Lower Body Exercises For Beginning Bodybuilders

By Rick Mitchell

Lower Body Exercises For Beginning Bodybuilders by Rick Mitchell

The muscles of the lower body can be divided into five groups:

3. Gluteals – these are the muscles that make up the buttocks.

5. Calves – these are the two muscles found in the lower leg.

Exercise the right way – the leg press

For beginners these muscles should be exercised as follows:

2. Leg extension – 3 sets of 10–15 reps. This is a useful exercise for adding definition to the quads.
3. Hamstring curl – 3 sets of 10–15 reps. This exercise isolates the hamstrings.
4. Standing calf raise – 3 sets of 10–15 reps. This exercise works the gastrocnemius muscle.

Day 1: Biceps, Back, Abs

Day 2: Hamstrings, Shoulders, Abs

Day 3: Quads, Forearms, Calves

Day 4: Triceps, Chest, Abs
