genetic mutations causing cancer, and our knowledge of genomics will result in ways to eliminate cancer cells while sparing normal breast tissues.

Genetics and Breast Cancer

People will tell you to accept what you can't change...Your genetics, your genes, the genes your mother and father handed you when you were born that came with their particular genetic make-up. Most inherited cases of breast cancer have been associated with two genes: BRCA1 and BRCA2. The past five years has been a period of unparalleled discovery in the field of genetics, genomics, and stem cell research, but these discoveries are not being applied to breast cancer treatments. A job that Gen Cells Cures definitely wants to get our hands dirty in. Recently researchers have found that by blocking a gene called beta1-integrin the growth of tumor cells can be stopped. When this gene was removed

the tumor cells quit growing. You don't have to accept the genes that you were given at birth. Gen Cells Cures will be able to manipulate your genes to cure your breast cancer.

Our Cancer Stem Cell and Genomics Program will bring together the top scientific minds in the world under one tin roof to maximize the use of diverse approaches to the understanding of cancer genomics fused with stem cell solutions. Gen Cells Cures isn't looking for a multi-million dollar biomedical research center like the Stowers Institute in Kansas City, which is a medical center to be admired. A rented tin shack will do just fine. Of course, we would accept hand-me down microscopes from the Stowers (billionaires who bought their own multi-million dollar biomedical research center) if they would be gracious enough to grant them to us or we would accept a small prime the pump check to move forward with our research. The Stowerses and all the scientists from the Stowers Institute have an open invitation to visit our lab in the Caribbean. What we are looking for is a cure for breast cancer to stop the humiliation, pain and suffering this menace to society causes millions of women and thousands of men worldwide, and not a new biomedical center... Every dollar invested with us goes into pure medical research and equipment. The same offer goes out to all the millionaires and especially the billionaires of the world. People that come to mind are: Paul Allen, Bill and Melinda Gates, Jon Huntsman, William and Alice Goodman, Ann Lurie, Jamie and Karen Moyer, Harold C. Simmons, Alfred Mann, Sumner M. Redstone, Michael Milton and the Palm beach billionaires, there are simply too many to mention. The combined wealth of the three Microsoft billionaires alone is more than ten times the amount spent by the U.S. Federal Government on research to fight cancer and other deadly diseases. We know we're in the wrong business to become billionaires ourselves. This kind of biotechnology has never produced even one billionaire. It's the cure for breast cancer that we want.

Simply put the cancer research organizations are funding the wrong researchers. It's time to go outside the normal research channels. Do something different. The same story year after year after year and no cure. These unmotivated researchers just aren't getting results. Let someone else have a shot at it. It's time to try something new and different. A different approach. There are races for the cure, golf tournaments for the cure, there are walks for the cure, there are foundations for the cure. These foundations have been funding the same ineffective research for more than twenty years now. These foundations have been betting on the wrong horse. Joining the crusade won't help if the research being

Breast Cancer The Cure

done doesn't take on a twenty-first century scientific approach. It's been time to move forward scientifically for five years now. But today's breast cancer researchers are stuck in a twentieth century mind-set. The Excuse is someday we'll find the cure, but someday doesn't help today's victims of breast cancer. We need top notch scientific action today.

The genetics are out of the bottle and stem cell research is moving forward whether the U.S. government likes it or not. Gen Cells Cures has moved off-shore to the Caribbean to avoid the political controversy over stem cell research. I am sure you won't mind a walk on the beach with me to talk about your cure for your breast cancer. Once we have the cure we can take the cure from the bench to the patient without a long and costly wait for FDA approval. There are many advantages to not having big brother breathing down your neck. The governments of the United States and Western countries have nothing to offer except road blocks, red tape and detours. Our patients don't have time for political smoke and mirrors. With a little luck we could have your cure before the time comes that you need that dreaded surgery and chemo.

Our gifted world-class researchers are visionary and have been schooled in winning and have courage, creativity, can-do attitudes, burning desires, unfaltering belief and an obsession that they will be there first. By first we mean years ahead of the other biotechnology companies. Like determined, fighting NASCAR drivers our scientists are living to take the chequered flag of biotech and win the

coveted race for the cure for breast cancer.

Focused on breakthrough discoveries, Gen Cells Cures nurtures a culture that encourages high standards of excellence, original thinking, hard work and a willingness to take risks. Our world-renowned scientists believe in themselves and its belief that gets us there. The company will seek to develop a work environment that is results focused and team-orientated. We compete against time. Though we compete intensely we maintain high ethical standards and trust and respect for each other. Quality is the cornerstone of all our activities. We seek the highest quality information, decisions and people. Our success depends on superior scientific innovation. We see the scientific method as a multi-step process which includes designing the right experiment, collecting and analyzing data and rational decision making. It is not subjective or emotional but rather a logical, open and rational process.

Our success comes from one simple fact; we are committed to being a science-based, patient-driven company, driven by that one special breast cancer patient...you.

Gen Cells Cures lost most of our one million dollar start-up money in offshore bank scandal and currency devaluation last year. We are now actively pursuing financial support. Unfortunately, the Gen Cells Cures team is made up of great scientific minds and not great marketers, salesmen, or fund raisers. Yes, we are looking for a millionaire or billionaire without a cause to support our work, but if you are not our wealthy saviour, we welcome any help, be it financial or a donation of your time. The scientific team is on stand-by. What we're lacking is the funding to go forward. We could use motivated salesmen to sell our research, fund raisers, skilled internet marketers or someone just to pass out flyers or mail out promotional material. We could use help from the media with publicity stories, ads and promotions to get the word out. We are particularly interested in looking for assistance from the

Breast Cancer The Cure

billionaires of the world; there are approximately 600 in the world. Billionaires like Sergey Brin and Larry Page (Google billionaires), Rupert Murdoch, Ted Turner, and Oprah Winfrey and others who control the media could get our life-saving message to the world fast. We are also hoping that some of my celebrities friends will come forward and spread their wings to help support our breast cancer research: Steven Seagal, Charlie Sheen, Wesley Snipes, Danny Glover, Erik Estrada, Tom Arnold, Dolph Lundgren, Roger Clinton, Bill Clinton, Usher, Hulk Hogan, Ivana Trump, John Secada, Sylvester Stalone, Arnold Schwarzenegger, Mike Reno, Richard Branson, Cindy Crawford, Cher, Demi Moore, Michelle Pfeiffer, and other stars that I have had the good fortune of meeting in person and others celebrities that I hope to meet in the future. (Photos of Gerald and the stars can be viewed at his promotional group listed below.) I am waiting to get my photo with Suzanne Summers!

Gen Cells Cure offers more than hope. We can do the job. If you're going to eradicate cancer you have to have the right people doing the right research. One thing is for sure. We couldn't do any worse than what the scientists before us have done. Which is virtually nothing! Help us alleviate the pain and suffering. Together, with your help, we can cure breast cancer.

Hello, Ladies and Gentlemen, I am Gerald Armstrong the owner of Gen Cells Cures a biotech dedicated to finding "The Cure" for incurable diseases and aging. Introducing to the world, the miracle of private, personalized medical research for the individual. I am passionate about molecular biology and what we can do with science to find "The Cure" for those of you suffering from aging and incurable diseases.

Breast Cancer Awareness Bracelet: Support A Noble Cause!

By Lisa Hyde

Breast cancer is a major health threat to women around the world. The number of women affected by breast cancer is shooting up every year. The sad thing is early diagnosis and treatment can lead to an almost 100 per cent cure rate among those affected by this illness.

Often the problem is not the unavailability of treatment for breast cancer, but late diagnosis. Awareness of the symptoms of breast cancer is the only way to assure that every person with the disease will get an early diagnosis. Many charities and cancer foundations have launched breast cancer awareness programs with this fact in mind.

Breast Cancer The Cure

The mass appeal of the LiveStrong yellow cancer bracelets from the Lance Armstrong foundation led breast cancer foundations to launch the breast cancer awareness bracelets. Pink was chosen as the color for these bracelets as an expression of the feminine character. Currently millions of dollars are being generated from the sale of pink ribbons and breast cancer awareness bracelets, which is going towards supporting cancer research and for spreading awareness of the disease.

What makes breast cancer insidious is that there are no clear cut symptoms or criteria that help predict this illness. It doesn't matter if you have a family history or not, whether you are young or old, you can still get breast cancer. Though age increases the risk of breast cancer, more than 20 per cent of the affected women are those under 50 years.

Even though breast cancer awareness bracelets first came out in pink color, they now come in a variety of colors and materials. Usually the rubber and the silicone awareness bracelets sell for around \$1. These bracelets can also be made of pearl, cats eye or any other suitable material and sell for around \$30. These metal and pearl bracelets can be used as jewelry, and at the same time they support a cause.

Custom-made breast cancer awareness bracelets on which you can stamp any message that you want are also available. These messages can be of hope, or endurance, or success. Often, the friends and family of the cancer patients wear these bracelets to show their support to the struggling person.

Over the years the sale of breast cancer awareness bracelets has helped many. There are many discussion and information groups online on cancer that are supported by money from the sale of these bracelets. There are 'fund-free mammogram' facilities available for those who cannot afford the diagnostic procedure, funded by the sale of these breast cancer awareness bracelets.

Be it a \$1 or a \$ 30 breast cancer awareness bracelet, it can go a long way in spreading breast cancer awareness.

Lisa Hyde-Barrett, a registered nurse and wellness advocate, understands the relationship between awareness and prevention and make breast cancer awareness a top goal! Please visit her site:
