Evaluating snow blowers to meet your needs

By Wildfire Marketing Group Content Development Team

You've got snow, lots of it, and you don't want to spend all day shovelling it. With all of the snow blowers on the market today how do you choose the best one? The short answer is that there is no such thing as "**the best snow blower**" because like any other tool, it's a matter of choosing the most appropriate one for the job. Snow blowers can range greatly in size, capability and price so it's important to choose the snow blower that is best capable of handling your needs. Anything smaller will cause you to do more work than necessary and anything larger will cause you to spend more money than you really need to.

One of the most popular brands is

Torro snow blowers

because of their durability and dependability. They come in a range of sizes offering both single stage and two stage models.

If you're looking for a long-lasting piece of equipment, a

Honda snow blower is the choice for you. In fact, with regular maintenance, there is no reason that your snow blower shouldn't last and run well for at least 20 years. Like the Torro models, Honda snow blowers come in a wide range of sizes. Because of their quality, they are priced slightly higher but the investment is well worth it.

For those of you that get a little less snow, a more economical model may be more appropriate. In this case, the

MTD snow blower is right up your alley. MTD is

the parent company of snow blowers including White Outdoor, Yard Machines, and Yard Man. While the investment to own one of these snow blowers is smaller than that of Honda or Toro, it is still a great value for the price.

Tricks For Removing Snow Easily Using Snow Throwers

By "A.Caxton"

Snow throwers will allow you to cozy up inside your house When it snows, it is the worst time for men folk of the house. (I know, I know, it is not politically correct to say this, but give that guy some credit) while the government and municipal corporations try to keep the highways and streets clear of snow. The snow removal from the front of the house to the gate is the family responsibility. To ease this work we have snow throwers that can do your job in a jiffy, allowing you to go back into the house quickly.

Single Stage Snow Throwers Are Gas Engine Operated

A snow thrower can be single stage or two stages. A single stage snow thrower has an auger made out of combination of metal and plastic or hard rubber. The Engine drives an auger through a series of gears. This auger cuts through the thick coat of ice by chipping, collects it, and then directs it out of the machine with some force. This way the ice on the ground is cleared from the driveway. In a single stage thrower, the machine is self-propelling as it rides on snow. Single stage machine clear a width of 12' to 22' and multiple passes are required to clear the snow in the driveway.

A Two-stage Machine Is More Powerful

A two-stage machine has a pump in addition to the auger in a single stage machine. The ice churned by auger is sent to pump. Additional force imparted to snow by the pump makes it possible for the machine to throw the cleared snow to greater distance. Distance can be up to 45' in some cases. Children enjoy this and with a double throw machine, laughter of children comes free. (Keep your children out of the landing place of snow) This makes the work of clearing snow easy and enjoyable. Double stage machines clear the width of 2' to 3' in one pass and this reduces time required for clearing

Tricks For Removing Snow Easily.

The snow can be cleared easily by sprinkling salt over the snow. (Check with authorities though, before sprinkling salt on snow to check if it is permitted).

Evaluating snow blowers to meet your needs

When you go out in the snow for clearing it, use layered clothing instead of a single layer of thick clothing.

Take precaution, and do not to slip on the hard snow. There is a possibility of landing on the head. Use spiked shoes if possible.
