Counterfeit Love

By Joyce C. Lock

Counterfeit Love by Joyce C. Lock

Some form of the word `love' exists in scripture 543 times and is, conceivably, one of the most abused, excused, and misused words in modern lingo, today.

I love your style. I just loved that show. I love the way you fix your hair! I love ice cream. Oh, I love what you've done with this room! I love you in that dress. I love it when you make me laugh.

I LOVE YOU ... unless I get hurt ... just don't ask me to help ... only when my needs come first ... though, not if it means listening to you ... barring when I can take credit ... when it's convenient ... if you love me ... as long as you do what I say ... but not your children ... unless you get in my way ... until I think of some good jokes at your expense ... except you put on a few pounds ... omitting when friends are around ... whenever it benefits me.

Let's make love. If you love me, you'll do it. Never mind that I'm sleeping with someone else, it's you I love. You're just stupid. You know I love you.

I love you, but I won't forgive you. I'm sorry for hurting you, again, but you know I love you. I told you once that I love you. That ought to be enough. What do I have to say to make you believe me? I (bleep, bleep) love you, all right? If I say I love you, then I love you. I can see others and still love you. When you measure up to my expectations, then, I'll love you.

Some speak most eloquent words of love. Fewer show it in their lives. But, whatever they speak, actions speak even louder.

Surely, God must prefer to disassociate from situations wherein people misuse words that describe His character. And, wherever He isn't, it isn't love.

It is impossible to love until we (know God and) begin to love others as He loves us, because God is love and it's His Spirit that loves through us (1 John 4:8, 12b-13). Anything less is counterfeit.

Joyce C. Lock is a published author, poet, and columnist. In addition, she founded and maintains the e-mail ministries "Heavenly Inspirations" <http://groups.yahoo.com/group/HeavenlyInspirations/> and "Share a Smile" <http://groups.yahoo.com/group/smilesharing/>. Joyce's writings encourage us in our relationship with God and each other.

Money Counters - Simplifying Money Management

By Barney Garcia

When you hear the word "money counter", the first thing that comes to your mind is someone who counts money. Money counters do count money, but they are not persons. A money counter is a machine that can count, add, stack, and detect money. Money counters are used by banks, arcades, casinos, restaurants, multi national companies and any firm that handles a lot of cash or change in a day.

Money counters are used all across the world to increase speed of counting cash, eliminate errors and simplify money handling. There are machines that can handle international currencies. These machines can detect the currency from various countries and display their values.

Money sorters come in all kind of shapes, sizes and types, as well as configurations and price ranges. There are simple banks meant for children that help them count their allowance and there are complex counters that place coins into rolls and tally the exact amount. There are other money counters that count and sort cash as well.

Counterfeit Detectors

A counterfeit detector is a built-in setting in a money counter that detects fake currency from the rest of the bundle. If the currency is counterfeit, an alarm alerts the user. A counterfeit detector has the following components

- A magnetic detector scans the bills for the magnetic component that is used while making bills. In case of US bills, the bills when passed over the detector will produce a positive magnetic response.
- A magnifying detector is used to detect and check micro printing, fine-line printing pattern, serial number, inscribed security thread etc that is customized on various currencies. These cannot be seen with the naked eye. Hence magnifying detectors are used.
- A watermark is a specialized marking found on the US currency. It is produced by applying pressure on the bill mold. Holding the currency against a UV bulb will detect the quality of the watermark. A weak watermark means fake currency.

Counterfeit Love

· Every US dollar bill has unique color shifting property on its lower right hand side corner. If you focus the bill on the lighted reflector, that part changes color from green to black. If there is no change in color, then it means the currency is counterfeit.

Use counters to improvise your money management mechanism!

Barney Garcia writes about money counters, bill sorters and coin counters.
