Guess 'WHO' Can Stop Sp^am!

These days there are plenty of articles
on the troubling issue of sp^am...plenty of articles and plenty of feedback to these articles.

From all this tortured outpouring the general consensus seems to be that most networkers – who accept this necessary evil as an unavoidable consequence of being online – most feel the answer to the problem lies in the 'delete' key.

But while the 'delete' key and 'sp^am filters' (which seem to have created more problems than they have solved) are effective means to fight sp^am, these methods do not inform the sp^ammer his mail is being deleted and so he/she goes about their merry task happily unaware of any reductions in their 'response rate'.

What if we could add a slight modification to the 'deleting and filtering'...

There is every possibility that a sp^ammer may be reaching you with a product you require. What if – in these cases – you visit the website MINUS the affiliate code, make your purchase and if the sp^ammer's email had a contact address, thank him/her for sending you the info while also informing them how they have missed their affiliate earnings because they sp^ammed you instead of coming in like genuine and responsible networkers.

This of course will not stop all sp^am because sp^am containing affiliate links is just one small section of the huge sp^am 'market' but as word spreads it could deal a 'death-blow' to this section atleast.

Guess WHO Can Stop Spam

Even where other forms of sp^am are concerned, the sp^ammer's email will contain keywords of the product/service they are advertising. If this product or service is of interest those keywords could be used in any major search engine thus rewarding serious networkers who have spent time and money setting up websites, submitting them to search engines, and have been working hard for people to find them and their business.

Of course, considering the amount of daily sp^am one receives, the delete/filter options will have to be used but where ever possible this alternative should be used too.

I believe these ideas will work if we can spread the word far and fast and especially to reach sp^ammers themselves. The more sp^ammers know

what is being done with their sp^am mail – besides deleting and filtering – the less attractive will the sp^am option get.

So don't hesitate to send this on to your friends and spread the word all over the internet neighborhood.

LET'S GET INVOLVED AND
ENFORCE 'OUR' GROUND RULES...
Let's Help the New-born Newbie and
Genuine Networkers like OURSELVES...

Let's make 2003 largely 'spm-fhree'
I mean sp^am-fr^ee...
I mean spa^m fr*e...
I mean sp*m f^ree...
I mean...Oh, forget it!

Do include my resource box if you do so. Thanks!

p.s.
Would it be justified to use a sp^ammer's resources to blast this email to millions? Why Not Indeed!

:) Just Jokin'

A Quick Look At Email Spam Filters

By Oliver Turner

You must be eagerly finding for a way out to stop receiving Spam mails in your inbox. Take a quick look at email spam filters to get some idea on how to check spam. There are a number of email spam filters that you can use in your computer. For official purposes, you have anti server software spam where the spam filter is located in the server level to trap all email spam. They prevent them from reaching your inbox. The email spasm not only slows down the performance of the server, but also occupies a lot of storage space. Emails are the easiest and the best way for these viruses to spread.

Working of Spam Filters

Anti spam software and anti spam solutions are essential to aid you in getting a clean inbox. The server spam filter or anti spam server is a software application that scans all the incoming email messages. With the help of their configuration, they identify Spam and prevent them from reaching your inbox. The spam mails not only eats away the storage space and make selecting your personal emails difficult, they also can contain viruses. Using anti spam filters is necessary as it saves both your time and money. But even when you are using anti spam filters, it is recommended to check the messages just to make sure that no personal message has been marked as spam. Even the server spam filters marks email as "false positive" to those that are identified as spam, but in reality they are valid messages. There are various anti spam programs that identifies Spam and sends it to the junk mail folder.

Not all spam filters work in the same way. Some of them are pre programmed where the know spammers are inserted. They accordingly block them. Some of the programs filter the emails based on the keywords used in the mails. Some of the email spam filters are configured and you can easily customize it or the network administrator can also customize it according to the requirement of the company.
