Build your own search engine by Omair Aasim

Run Your Own Search Engine

Our hosted solution allow you to run your own search engine. You can have your own special search engine such as travel, games, animals, medical, software, sports, music, cars or any other category you like. We can create and host custom search engine for you by indexing only those sites which meets your selected category. You can also select to index the whole web instead of some specific category.

To create a good-sized search engine that can handle moderate traffic requires a fair amount of hardware and bandwidth. It also require full time programmers to maintain and keep the index fresh. Regular operation include fetching pages, indexing, updating and more. With our plan customers don't have to worry about the hard part of running a search engine.

We are offering search engine software , hardware, bandwidth, and maintenance support, so you can only focus on bussiness development and not technical.

Not to mention that it's a search engine that will grow with you, allowing you to easily add software components , plugins or build applications on it. So you get one powerful search engine.

Intranet Deployments (SiteSearch)

This hosting plan also apply for companies who want to index their websites.

Features

- * Flexible – Customizable.
- * Unbiased – Searches are not weighted on anything but the relevance of information.
- * Dynamic Page Summaries – Judge relevance of results more easily with dynamically generated snippets showing your query in the context of the page.
- * Cached Pages – View search results even when the sites are down via cached copies of pages included in the search results.

Build your own search engine

- * Explain Link – Displays an explanation of how page is scored.
- * Anchors – Shows the list of incoming anchors indexed for the page.
- * Advanced Search – Perform complex and sophisticated queries.
- * Clustering Automatically categorizes search results on–the–fly into hierarchical clusters, so users can find information easily.
- * Thumbshots – Did you know over 90% of users would like to see thumbnails in their favorite search engine? , with our custom search engine solution you will get this service free. Try here

A list of known file types we've tested to date and found work are:

- * Word
- * Excel

- * PowerPoint
- * RTF
- * Text
- * HTML Files
- * Acrobat
- * MP3

Spam Filtering Technology

Now ObjectsSearch clients have option to filter out their search results.

This spam–filtering technology is based on the Bayesian algorithm, as it directly relates to the Bayesian spam filters is been used in the ObjectsSearch Labs's search engine.

A Bayesian spam filter is a complex algorithm used in estimating the probability or the likelihood that certain content or material detected by Search Engine is in fact spam.

In its most basic format, the Bayesian spam filter determines if something "looks spammy" or if, on the other hand, it is relevant content that will truly help the user.

To a certain degree, the Bayesian algorithm has proven efficient in the war against spam in the search engines. Being `bombarde'd' by spam. Spam–filtering technology will protect the quality and relevancy of search results.

ObjectsSearch is still experimenting with its newly–implemented algorithm and that there are many important adjustments that will need to be done to it to make it more efficient.

How To Get High Rankings On A Major Search Engine

By Steve Pavis

If you want to have a successful Internet business, you need to have a good understanding of the surfing habits of your readers—and more specifically, how they find information on a major search engine.

Studies show that 85% of users rely on major search engine to find info. The most popular major search engine is the Google search engine. When they look for information on a major search engine, they type certain key words or phrases. You need to find the phrase that will lead them to you.

Almost half of all Internet surfers type several words when they look for information on a major search engine. They have learned that with the millions of websites listed on a major search engine, using key phrases rather than words will narrow down the search of that major search engine.

For example, someone who is researching on scrapbooking on a major search engine will probably key in "scrapbooking clubs", "scrapbooking contests" or even "free scrapbooking fonts". If you want to be on the top results of the major search engine, you need to contain these key phrases.

There are many companies that can give you a list of the most popular queries made on each major search engine. However, bear in mind that you don't want to use a key phrase that is being used by several websites, as that means you will be competing with all of them for good search engine placement.

Do a little research to find out how people will look for information related to your product, and how they would post this question on a major search engine. You should also consider a key word's common misspellings (e.g. scrap booking) as even the best major search engine will see it as a separate topic.

You should also submit your site to more than one major search engine. Studies show that 77% use several major search engine to research.

Plus the different major search engine have unique techniques for indexing sites, so your ranking on one major search engine will be different from your ranking on another major search engine.
