How To Stop Unwanted Emails!

By Doyle Beitz

How To Stop Unwanted Emails! by Copyrights © 2004 by Doyle Beitz

This is down to earth, no nonsense, just the facts type of information. What are the benefits that you gain by reading my article. Anyone using Microsoft Outlook or Outlook express runs the risk of infection if they use the preview pane which most people do.

Virtually anyone with up to date anti virus protection software found the virus relatively easy to stop before the virus infected their system, however dealing with a virus is highly inconvenient and a waste of time.

Every time you get an infected email you will have to stop and clean it up. I finally got tired and decided to look for a program that would let me check my email before I even downloaded it through my regular email program, Outlook express. I was in search of an email checker program that I could use to stop viruses and emails before they got downloaded to my computer. I choose the MailWasher Pro as I have multiple email accounts to check.

So I went to my favorite search engine to look for a free program that would let me preview my email on my mail server without downloading the actual email message.

After doing my research I discovered a program called MailWasher Pro they have a free program, which allows you to check the headers in your email inbox before downloading to your computer.

You can see who sent the email, the subject line (which is a spam tip off), the size of the email with any attachments, and date.

Now this solution won't apply in every situation (no solution can guarantee this) but it helped me out this time.

Yet, I soon noticed that there was an added benefit ! I was able to eliminate the majority of spam emails that was in my inbox. I just clicked blacklisting most of the offending emails without downloading the email. This has been quite a time saver!

How To Stop Unwanted Emails!

You should update your anti virus protection weekly and check you email before you download it to your computer. You must make it your responsibility to protect your own computer, data, and personal information against loss, by backing up your files.

MailWasher Pro analyses each email as it arrives and warns you if it is suspected junk mail or a virus, at which point you can choose to blacklist it, that it will get bounced back to the sender, so they will delete it from their mailing list as a inactive email address.

You can use the Free MailWasher Pro download this is a 30 day trail version you will need the pro version if you have multiple email accounts, however you can use MailWasher Free here which is good for one email account.

In Closing you will need to have all this information to run your own legitimate home based small business. I recommend you do your research well, as you don't want to find yourself with the wrong email program.

What Is Anti-spam Filter?

By Julia Gulevich

Spam is unsolicited and unwanted email. Other common names of spam are spam mail, bulk email or just junk mail. Today, spam has reached such monumental proportions that almost every other message we receive is spam. Protecting the inbox with anti-spam filter has become one of the barest necessities for almost all PC users.

In a few words, anti-spam software helps detect spam. It is a program that detects unsolicited and unwanted e-mails, and doesn't let them slipping into your inbox. The anti-spam program is installed onto your computer and filters your inbound emails. The email filtering is carried out based on a number of criteria. These can be specific words in the subject line or in the body of the message, type of files attached to the message, images embedded into the message. You could set the filter to check the sender's email address out. If you have your own whitelist or address book with trusted email addresses, you could arrange the anti-spam filter to refer to that whitelist. It also can detect known spammers by checking a blacklist of habitual spam senders maintained by certain Internet Service Providers. If the email sender is on the blacklist, the message is rejected.

Anti-spam filters have adapted to the wiles of the spammers. They use techniques that do not trash legitimate emails by effectively analyzing the content of the email. Such software looks for keywords and tries to interpret their meanings in the sentences. Certain spam filters reject the messages if they

come to you in the form of "Undisclosed Recipients", and accept the emails where your email address is in the "To" or "Cc" fields.

Anti-spam filter is an essential part of your computer's security tools if you want to ensure that you only receive the emails you want. Now you can select the right anti-spam software for your computer and start fighting spam.

Author is a technical expert associated with development of computer software like Advanced Administrative Tools, Advanced Email Verifier, G-Lock EasyMail, antispam software
