Digital Photo Printing - The New Revolution

By Carl Walker

Digital photo printing has revolutionized the way photo printing is done. There is no use if you keep storing all the images you shot on your digital camera on the computer hard disk or on the memory card. To enjoy them more you need to print out those photographs. It will be a great idea to see all those fantastic digital pictures as hard copy or printed photographs. Let us now see how we could go about digital photo printing.

The fun part of digital photo printing is you can do it at home! But before that you need to consider the following that will get you started:

First buy a good printer. You don't need more than ink jet printer - at least six colors to start with.

Secondly, buy photo-editing software. Look for simple software under \$100 that has more automatic features like color correction, brightness control; auto focus etc. next step is to get good quality paper. Don't compromise on this; invest in thick glossy paper which will give you high quality prints. Another important thing that you need to consider is the DPI or dots per inch. For normal 4 by 6 inches prints 300 dpi is adequate. For 5 by 7 or 8 by 10 you can go up to 600 dpi. Depending on your printer and software you may be able to print up to 1200 dpi, which is more than adequate.

Digital photo printing requires few components that make up the total process of printing. There are many good printers designed exclusively for the sake of printing digital camera photos. These printers are sold along with cartridges and photo papers and not meant for printing everyday document. These digital printers can transfer the images from your digital camera onto photo paper with great degree of quality and perfection. Generally the ink and paper are sold together when you buy a good printer and it will cost roughly 30 - 70 cents on an average per print. The best part is the printers themselves have become inexpensive and very affordable.

Another advantage in digital photo printing using these inexpensive printers is you do not require a computer for their functioning. You can print directly from the digital camera. Some cameras also enable the users to connect directly to a PictBridge compatible printer using USB cable. Some printers include memory card slots, which make it really simple to print images direct without even using up the

battery in your camera! Few examples of these great printers are: Canon's Selphy DS700 and CP330; among many others.

Hope you got some good idea about the various digital photo–printing devices. Make sure that before starting to use, play around with the settings take a few test print outs on ordinary paper and then migrate to expensive photo paper. And most important don't forget to have fun while you enjoy the digital photo printing experience!

Digital Photo Processing Online – How Easy Is It?

By Mindi Haehl

For Pick–up or Mail–order

As the online digital photo revolution evolves we see changes happening so rapidly that it is hard to keep up. We now have the option of uploading our pictures to a professional photo developer who can print crystal clear digital photos. Locations are popping up everywhere that will do this photo printing and are in your area. They are sometimes difficult to find and are sometimes where you would least expect them.

The days of printing from home are over

We have all been disappointed with our personal photo printers and have long since given up printing them ourselves. We have waited for a long time just looking at our photos on computer screens, palm pilots and cell phones. Now with faster internet connections sweeping the country it is easy and fast to upload our photos to a professional developer for processing and printing that is of very high quality.

Easy uploading

By putting your photos on your computer the usual way, with a USB cable or plugging your memory card directly to your computer, you can have your photos ready for uploading. Uploading is simple. from the website where you are doing the uploading you simply browse to the files where all of your photos are saved and select them one by one or as a group depending on the site that will print your photos.

Pick–up at the location is available everywhere

Picking your photos up at the location is available everywhere. The beauty of this is that 1 hour developing has now paved the way for people to want their photos quickly. With many photo

processors digital photos can be available for pick-up in less than 1 hour.

If you don't want to leave the house mail delivery is easy and reliable

For those of you who are pressed for time running to the location to get photos is not an option no matter how fast they are printed and made ready for you. Prints can be mailed to you in a timely manner and is often FREE. This is a great option and the cost is even better. It is like printing your pictures to your mailbox.
