Gas Saving Tips 1 – Use Less Gas And Save Money

By Doug Smith

You have probably heard these gas saving tips from the Environmental Protection Agency (EPA), the Federal Trade Commission (FTC), and whoever taught you to drive. Yet very few people actually bother to implement them.

Why is that? Are people tired of hearing them? Have these gas saving tips been said so many times that people tune them out? Well, you are going to hear them again in this series of articles, along with the reasons why they DO work!

Gas Saving Tip #1: Know Your Vehicle's Fuel Efficiency

The actual fuel efficiency of your car will probably differ from that stated on the price sticker. Variables such as make, model, weather, city or interstate driving, and driving habits will affect the fuel efficiency. Efficiency is measured in miles driven per gallon of gasoline used (miles per gallon or mpg).

That is why you should periodically calculate your vehicle's fuel efficiency. If you see it decreasing, you know that something's not right with the engine and can take quick action to fix it.

Some people are unaware of how to properly calculate fuel efficiency. It is more than simply dividing miles by gallons. For example, if someone drives 500 miles and then buys 1 gallon of gas, the fuel efficiency is not 500 miles per gallon!

Here is the proper method to calculate fuel efficiency in mpg:

1. Fill up your gas tank. Do not top it off.
2. Write down the starting mileage.
3. Drive until the tank is almost empty.
4. Fill the tank up again the next time you need to buy gas.
5. Write down the ending mileage.
6. Write down the number of gallons of gas it took to fill up the tank.
7. Calculate the Miles Traveled as the Ending Mileage minus the Starting Mileage.
8. The fuel efficiency in mpg = Miles Traveled / Gallons Used

Example:

Gas Saving Tips 1 – Use Less Gas And Save Money

A driver fills up her tank when the odometer reads 25,000 miles. When the tank is almost empty, she fills up with 18.5 gallons, and the odometer reads 25,500 miles.

Starting Mileage = 25,000 miles Ending Mileage = 25,500 miles Miles Traveled = 25,500 – 25,000 = 500 miles Gallons Used = 18.5 gallons Fuel Efficiency = 500 miles / 18.5 gallons = 27 mpg

If her next efficiency calculation under similar driving conditions is only 20 mpg, she knows that something is wrong with the vehicle.

As gas prices go higher, the need to save gas and save money on fuel is greater than ever. More gas saving tips can be found at the website below.

7 Tips For Saving Gas And Money

By Brenda Cyr

The U.S. Department of Transportation reports that Americans drive an average of 29 miles each day, and spend almost 60 minutes a day in their cars. With the price of gas at the pumps skyrocketing, it just makes sense to do everything you can to save your hard-earned money. It doesn't seem like gas prices will return to 'normal' any time soon. You need all the ammunition you can get to fight back; here are 7 tips to help.

1. Some credit cards are offering great gas savings. It works the same way that frequent flyer miles do—you get a bonus every time you fill up. You're going to fill up anyway, so take advantage of the bonus!
2. Join the 'club'. Gas stations are starting to offer great, money saving membership programs. Some grocery and department stores are also giving huge discounts at the gas pump when you use their store card. It's worth checking into.
3. Regular tune-ups and oil changes will save you gas in the long run.
4. Check out gas prices on the internet. There are websites that will let you find the best deals on gas in your area, without having to drive around looking for them.
5. If you are in the market for a new car, check out the hybrid models. Not only will you save on gas, but you will also be eligible for great tax rebates from both the state and federal government.
6. Use the cheapest gas possible. Most modern cars run just as well on regular unleaded as on the

Gas Saving Tips 1 – Use Less Gas And Save Money

more expensive premium gas.

7. Turn off the air conditioner. Running the a/c makes your car's engine work harder, causing it to burn more gas.

Use these tips to squeeze the most miles out of each gallon of gas, and start saving money at the gas pumps today.

Brenda Cyr publishes an e-book '62 Ways to Fight Back at the Gas Pump' Find out the tips and tricks that anyone can use to start saving money on fuel today. Visit
