How To Make The Most Of What's Naturally Yours – Enhancing Your Eyes With Eyeliner.

By Allan Johns

The eyes are generally considered the most beautiful part of the body.

They are seen as "windows to your soul," and very few people decline to comment on a pair of striking eyes. Fortunately, they are also the easiest of features to enhance. So read on and discover how to make those eyes really "pop" and catch attention.

When you are first learning how to apply eyeliner, it can be one of the trickiest tasks to master. But when it is applied properly, the overall effects can be absolutely amazing. Skillful application of different eyeliner can help make your eyes look more evenly spaced, thus giving a better balance to your entire face, and this is only one of the benefits. The following tips will cover several aspects of eyeliner, including how to choose the right eyeliner for your eyes, and how to properly apply it to your eyes.

Choosing the Right Eyeliner

Like all beauty care products, choosing the right eyeliner is simple if you already know the effects you hope to accomplish by wearing it. In addition to helping balance the face, eyeliner is also meant to give lashes more depth, and make them appear thicker than they really are. Although there are two types of eyeliner, liquid and pencil form, it is recommended to only use pencil form on the lower lids of the eyes. Eyeliner in liquid form is most effective when only used on the top lids of your eyes.

When choosing the color of your eyeliner, you should always choose a color that complements the eye shadow you are going to use, but be sure it is a color that is flattering to your natural eye color. With brown eyes, the darker colors of eyeliner prove to work best, and with blue eyes, the softer colors tend to be most flattering.

Pencil Form Eyeliner versus Liquid Form

As mentioned before, eyeliner comes in two forms, pencil and liquid. Pencil eyeliner creates a soft definition to the eyes, while liquid eyeliner tends to offer more precision, and a more dramatic effect. When trying to choose which form of eyeliner to use, keep in mind the overall look you hope to accomplish.

Pencil form eyeliner is more popular, in part because it is easier to use. Liquid eyeliner requires practice in order to apply it correctly.

How to Apply Eyeliner – the Basics

To apply eyeliner correctly, you need to make sure you have applied all other make-up first. If you apply your other make up on top of the eyeliner, it not only takes away from the effects, but during the application process, your eyeliner could get smudged or smeared.

Once you have all your other make-up on, make sure you have a good mirror and appropriate lighting, then begin. In one smooth motion, draw a thin line from one side of your eyelid to the other, remaining as close as you can to your eyelash line. How thick you chose to make that line will have a bearing on

your final results.

Eyeliner is an inexpensive addition to your collection of beauty care products and can show stunning results - now you know how to catch attention and draw those admiring gazes.

Apply Eyeliner Like A Professional

By Julia Brown

Many people think they already know how to apply eyeliner, and by all rights, they do a good job. In actuality, there is a big difference between the way you might apply eyeliner and the way a professional make-up artist does. Use these easy-to-follow steps and you can apply eyeliner like a professional make-up artist:

1. Select your eyeliner

An eyeliner must be applied near the base of your eyelashes. As there are varying products in the market such as cake eyeliner, liquid liner and pencil eyeliner, it is important to try each type so that you will know which type will best accentuate your own natural beauty. Also, to whatever type you prefer, practice the application so you can achieve a very fine line. Remember that it is not a pretty sight when you apply eyeliner in a very thick line. It will look harsh, at the same time loud, making your eyes as well as giving it a tired and heavy impression. Always bear in mind that a thin line is recommended – should you have any trouble applying it, a brush is helpful to smooth out the line and to blend it well.

Liquid eye liner.

Liquid eyeliners are recommended to be used and should only be used above the top of the eye lashes, whereas an eye shadow or an eye lining pencil is suggested to be used under the eyes lower lashes. This kind comes usually in a bottle with an application brush, almost similar to an ink. This requires great precision during application, but can be perfected through constant practice. A note to remember is to always let the liquid dry before you open your eyes after application – if not, the liquid may smear the top of your eyes and give you a raccoon look.

Eye liner pencil

The easiest to use, works just like colored pencil. As the tip of this liner is dry, it has a tendency of pulling your eyelids fragile tissues; stretching the eyelids when lining it could help a lot in achieving a smooth application. A note to remember, you should always sharpen the pencil before every application to eliminate any bacteria that has accumulated at the tip.

Permanent eyeliner

This is can be created through cosmetic surgery. This procedure is known as micro pigmentation, a technique that adds a defined line to the lid which with a handheld device used to puncture the skin several times a minute with a very thin needle that pushes color pigments to the position that is desired.

2. Apply the eyeliner

– Begin at the inner corner of your eye. Always be certain to use a light hand when applying your eyeliner, as the area around the eyes is very sensitive and delicate.

– Put on your eyeliner only after you have already applied an eye shadow. Doing it before an eye

shadow application would only cover the eyeliner.

– To achieve a dramatic and intense look, a kohl pencil with a color can be applied above as well as below the lashes, and then followed with black or very dark gray liquid eyeliner at the top. This will give the impression of dark eye lashes and will stay on for the whole day. A dark colored eye–liner will highlight the eyes form and outline as well as give them a deep look.

– While holding your head back facing the mirror, look down so that your eyelids will become tight making it easier in applying and controlling the liner. When necessary, smudge.

– The eyes will seem larger when you make a line with a pencil under your lower lashes – instead try a dark eye shadow applied with the help of a tiny makeup brush, to give an illusion of darker and fuller eye lashes. Below such line, you need to apply also a thin line with a lighter shade of eye shadow, preferably white, yellow or beige to brighten up your eye area.

How To Make The Most Of What's Naturally Yours – Enhancing Your Eyes With Eyeliner.

– Pencil liners may be used on both above the top lashes as well as under the lower lashes. Liquid eye liners however, must only be applied on the top lid. Cake eyeliners are applied with water and may be put on to both the top and so too the bottom of the lid.

– If you have beautiful green eyes, try putting on a violet smoky pencil that will enhance your eyes, since basing from the color wheel, violet and green are opposite, so they will compliment each other.

– Refer to nature when you are in a process of deciding on a color. Green, beige and burnt orange are autumn colors.

– Others prefer using an eye liner not only for the eyes, but the lips as well. Should you decide on this, an eye lining pencil will be most suitable for the application. Make sure though, that you choose a certain shade of somewhat reddish brown or orangey–brown or a brownish plum, to compliment and flatter your lipstick.
