Female Pattern Hair Loss - It Depends On The Genes

By Ash R

Female pattern hair loss is very common nowadays due to hectic schedules and stress. Stress is

the main cause of female hair loss. Women rarely become bald, but hair loss is common. If more than 100 hairs falls from your head while applying oil or when you shower then you need to take proper steps to control hair loss.

Men usually become bald if their hair becomes thin, while women do not completely become bald. It is very rare and if it happens then it could be due to genetic factors. Women could lose some hair or sometimes the hair becomes thin which could be treated if proper care is taken or by consulting a hair specialist.

Androgenic alopecia is the most common type of hair loss in females. If lots of hair falls in a day and if you feel your hair is becoming thin then it is the perfect time to visit a dermatologist. If your parents were bald then the chances of you becoming bald is more. Hair loss or balding depends on the gene of the parents. Female hair loss could start at puberty and it is mainly due to hormonal imbalance. Women could also lose hair once they discontinue birth control pills, or even when they are pregnant. Physical and emotional stress could also cause hair loss.

There are various medications available for female hair loss. Homeopathic, ayurvedic, allopathic medication can be bought from stores. There are many homemade remedies, which would help in gaining hair and also thicken hair. While going for a treatment or hair restoration surgery it is advised to take professional advise. Consultation with dermatologists would help in determining the root cause of your hair loss. Around 25 million American females are affected with this type of hair loss.

Female Hair Loss Treatment And Information

By Paton Jackson

Did you know that female hair loss is part of the lives of more than 25 million women in the United States alone? Most of them are not using any female hair loss treatment and only few are aware of the existing hair loss treatments. In almost all the cases Female hair loss could be avoided, stopped and new hair growth could be stimulated.

Female pattern hair loss is similar to what is known as the "male pattern hair loss" for men. It is caused by an increasing amount of a chemical called DHT which usually occurs in the menopause age. As opposed to men, women usually suffer from thinning hair around the forehead and crown of their scalp, and not a complete baldness.

There are several available treatments for female hair loss of this kind:

Natural female hair loss treatment - There are several natural products that showed good results in stopping female hair loss like Advacia and Revivogen. These products are made up of hair growth vitamins, herbs and minerals and have no side effects.

Female hair loss products - The most popular hair loss product for women is Rogaine. Rogaine is the only FDA approved female hair loss treatment. Its' main component is called Minoxidil which is a DHT inhibitor.

Other less common female hair loss treatments like wigs, hair thickeners and hair transplants are not recommended.

Another kind of female hair loss is a temporary hair loss. This kind could be a result of metabolic problems during pregnancy, a severe stress condition, chemotherapy, high fever or infections. The treatment in these cases would be stopping the medical problems as soon as possible. This would also result the hair regrowth.

If you do not suffer from female hair loss we congratulate you and advice you to use regularly a shampoo, a conditioner and moisturize and to maintain a healthy diet. If you start losing your hair do not ignore it. You can stop your hair loss. Good luck.
