Camera Phone VS Digital Camera

By Robert Thomson

Cell phones with cameras are everywhere nowadays. It really makes us thinking whether we now have a mobile phone with camera or a camera with telephone capability.

What's up with mobiles?

The Sharp 903 cell phone now comes with a 3.2MP camera, the Sony Ericsson W800i and the N90 from Nokia Nseries both pitch in with 2.0MP (N90 has also got a Carl Zeiss lens and the autofocus). These phones have good enough quality for everyday pictures. And given the pace of development it is likely that the standard will only raise. Who would have thought that we would be talking of the music capabilities of the iPod phone, or anticipating the launch of the N91 from the Nokia Nseries with a 4 GB hard disc?

Why camera cell phone?

There are digital cameras capable of 10MP or more resolution, but who really needs pictures with such resolution? 2MP is enough for day to day usage and general printing purpose, and it ensures that images are not too large to be transferred to other devices. The picture quality of N90 from Nokia Nseries can match that of some lower end digital cameras. Cell phones can have files transferred the same way as digital cameras (cable, memory card and Bluetooth). The inclusion of MMS function in camera phones means that the images can also be directly sent to other phones and emails, which is not achievable with digital cameras. The major advantage of the camera cell phone over the digital camera is its immediate availability, the ability to capture that fleeting image without having to unzip a camera bag and fumble with settings. So you will not miss that precious moment again.

Professionals are up for the challenge

Five of the world's leading photographers (Juergen Teller, Jiancheng Dong, Nick Waplinton, Philip Lorca-DiCorcia and Raghu Rai) have taken up the challenge of camera cell phones. They have produced a stunning selection of professional images using the N90 from Nokia Nseries, see it yourself at seenew.com

Are you up for the challenge?

If you think you're pretty good with a camera, take a look at the competition that can also be found on

the site. Submit your shots taken with camera phone, and you could be assisting one of the photographers on a commercial photo shoot. Other prizes include the N90 from Nokia Nseries, two return tickets to be flown anywhere in the world and your winning images to be pre-loaded to future Nokia Nseries handsets.

Tips And Tricks To Buying A Digital Camera

By I Henman

Technology is changing fast and not everyone can adopt quickly and welcome the changes. Believe it or not, but there are those who have a problem accepting emails even today though it has become the primary mode of communication. The usage of PDA's to store memos and notes is even less. It comes as no surprise thus that buying a digital camera is gaining acceptance slowly. Most people still prefer a film-based model and sift over only if they have to.

Most people who plan on buying a digital camera start off startled as they see the picture quality it can give from someone else's digital camera. So they decide on buying a digital camera to get the same quality snaps. Plus, a digital camera is very convenient as there is no need for film rolls anymore. So remembering the rolls and what snaps are on them are on their way out. Storing conventional snaps can also become a problem as they tend to get lost and destroyed. Buying a digital camera solves all these problems.

So when you have decided on buying a digital camera you should start off by doing some research work. Try to read a few online reviews of user experiences to know about the various brands, their features, pluses and minuses. Before buying a digital camera you should know them and thus you will yourself know what you should go for. These online resources will also help you find the best bargains. Once you have gone through them, buying a digital camera would be a whole lot easier.

So first decide whether you are ready for buying a digital camera and then carry out the research before taking a final decision. You can start off by checking a few online shops, these usually offer great bargains. But which stores do you need to turn to? Are these stores secured for online purchases? Do some store reviews as part of your research before buying a digital camera. This will surely make your job of buying a digital camera much easier.

And once you have your camera and used it for a while, you will find that you cannot live without it. You are sure to wonder why you didn't decide on buying a digital camera earlier. Try out the various effects, settings and techniques and clean up your old pictures with the provided photo editing software. You are sure to have a lot of fun. It will add a new meaning to photography.

So don't just keep thinking about buying a digital camera. Go ahead and do it. A digital camera is convenient and the pictures are better as well. So what are you waiting for?
