How Choose The Right Type Of Lawn Mower

By Alan Ross

Do you like to have a beautiful lawn in your yard? Clean, green and well mowed lawn is not just everybody's dream but also is pretty much pleasing. You can engage a lawn mowing service for a fee but how about doing it yourself over the weekend? You need to know what type of lawn mower suffices your need and how much you should spend on it etc before you bought one for your home.

Choosing the Right Type of Lawn Mower

Before you chose a lawn mower, decide whether you want to buy electric or gasoline driven mower. Each type has its own ups and downs. In general you may follow the points as given below.

1. Base your decision on the area to mow. Larger the area bigger is the mower you may want to purchase. You can consider even the non powered mower for small lawns.
2. If your lawn is small and the farthest edge is about 30 to 35 feet away from your nearest power socket you can very well go for an electric lawn mower.
3. If it is for large gardens or golf courses go for ride-on models powered by diesel or gas engines with controls on both the hands. Even a garden tractor suffices for you. Engine power varies from 8.5 HP to 13 HP and the price from \$1750 to \$5000.
4. Price is an important factor to look at. A basic walk-behind model costs about \$400 and for a little more you get a better engine with ball bearing and utility handle bars. Higher prices like \$700 to \$900 get you self starting, self propelled models with additional features.
5. For sloped small lawns a Hover model suits best. They are light and easy, you need to carry them to lawn and start. They come in both diesel and electric versions.

How Do You Want To Mow Your Lawn

How Choose The Right Type Of Lawn Mower

Summer: Raise the mower to 3 inches or more to cut grass long. Mowing once in a fortnight may be enough depending on watering and soil condition.

Spring: Sharpen and service the mower before getting started. Only top-dressing must give the lawn a beautiful look.

Winter: Drain gas from the lawn mower and store it covered in your garage.

Automatic Lawn Mowers

The benefits of robot mowers are numerous. You don't have to push or ride a mower to get your lawn mowed, you don't have to deal with clippings, you free up some of your precious weekend time, and the mulch it creates is a healthy alternative to your lawn over fertilizer. Robomowers are also good for the environment - they take no gas or oil and create no emissions.

Lawn Mower - Keep Your Lawn Pretty All The Time

By Sharon Albright

Lawn mower offers to keep your lawn pretty and beautiful all the time. Since a well-maintained lawn is a reflection of the owner's personality and aesthetic senses, so one should always take care of the lawns. A poorly kept lawn overrun with yellow patches and dried weeds is definitely an eyesore to say the least. So to provide good ambience to the entire surrounding of your home you should regularly mow your lawn.

What to consider while purchasing a lawn mower?

The first thing to consider while purchasing a lawn mower is the size and texture of your landscape. Is you lawn sloppy or in a flat ground? What type of lawn mower will exactly suit your purposes? Considering these factors are very important. If your lawn is sloppy in nature, then you should get a lawn mower with high wheels. This will not only make it easier to push up or down a hill but also mow at the fastest speed. The other type includes a cordless or electric lawn mower. This second type is much less messy and mulches your lawn perfectly. However, the third type including the reel lawn mower does not contribute to the environmental pollution and is quite easy to use.

How to maintain your lawn mower?

How Choose The Right Type Of Lawn Mower

The lawn mower should not rip or pull the grass and weeds. It should mow the field perfectly. After mowing is complete, you should undertake a good maintenance program so that the lawn mower gives the grasses better cuts for years to come. Every spring you should clean and maintain the following parts of a lawn mower:

– Nuts and bolts should be checked and tightened wherever necessary – Spark plugs should be cleaned and replaced for good firing systems – The air filters should be cleaned and replaced on a regular basis. – Apply oil in your lawn mower to lubricate the engine – Clean the underside deck throughout the season to remove grass and dirt – Sharpen the blades at every alternate months so that the grasses get a clean cut

When you are keeping your lawn mower in storage for a long time, it is advisable that you remove the oil and gas and clean the exterior.

Safety tips while using lawn mower

To keep the lawn mower in perfect safety, you should properly read the instructions on the manual. While you are using the lawn, make sure that the children are not playing near the mower. Do not fill the tank of the lawn mower with gas in an enclosed area like under the house, garage or in a shed. It can lead to combustible fumes. Lastly, you should never add fuel to your lawn mower while the engine is running.
