Helpful Tips To Avoid Spam Messages

By Rene Graeber

The email brought convenience to communication. Where else can you find sending a message

faster than email? You can send a message almost in an instant to anywhere that has a receiving end. You do not need a pen and paper. Neither do you have to spend for stamps, envelopes, and trips to and from the mailbox or post office. Tremendous savings in time and money are realized with email compared to the traditional snail mail.

Email makes sending messages so easy that its downside made its way into the system with equal ease. The downside we are referring to is spam. Spam is an unsolicited or undesired email message sent out en masse by a spammer whose purpose probably would be to entice you to buy their ware. As a result, junk mails go up, cluttering the email boxes of almost everyone, including you.

To prevent further proliferation, legal steps are being taken by lawmakers. They are introducing ways and means to curve and penalize spammers. While waiting for these legal actions, you can outwit spammers by adopting some timesaving tips such as:

1. Be discreet in posting and giving out your email address. Spammers are on the lookout for email addresses in chat rooms, message bulletins, web pages, and directories. Sometimes, you unconsciously and unintentionally give out your email address in the open. Please be reminded that being discreet is the first part of prevention. It minimizes the flow of spam messages.

2. Ignore the message. What is the best way? Delete messages from unfamiliar or suspicious sources.

Remember anything not worth your time and attention is worth ignoring. If you ignore the message, there is nothing left for the spammer to be enthusiastic about. Just by responding to a message, even in a negative way, only confirms that your email address is active. This is all the spammer needs to continue doing his stuff. Where there is no reaction, there will not be any further action.

3. Come up with a complex email address. Some people even use letters and numbers with barely any meaning on it. Still, others make the letters of their names run reverse. Sure enough, this makes it difficult for your friends and welcome mailers to remember your address. Spammers will find it difficult,

as well.

4. Know that a spam attack usually runs in alphabetical order. When your Internet Service Provider (ISP) notices an onslaught is in the offing, they usually take steps to cut it off.

In this case, addresses at the end of the list would receive less unsolicited messages. While it is not your fault that your email address comes up early in an alphabetically arranged listing, you have the option to use a different name that makes it to the latter part of the alphabet.

5. Most ISPs maintain an abuse email address. Forward any spam message bearing an origin code to your ISP and who knows? Some positive action may be done about it.

You can minimize spam messaging by being more cautious and prudent in letting others know your email address and by taking some positive action on your side. This way, your inbox doesn't get cluttered with junk mails.

Did you know that 99.92% of the people trying to earn a living on the Internet are failing miserably? The problem is the frame of mind that most of the "dreamers" are in! If you want to change this make sure to visit the website:

A Quick Look At Email Spam Filters

By Oliver Turner

You must be eagerly finding for a way out to stop receiving Spam mails in your inbox. Take a quick look at email spam filters to get some idea on how to check spam. There are a number of email spam filters that you can use in your computer. For official purposes, you have anti server software spam where the spam filter is located in the server level to trap all email spam. They prevent them from reaching your inbox. The email spasm not only slows down the performance of the server, but also occupies a lot of storage space. Emails are the easiest and the best way for these viruses to spread.

Working of Spam Filters

Anti spam software and anti spam solutions are essential to aid you in getting a clean inbox. The server spam filter or anti spam server is a software application that scans all the incoming email messages. With the help of their configuration, they identify Spam and prevent them from reaching your inbox. The spam mails not only eats away the storage space and make selecting your personal emails difficult, they also can contain viruses. Using anti spam filters is necessary as it saves both your time and money. But even when you are using anti spam filters, it is recommended to check the messages just to make sure that no personal message has been marked as spam. Even the server spam filters marks email as "false positive" to those that are identified as spam, but in reality they are

Helpful Tips To Avoid Spam Messages

valid messages. There are various anti spam programs that identifies Spam and sends it to the junk mail folder.

Not all spam filters work in the same way. Some of them are pre programmed where the know spammers are inserted. They accordingly block them. Some of the programs filter the emails based on the keywords used in the mails. Some of the email spam filters are configured and you can easily customize it or the network administrator can also customize it according to the requirement of the company.
