**Definitely get ride of Acne**

**By Martha Fitzharris**

Perhaps, you may have had experienced facial skin problems for the past weeks or currently agonizing over them. If you do, don't despair. The world has not yet turned its back solely on you and the fact is... you are not the only one.

Practically 17 million people are afflicted with this malady. It may not be fatal but the disruptive psychosocial consequences can surely affect the way you see yourself and others towards you.

BIO SKIN CARE cream understands this, that is why it came up with a whole new revolutionary product that combines only natural ingredients that not only effectively wards off unexpected guests away from your skin, in the case of bacterial, and other impurities, but considerably improves the overall condition of the skin especially for those who have severely suffered from them. The good news is that it works on all skin types like no other skin product in the market.

This ultra-sophisticated product simply works in two ways.

- It takes away impurities clogged in those tiny skin pores to help the skin "breathe";
- It helps to "loosen up" the already infected skin cells to give them time to rejuvenate and eventually prevent the condition from coming back.

It should be emphasized that the use of Bio SKIN CARE cream coupled with proper skin care regimen is the key to achieving and maintaining a perfectly radiant skin

The skin can be compared to your lungs. If you block the gases coming in and out of its canals (bronchioles) by putting something along its way (impurities that causes clogs), it eventually collapses and suffers the fury of microbes. The infection will give rise to various problems by feasting on nearby healthy cells as well.

Pimples have many causes and several factors which influences its development. Some of them are the following:

## Definitely get ride of Acne

– Hormonal concentration fluctuation - Changes in the concentration of the hormone Androgen (which is a male sex hormone) that causes the sebaceous glands (oil glands) from producing more oil which empties on the surface of the skin.

– Propionibacterium acnes, a bacterium which causes acne usually thrives on this region and feed on the cellular debris together with oils left by the secreting skin cells. These microbes often gets into the follicle (canal) of the pilosebaceous unit (a structure consisting of sebaceous gland, narrow canal called follicle and thin hair) and produces irritating substances that encourages white blood cells to concentrate on the region and begin the inflammation process.

The good news is that BIO SKIN CARE possesses antimicrobial properties which hinders bacterial multiplication to progress and kills them in the process.

· Pollution and Humidity- Environmental irritants such as car exhausts, dust, smoke and temperature

are perfect sources to clog those skin pores and prevent them from "breathing.". BIO SKIN CARE cream, through its active cleansing agent, helps in the removal of these fine particles blocking those openings and interrupt inflammation to start or aggravate.

· Genetics -family history provides vital information if an individual will develop this disfiguring condition. Families who manifested this skin condition will most likely pass that attribute to their filial lineups. Though incurable, BIO SKIN CARE cream reduces the chances by which acne develops due to environmental conditions with its anti-inflammatory and rejuvenating components.

BIO SKIN CARE beauty care innovations provides valuable opportunities for you to get rid of those unwanted blemishes, inhibit their progress and restore damaged skin cells, just like they were before or even better!

a website offering a

new biological natural skin care product that activates skin renewal for a healthy skin.

**Don't Spend Money on Acne Remedies. Fight Acne Naturally!**

**By Scott Green**

Acne is commonly a skin condition that is seen as whiteheads, blackheads, pustules or infected and inflamed nodules. Acne often is found on a persons face, chest, neck, and back. While many acne types usually affect the teenagers, various acne conditions are not restricted to a particular age group;

## Definitely get ride of Acne

even adults in their late 20s or even well into their 40s - have the possibility to also suffer from acne. Though acne is not life threatening, it can cause unwanted permanent scarring and cause emotional distress if it is not treated properly. People with Acne problems often tend to be more self-conscious about their appearances when having outbreaks or blemishes.

Instead of having you dig deeper into your pocket for various types of expensive Acne Treatment remedies, you should attempt to fight acne naturally by avoiding your pores to get clogged. For many people with acne outbreaks, it is about avoiding the common acne outbreak. Just by following some of the simply steps listed below, people that often have outbreaks can dramatically decrease their chance of another acne outbreaks:

By not touching your face with your hands, including popping the zits.

By washing your skin with a mild soap, acne cleanser such as Proactiv Solutions

By avoiding stressful situations

By allowing your skin to breath; wear loose clothing

Scott Green has extensive experience in the Dermatology field and shares his knowledge openly on his very resourceful site
