Fountain of Youth, The Special Properties of Water

By W. C. (Bill) Wernet

Fountain of Youth, The Special Properties of Water by W. C. (Bill) Wernet

It wasn't until the first half of the 18th century that water was even recognized or considered an element, but a compound. It was not until the first half of the 19th century that water was found to contain deuterium. This substance is said to have been put there several million years ago by a radioactive cloud our Earth passed through. In fact, current research is under way by the scientific community to determine just how much this element is the cause of aging. It was not until 1951 that a U. S. chemist discovered tritium oxide in water. The continuing study of water has revealed another interesting fact, when it went through this cloud, it changed our water. A French physicist, A. Bovis, quantifies or measures how positively or negatively charged a substance such as water is. For living organisms, the key reference point on the scale is found at 6,500. From 0 to 6,500 the charge is in the NEGATIVE range, or life detracting; while above 6,500 the energy gradually becomes more positive, or LIFE ENHANCING. For humans, the desired minimal energy is found between 8,000 to 10,000, or slightly positive. The Earth itself creates energy in the 7,000 to 18,000 range. This positive radiation is necessary to the maintenance of life on Earth. In the past two decades, scientific research has produced some startling new information. Water is not just some simple liquid that we happen to drink. Scientists such as Dr. Jacques Beneviste, French biologist; Dr. Wolfgang Ludwig, physicist with Temple University in Philadelphia; Dr. Enzo Ciccolo, biologist with the Cooperative Nuova in Milan, Italy; Dr. Horst Felsch, director of the Civil Environmental Laboratory in Fieberbrunn, Germany; and Drs. Engler and Kokoschinegg have performed experiments with water and have arrived at several special conclusions.

THE IMPORTANCE OF SPIN

Scientists have discovered a direct correlation between the Bovis scale and the direction of spin displayed by an atom or molecule. Atoms registering in the negative Bovis range spin to the right, or clockwise. Atoms in the positive range spin in the opposite direction, to the left or counter clockwise. Examples found in nature of this spin property include our cellular DNA, which is in a left turning spiral. In contrast, cancer cells are in a right turning spin. Every atom, molecule, or substance has its own unique oscillation pattern or vibration, which can be measured in electromagnetic wavelengths (Ciccolo, "Domenica del Corriere", February 18, 1988) (Benevist).

Fountain of Youth, The Special Properties of Water

(Water is a carrier of information. As a solvent it is best-known conductor of vibration, with information transfer possible without direct contact. (Ciccolo) (Water possesses the ability to store information that has been impressed upon it from a given vibration for long periods as can be measured by specific electromagnetic wavelengths found in water (Engler and Kokoschinegg, 1988) thus even after harmful physical substances are removed, their negative energy vibration patterns or "signatures" still remain which can be traced back precisely to the original substances. (Ludwig) (Beneviste, in "Natur-Wissen") (Water can transfer such information from vibration patterns, or "memory" to other systems, including living organisms. (Ludwig) (Felsch) (Water revitalization allows water in a higher vibration state to transfer or share its higher frequencies, which acts to balance out low energy and negative information. (Ciccolo) (Water can retain the vibration memory of a substance even after it is diluted beyond Avogadro's number, where no physical traces of the substances remain. (Beneviste) (Water quality

can also be evaluated by the amount of ultra-violet light it absorbs. Poor quality will absorb higher amounts of UV light, while good quality water absorbs low amounts. (Ludwig) (Water, the minimum specific warmth and the maximum structural potential of water is measured at (37.5C) or the normal human body temperature (98.6 F). This finding indicates that water at this temperature is at a maximal structure point to acquire a large amount of information. (Felsch) (Engler and Kokoschinegg, 1988) (Water even when "cleansed" of contaminants by purification methods, still retains the vibration memory left from these contaminants, and their unhealthy informational messages can then be passed along into living organisms such as your body. These unhealthy messages can induce stress in the body, as it must try to compensate and adapt to all such messages it receives. Chronic stress can lead to conditions ripe for degeneration in the body. (Water that has been revitalized reduces the endless flood of low energy, negative information that inundates the body from typical water. The human body may be uniquely susceptible to memory informational capacity of water in view of the (37.5 C) (98.6 F) factor. Thus, water positively energized has the best potential at this temperature to spread its "good news" throughout the body. Conversely, negatively energized water can spread its "bad news" with unfortunate efficiency. (Felsch)

WATER THE CONNECTION

What does all this have to do with your tap water? The average tap water measures in the 3,000 to 4,000 Bovis, or negative range. Although bottled waters have been measured up to 5,000 Bovis, the water is still negative. Why is this? It is now understood that water can be damaged by several factors such as: the pressure in pipes, the pressure from water pumps, straight-line water pipes or conduits (remember in nature water curves or spirals), (not to be confused with the corollas effect), exposure to negatively charged chemicals, heavy metals, or other contaminants. These factors combine in telling loss of charge, or vibration rate. In the larger environmental picture, imagine what happens as we release more contaminated, de-energized water and other pollutants back into our groundwater system. As these elements are released the groundwater quality decreases; then we reuse it, then recycle it back more depleted, into an increasingly negative feedback loop. It is a known fact that the best water comes from Artesian springs around the world.

THE PX ESSENTIAL ENERGY WATER SYSTEM was discovered in 1995 by Manfred Bauer, a German scientist. Manfred developed the process to change ordinary water from a negative reading to an energized, positive reading. He now produces water and products capable of producing positive

Fountain of Youth, The Special Properties of Water

water with a reading as high as 2.5 million Bovis.

Without good healthy water, no plant or animal can survive. Our bodies crave healthy water until the day we die. Currently our planet contains water that will sustain life, but not prolong life or promote a healthy, vital life. The key is enhance our life with life enhancing water, which is now here and is essential.

The desired minimal energy level for humans is found between 8,000 to 10,000 Bovis, or slightly positive. The Earth itself creates energy in the 7,000 to 18,000 range. This energy is also referred to as "Biophotons", which are light particles invisible to our eyes. This positive energy is necessary to maintain life on Earth. Water that is in a highly charged positive state allows the immune system to function more effectively to eliminate disease and lower inappropriate inflammation. Water has the potential to heal all disease because the H₂O molecule establishes the foundation for the immune system's cell to cell communication centers to monitor and eliminate disease.

Distilled water – The fountain of youth

By Raymond

Distilled water – The fountain of youth by Raymond

Distilled Water – The fountain of youth

dotted;' width="100% ">

Distillation is a process by heating the water to produce steam. Which goes through ozonation, a filtering process then is re condensed and bottled.

So given the quick explanation of what is done to produce distilled water let's explain why water is good for the body.

As you should know the human body can survive without food for about four weeks.

But it can only survive 5 days without water. So it is important to drink the right type of water to maintain fitness.

That being mentioned Distilled water is the right water for the job of trying to keep fit.

The reason is because it contains no bacteria or biological contaminants because when the water goes through the distillation process it eliminates the contaminants which are harmful to your health including unnecessary contaminants like salts.

The list below will show what the fountain of youth or Distilled water has the ability to do.

Here is a list of what distilled water does for you

- 1.Helps cleanse liver and kidneys
- 2.It is good for good skin tone
- 3.It helps turn fat into energy
- 4.Good for keeping muscle tone
- 5.It will help you lose weight

Fountain of Youth, The Special Properties of Water

You might ask if there are any down sides to drinking this sort of water and skeptic thoughts are quite normal.

But the reality is this water has nothing more than effective results.

But the old saying too much of good thing can be bad well only if it where bad to begin with.

So in the result this water is the preferred form of purification for creating the closest thing to the fountain of youth.
