Do You Get More Spam Than Real Email?

By **Matt Garrett**

The unsolicited junk or bulk email that you receive is known as Spam. Spam is a very serious

problem the people have to deal with daily. Sometimes the junk emails exceed the regular email messages that we receive in our email account. Spam filter can be a solution for you to get freedom from Spam mails. There are different types of software to keep out the Spam emails from your inbox. Spam filters can monitor the emails that come in your inbox and prevent any Spam mail from entering in to your inbox.

The Spam email that you receive is due to the inappropriate usage of mailing list. The mailing list consists of email ids of different people and all of them can be flooded with bulk or junk emails. Many companies send out the Spam email messages to a large number of people who do not ask for such messages. Spamming is considered to be very bad netiquette as it amounts in violating a person's privacy. Netiquette demand that no email id can be used without the user's permission.

Many Spam filters are designed to help people who are constantly bombarded with junk or bulk mails. Spam filters make use of filtering technology to filter the contents of the incoming emails. Spam filters can effectively help a person by sorting out these types of incoming emails.

Different types of Spam filters can be helpful for controlling spam. Content based Spam filter is one type that can be used by you. The filter scans the content of the email, and searches for tell tale signs for Spam in the message. Content based Spam filters have however not been very effective in controlling the bulk or the junk messages. The main reason for this being that the spammers had devised ways and means by which they can communicate their message despite the presence of such filters.

Do You Get More Spam Than Real Email?

Spam filters that are prepared these days are designed to give advanced protection against unsolicited emails and spammers. Bayesian filter technology is another effective way of controlling these mails. Bayesian technology is not like other filtering methods that search for Spam identifying words in the header and the subject line. The Bayesian filter uses the entire perspective of an email when it looks for characters or words for identifying a Spam. Another feature of Bayesian Spam filter is that the more it analyzes the incoming mails, the more it learns to identify Spam mails.

Spam mails can sometimes bombard you in such a manner that you may end up receiving more Spam than the regular emails. Most email service providers have Spam filter software enabled in their sites. All you need to do is select the options of setting the Spam filter for your emails according to your liking. You can mark the sites from which you want to receive or not receive mails in your inbox. Setting the options for blocking the bulk or the junk mails is entirely your prerogative.

A Quick Look At Email Spam Filters

By Oliver Turner

You must be eagerly finding for a way out to stop receiving Spam mails in your inbox. Take a quick look at email spam filters to get some idea on how to check spam. There are a number of email spam filters that you can use in your computer. For official purposes, you have anti server software spam where the spam filter is located in the server level to trap all email spam. They prevent them from reaching your inbox. The email spasm not only slows down the performance of the server, but also occupies a lot of storage space. Emails are the easiest and the best way for these viruses to spread.

Working of Spam Filters

Anti spam software and anti spam solutions are essential to aid you in getting a clean inbox. The server spam filter or anti spam server is a software application that scans all the incoming email messages. With the help of their configuration, they identify Spam and prevent them from reaching your inbox. The spam mails not only eats away the storage space and make selecting your personal emails difficult, they also can contain viruses. Using anti spam filters is necessary as it saves both your time and money. But even when you are using anti spam filters, it is recommended to check the messages just to make sure that no personal message has been marked as spam. Even the server spam filters marks email as "false positive" to those that are identified as spam, but in reality they are valid messages. There are various anti spam programs that identifies Spam and sends it to the junk mail folder.

Not all spam filters work in the same way. Some of them are pre programmed where the know spammers are inserted. They accordingly block them. Some of the programs filter the emails based on the keywords used in the mails. Some of the email spam filters are configured and you can easily customize it or the network administrator can also customize it according to the requirement of the
