Debating on .Net Vs J2EE

By Balaji

Debating on .Net Vs J2EE by Balaji

Debating on .Net Vs J2EE

When Microsoft launched .Net, IT arena was flooded with questions and debates as to which technology is superior to other. The .Net vs. J2EE debate is still around. Both .Net and Java 2 Enterprise Edition (J2EE) are development platforms to create web applications.

However, the developer will prefer .Net Framework because it takes very short time in it to develop web applications. In J2EE, if any modification is required in Enterprise Java Beans (EJB) the entire application had to be repackaged and redeployed. In some cases, you may not repackage the application but it is necessary to redeploy the whole application.

Another advantage of .Net over J2EE is that all the components of .Net are in compact. In J2EE there is hardly any ease to choose and pick a component. The design patterns of .Net are very user friendly comparing to J2EE. Moreover, with regard to functionality or performance also .Net overtakes J2EE.

The biggest advantage of J2EE over .Net is cost. J2EE is favored over .Net when applications have to be run on systems other than Windows platform such as IBM Mainframe and Sun Solaris. Even in organizations where there is already a large implementation of UNIX platform, it is most likely that the organization will prefer J2EE. Moreover, organizations, which already have in-house skills in J2EE development will most probably, favor J2EE. But soon this picture is also going to change with Microsoft launching Common Language Runtime (CLR) engine for all the platforms. At present CLR engine works only on Windows platform.

.Net platform now support over 20 different programming languages. Moreover, web services that is going to be the significant part of any application–development environment is easy, fast, and cheap to develop and deploy in .Net rather than J2EE. The open standards for web services such as eXtensible Markup Language (XML), Simple Object Access Protocol (SOAP), Universal Description Directory and Integration, and Web Services Description Language (WSDL) favor .Net than J2EE

Deflate Objections In 15 Seconds

By Joseph Plazo

Does this symphony sound familiar?

You are too!

Am not!!

You are TOO!

AM NOT!

YOU ARE ALSO!!

AM NOT!!

Familiar? It's how kids argue. I'm sure you've tried this mode of arguing decades back.

Children, when pointed out that they are "xxx", tend to retaliate that their accuser is also "xxx" The accuser then balks, because people hate having their arguments thrown back at them. It's human nature and this demonstrates the Reflexivity Principle of Argumentation.

By applying a belief statement back to the person asserting it, we test the applicability of that belief within an equitable context. By equitable context, I mean that what's good for the Gander should also be good for the Goose. This determines the universality of the statement. If, by throwing an argument back to its issuer, we observe a resistance, then this could indicate a presence double standards. This surely makes the argument IRRATIONAL, and NON–UNIVERSAL.

Let's see this in play.

She says, " You're always with your officemates. Obviously you don't like me anymore"

To counter this with Reflexivity , you apply her argument back to her by saying, "My dear, you spend at least 3 hours a day with your friends after work. Does this imply that you love me less now as well?"

She will then see the irrationality of her argument.

Let's try another.

Mark says, "The Bush Administration wastes so much time bickering, debating and arguing. Obviously this country is going nowhere. Such a waste of time!"

So you come to the good ole US of A's defense by saying, "I see.... so shall I assume that your business will never prosper either? Your Board spends a lot of time deliberating and debating. I observed that you, as Chairman, even seem to enjoy this and you goad them on! Now despite all that bickering, your company grows 10% per annum. Mark, I'm sure you're already aware of the value of

debate. Healthy deliberation illuminates multiple avenues of action. That's what your Board does. That's what the Bush administration accomplishes."

Okay, let's put this to practice. Someone brave, come to the front; volunteer 10 arguments.

Then let's have someone else come up with ten counter arguments using this principle.

Have fun!

A master of manifestation to his associates, Joseph R. Plazo offers intense executive coaching so people can find jobs and build careers.
