## How To Dispose Of Your Old ATV Tires

By **Bill B. Carmel**

When it comes time to replace your old and worn ATV tires, many riders are eager to purchase new tires, but many are unaware what to do with the old ones. Regardless where you live, throwing old tires in a body of water or natural environment is improper—and in many cases illegal—since the tires can corrupt nature. When disposing of your old ATV tires, be sure to do so in a proper and legal manner that will not negatively impact the environment for future generations.

More and more often, tires are being recycled and formed into all sorts of new products. From park benches to carpets, recycled rubber is a durable and economical product. When you are faced with the decision what to do with your old ATV tires, look to your local recycling company to see if rubber is accepted. Although you may not be able to place your tires to the curb if your community is involved with curbside recycling, the recycling plant may be able to take the tires off your hands. Look to the phonebook or internet to find a recycling facility near you and make a quick visit or telephone call to see if your tires are able to be recycled.

Most tire stores that provide you with new tires for your ATV will be able to take your old ones. Before you make the change, be sure to ask the tire center what they do with old tires if you are concerned about the environmental impact unused rubber causes. Also, there may be a slight fee involved with properly disposing of your old tires, so know this amount upfront in order to prevent any surprises at the cash register. The state in which you live may have certain regulations or fees involving tire disposal, and this is often incorporated into your bill and is listed separately from the cost of the new tires or the labor to install the tires on your ATV.

If your old tires still have life in them, consider giving them to a friend or family member with an ATV. Keep in mind that old tires should only be used if they still have ample tread and are able to ensure the vehicle can be driven safely. Also, consider selling your old ATV tires so that you can use the profits to buy a new set. Look to your local newspaper and list a classified advertisement or turn to the internet with sites like Ebay or Craigslist to sell your tires. These are great resources and you may even find a new set of ATV tires listed at a more economical price than offered at your local tire store.

### **Which Brand Of ATV Tires Is The Best**

**By Doug Mahopac**

There are numerous brands of tires available on the market specifically designed for all terrain vehicles (ATVs). Quite often, when it comes time to purchase new tires for your ATV, the options are overwhelming. Although it is a great debate raging regarding which specific brand of ATV tire is the best, the question should be which brand ATV tire is the best for your needs?

There are several popular brands of ATV tires on currently on the market, ranging from the economical to the budget-busting. Tire pioneers Firestone, Goodyear, Pirelli, Dunlop, and Bridgestone produce ATV tires. These brands are most familiar with most tire consumers, as they produce automobile tires. Goodyear produces a wide variety of tires, including the popular choice for those interested in riding their ATV in muddy environments, the Tracker Mud Runner. Since the Polaris Sportsman 700 Twin was named 2005 ATV of the Year, Goodyear has become even more popular with ATV owners, since their Rawhide Grip tires are a feature of the 700 Twin.

For ATV owners wanting something out of the ordinary and are looking to after market tires to beef up their all terrain vehicle. Whether you want a tire that will out perform the typical treads available on ATVs straight out of the showroom or a tire that has a certain look that appeals to you, these after market tires are becoming more and more popular. Look to the High Lifter's Outlaw tire if you want to lift the entire ATV for additional clearing space underneath the vehicle. If you choose this option, be sure to also purchase a lift kit so that your new tires will fit. Keep in mind that any lifting of an ATV can reduce the stability of the vehicle, so do these modifications with the utmost of care. Furthermore, brands like GBC produce fantastic tires that are designed to travel in sandy environments, specifically the Sand Shark brand of tire.

If you are interested in racing your ATV, look no further than the Maxxis brand of tires. Their popular model, the Maxxis iRazr is a great model for anyone wanting a top performance ATV tire. Also by Maxxis is the Razr, Razr 2, and Razr MX. Also for racing are tires produced by Carlisle, especially the Carlisle S-Trac Radial and the Badlands models. These models are perfect for individuals who want control without compromising their top speeds. Keep in mind that racing tires should only be used for racing and are inappropriate and dangerous for any other use. These tires have flat, knobby treads that allow the ATV to travel at maximum speed, but in turn, have decreased stability and control, especially on muddy, sandy, or uneven surfaces.
