**Gardening – Natural Science NOT Rocket Science..**

**By Linda Gray**

**Gardening – Natural Science NOT Rocket Science..**

by: **Linda Gray**

Don't force yourself out of the most profitable hobby in the universe because you think it's too hard to learn ...It isn't!

Gardening is fast becoming the world's number one hobby, and with all the latest 'alternative' information we have to hand, gardening as a natural science is fun to learn about and rewarding in the extreme...

Produce your own fruit and veg – cut the shopping trips.

Keep it organic!– be nice to the planet, and your body.

Stay fit and healthy with exercise and fresh air.

Spend quality family time in the outdoors.

Turbo boost your creative spirit

And if that isn't enough to be going on with, learn about plant–kind in all it's glory. From trees through to fungi, there are millions of plants to research, grow and eat– no chance of getting bored!

First you have to take your first step.

Start gardening, be a gardener, enjoy your garden.

Starting from scratch? Let your imagination run wild. Stand in the centre (–ish) of your garden and imagine..close your eyes if you like.

## Gardening – Natural Science NOT Rocket Science..

Don't hold back. Let your creative thoughts flow. How much can you do with your space? Don't imagine for one minute that a simple lawn will let you off the hook here. A lawn needs maintaining, and mowing regularly – for EVER..and it can get kind of boring to look at as well! How about creating

a butterfly patch

a wildflowers corner

a vegetable plot

a herb garden

a water feature

Then you will need a shed to store your tools. Where would that be best placed in your garden? Don't waste a sunny position with a garden structure. Sheds don't need to be in full sun to survive!

Is there enough space to place garden furniture? Rather than going for the table-and-four-chairs-on-patio style, can you place benches and small tables in semi-shady spots near the honeysuckle or round the herbs?

When you think you have a reasonable idea of all you want from your garden, take some notes and think about it for a while. Don't leap in too soon—more often than not you'll land up doing the same job twice. Browse through garden catalogs, take a little time and do a little planning.

But not for too long! Don't let the ideas wither into another was-gonna-do-one-day file.

If you have enough of a budget to buy your garden structures and furniture, do this first, and position them in your garden. Then create your flower beds, vegetable plots and wildlife patches around these structures.

If you don't have cash up front, don't worry. The things you need will come to you. For now, prepare the space as if you DID have the shed, or bench or whatever, and work around these areas.

Start all the patches and work on them as and when you can, or start one patch and get it finished before moving on to the next. How you work in your garden depends on a number of things...

size of land and budget

helping hands available

seasons and the weather

time slots and energy levels!

Treat gardening as an ongoing hobby rather than a project to be started and finished. Plants are growing life forms and will always be changing the shape and feel of your garden. Go with it where you can, and prune heavily where you have to!

Get the kids involved with quick-germinating seeds, and fast-growing plants. Many retailers offer special seed mixtures for kids. Pumpkins are great for getting the kids interested in gardening.

Learn about edible flowers and teach the children what can and can't be eaten – and why.

Don't let the grass grow under your feet. Get in on the action now. Turn off the TV, put your wellies on and leap into nature!

Linda Gray is a freelance writer and, with her partner, has spent ten years renovating a neglected acre of woodland. Find heaps of straight gardening advice and pots of inspiration at

## **Science Fiction DVD**

### **By David Evermon**

The world of Science fiction is a vast one. Millions of fans enjoy their science fiction collection for many different reasons. For example, a science fiction DVD may have tremendous monetary value, sentimental value, or just the value of enjoyment. Whatever the reasons science fiction fans have raised the popularity of owning their own science fiction DVD.

One extremely popular reason of watching science fiction DVD's is that they can be watched over and over again. Some of your favorite television show episodes have now arrived on DVD, which means you can watch your favorite show as many times as you want to, commercial free. Furthermore, fans of science fiction take great pride in owning every science fiction DVD available in a certain category, movie, of a specific actor, or of a television series. They make for great bragging rights when you attend your next sci-fi convention.

What is great about a science fiction collection is that it can be steadily built, with very little monetary investment for the most part. Now do not get me wrong, some specific science fiction DVD may cost you quite a bit of cash. However, for the most part, you can build an extremely vast collection without much of a dent in your wallet. For example, if you are looking to build your science fiction collection or start one for the first time, you could consider looking online to find a cheap science fiction DVD.

There are many places you can look, for example, there are complete websites available to you on the internet that caters only to science fiction fans and movies. Furthermore, you can save even more money by visiting auction sites such as eBay or find a wholesale distributor to save money on a science fiction DVD. Some other places you may be able to save big money on your science fiction collection is in general merchandise stores such as Wal-Mart or K-Mart.

You do have the option of shopping at specialize movie stores; however, you should expect to pay a

little more money at these places. You could also find a cheap science fiction DVD in a video rental store. It may be a previously viewed movie, but it will still be cheaper than buying elsewhere.

Many fans looking to buy a science fiction DVD, may not even watch the DVD at all. It may be a special part of their collection. After all, many things are worth more when still in the original packaging, in mint condition, and has never been opened or used. This gives the science fiction more trading and selling power. Trading a science fiction DVD is a popular activity in the collecting world. Perhaps one person has a real desire to have a DVD that is in your science fiction collection, while they may have something of equal value that you have been looking so hard for. This again, gives you trading power, especially if the science fiction DVD is in good to mint condition.

David Evermon has been involved in many environment related projects, writing on many subjects including his science fiction hobby, David writes articles at
