**Dog Health Checkups Are Essential For The Health Of Your Pit Bull Terrier**

**By Tim Amherst**

All responsible dog owners know that when your pet shows signs of feeling ill or gets injured that it's time for a visit to the veterinarian.

Naturally, it is important to take your pet to the vet when there is a problem, but many people forget the importance of taking their pets to the doctor when they are healthy! Taking your Pit Bull to the vet for routine well check-ups and vaccinations can prevent many serious medical conditions, and treat others early on before they have a chance to progress and endanger your Pit Bull's health.

No matter how good the care you provide for your Pit Bull is, you may miss early signs of disease that the vet would be able to spot at a routine visit. Catching many diseases early can help prevent them from becoming major health issues. Animals often try to hide any sign of illness, because it can be a sign of weakness to other animals. Your Pit Bull's ability to hide symptoms makes them that much harder to catch early on.

Taking your Pit Bull for preventative care can often save you quite a bit of money. Diseases left untreated can be very costly to treat, amassing tremendous bills along the way. By early diagnosis and treatment, you can prevent it from ever getting to that level, therefore saving yourself a lot of money.

By having routine visits with your Pit Bull, your veterinarian will learn what is normal for your dog, as no two animals are quite the same. In learning what is considered normal for your Pit Bull, your vet will be better able to tell when something isn't quite right, and provide prompt medical treatment. Your vet will keep records of every visit, so that he can refer back to them, which will help in treating old problems, and diagnosing new ones.

At your yearly well checkup, your vet will also check to see if your Pit Bull is getting the right diet he needs. The vet will suggest changes to help if your Pit Bull is overweight, or malnourished. This can be vital to your pet's health. Obesity is a major problem that can cause your pet to suffer from a variety of medical problems. It is also crucial that he get proper nutrition, and your vet can prescribe supplements as needed.

## How To Spot A Great Pit Bull Breeder: 7 Signs Of A Good Dog Breeder

**By Tim Amherst**

If you're searching for a Pit Bull terrier puppy but are unsure about where to look for one, this is an important article for you to read. Many people are afraid to ask questions when they speak with breeders and this is the first hurdle that you need to get over. It is vital for you to ask questions when you are speaking with different breeders. Below is a list that I've created of some very important things you should look for and ask of the Pit Bull terrier breeders you're considering doing business with.

1. Does the breeder breed several different types of dogs? This can often be a red flag and you should try to stick with breeders who only work with American Pit Bull Terriers.
2. A responsible Pit Bull breeder will be able to tell you the negative characteristics and health issues of his breeding line and also what he has done over the years to improve that aspect of his dogs.
3. Can the breeder thoroughly explain to you how he selects dogs for breeding and what characteristics they will most likely throw?
4. How often does the breeder have litters of puppies? Breeders who have many, many litters each year may not be a good choice.
5. Is the breeder involved with Pit Bulls on a larger scale than just breeding them?.
6. Does the breeder keep in touch with those who have purchased puppies from him? Breeders who sell pups and then have no idea where they end up should be avoided.
7. Where does the breeder keep his puppies at before they are sold? Are they well socialized?

There are many other things that you could ask the Pit Bull breeders that you speak with, however the above list will give you an excellent start and greatly improve the chances that you'll end up with an excellent Pit Bull terrier puppy.
