1. Have you ever found an incredible buy somewhere and couldn't wait to rush home and call all your friends to tell them about it? It is such great news and you know it will save them a ton of money.
2. Or have you ever been warned about a sinister person lurking under someone's car at night waiting for their next victim to arrive? You are so concerned that you feel impelled to warn all your friends as soon as possible so they won't become a casualty because of lack of knowledge.

Well, if your answer is "yes" to either one of these questions, perhaps you can relate to what I am about to tell you...

You see, I've found the most awesome bargain since Alexander Graham Bell first invented the telephone! And I can hardly contain myself from sharing it with you because I know once you try it out, you are going to absolutely love it, and especially since it will save you a ton of money.

Well, here it is! Some ingenious person combined the features and convenience of the telephone with the power of the Internet, and came up with a computer phone. It intrigued me so much that I had to try it. And guess what? Now I am making all my phone calls from my computer! Plus, I have been pocketing almost 80% in savings after comparing the costs with what I was paying when using a traditional phone. It is a really simple concept too. How cool is that!

When I first tried the computer phone out, I found I didn't have a built in microphone on my computer. That was a bummer until I discovered a microphone for a computer only costs \$5.00 at a local store. And, all I had to do was plug it into the back of my computer so that I could talk. That alone was thrilling just from the simple fact that I am basically computer challenged.

## Can We Talk? I Mean Honestly? I've Got Some Good News and A Warning for You Too

Well, let me tell you, after I plugged that baby in and talked to a few people, I was off and running telling every friend I had about this incredible find! And now I am telling you too! You've just gotta try it! You are going to absolutely love it! I promise you!!

Even some of my friends on dial-up connections to the Internet were able to use it too!

I don't want you to become a casualty of computer phones either. So here's my warning...

I found out there are a lot of computer phone (VoIP) companies out there offering their wares. But along with that, I heard a lot of clients using their services were given a virus or worm, and some poor folks even had their personal and confidential information accessed by some unscrupulous hackers who sold it to other villainous individuals --- information like their social security numbers, their birth dates --- all the makings for your personal identity to be stolen.

Being the naturally curious person that I am, I wanted to find out how that happened. Here is what I unearthed.

Over 90% of the VoIP computer phone providers were operating on unsafe lines - the kind hackers can easily access. How so? Because these computer phone providers were operating from publicly open and interpretable industry standard codec (codes) and industry standard protocols (IP addresses) to lower their costs. And being publicly accessible meant that hackers were lurking nearby just waiting for another innocent victim to prey upon.

I know it is hard to believe there are these types of criminal entities out there, but unfortunately, the harsh reality is that there are.

So, now I am thinking - how can I protect myself from these pathetic misfits while I am using my computer phone. Guess what? I found out how! It was just a matter of finding a computer phone provider that did NOT operate on these publicly open and interpretable industry standards.

In fact, here is some more good news I want to share with you too.

I found a computer phone provider that operated on its own proprietary high-end encryption codec (code) hosted on its own proprietary patented technology. You want to talk about being optimally safe and secure...well, you've got it! Not only that, this one you can try out 7 days for free.

My thoughts are, if someone is so confident about their product that they would let me try it for free first - before even deciding if I wanted to purchase it, then they must have the real deal.

Personally, since I have been using the computer phone, I have kept in closer contact with my family scattered throughout the country, and I have made quite a lot of new friends in many other countries - all of which I talk to as long as I want absolutely free. Way too cool !!

Well, these are my great finds and warning for you. As an update: I have since become a computer phone solutions provider and can promise you that these computer phones are absolutely amazing in

quality and safety, and are light years above the "competition" if you can call it that.

Why not try one out for yourself? It is free and you will have nothing to lose. Actually, you will have everything to gain, including putting some of that hard earned money back into your own pocket.

Here ya go - try it out 7 days for free at <http://www.whypay4calls.com/gtp/to.pl?l=ART-FREE>

Oh, and I almost forgot. I have put together a little Report entitled "Why Hackers Love Computer Phones - Shocking Inside Information" which is absolutely free also. Here's the website for that: <http://www.whypay4calls.com/gtp/to.pl?l=ART-04>

well as many other nuances of VoIP technology.

## **THINGS TO TALK TO YOUR ROOMMATE ABOUT,BEFORE YOU MOVE IN**

**By dan the roommate man**

1. Who is going to bring what things to the room? Who is going to bring the television, VCR, refrigerator, etc.? How many of each of these do we need?
2. When will you be moving in? Will these be different times? Who is going to help you move in? Do we need to alternate times?
3. How will the room be decorated? How many things do we need to have to have our room be 'home like?' Will this only be one person's decorations?

When you move in, take time to talk to your roommate about:

1. Your sleep habits. Are you a heavy or light sleeper? Do you enjoy early or late nights? How about naps?
2. Your study habits. When do you study? What kind of noise can be in the room while you study? Do you need advance warning?
3. How clean are we going to keep our room? When will we clean? Which areas can one another clean?
4. Use of possessions. Can everything be shared? Which items can guests use?

## Can We Talk? I Mean Honestly? I've Got Some Good News and A Warning for You Too

5. What about friends coming over? How often can people spend the night? How many friends can be over at once? Do you need advance warning?

6. Security. When will the room be locked? Who will take responsibility for these times?

7. Communication. How will we communicate to each other when there is a problem? What about phone messages? Who can use the phone, computer, etc?

8. How quiet and respectful of each other are we going to be when one of us is sleeping or studying?

Talk to one another about:

What do you do for fun.

Where you are from.

How you grew up.

What your favorite things are.

What your major is.

What your career goals are.

What some of your likes and dislikes are.

What things you each can do to make the living environment great for both of you.

Rules for good discussion:

Focus on the behavior– not your roommate.

"Own" your feelings. No one can make you feel something– you choose to feel that way.

Try and listen to your roommate's perspective. Let him/her speak without interruption.

Make sure you understand what is being said. Never assume anything.

Remember that this is not a win lose situation. The goal is to find some kind of compromise with which you can all live. Try to be as objective and rational as possible.

If emotions are running too high, take a break and talk again later.

Try to get to the heart of the problem right away. Don't waste time on the little details of the concern.

Can We Talk? I Mean Honestly? I've Got Some Good News and A Warning for You Too

Try to remain calm.
