How to Choose Rims for Your Vehicle

By richard gazzo

How to Choose Rims for Your Vehicle

Nothing else enhances the look of your car or truck more than custom wheels, the bottom line is that rims make the look of the car. Within 15 minutes you can install chrome mags and the look of your car is totally different, from boring to show stopper. Everyone likes the look of aftermarket wheels, but how do you choose the right rims for your sports car?

Custom mag wheels are available from so many aftermarket wheel manufacturers it is truly amazing and the list grows every year. Some of the most popular names include Eagle wheels, Chip Foose rims and Weld wheels, to name a few. When choosing aftermarket wheels you can get cheap prices which sometimes means cheap quality or you can spend a little bit more and be 100% completely satisfied with your purchase. You get what you pay for, so you have to make sure you know what type of quality you are getting. But quality can be very expensive, so can the style of the wheel.

Wheel styles range from regular 5 spoke alloy wheels, to wire wheels, to the latest and greatest, chrome spinning wheels that run up to \$3,000 per rim. Chrome spinning rims are the newest invention to hit the custom car crowd, "chrome spinners" as they are called actually spin, even while you car is standing still!

Now back to how to choose your rims, if you are looking stricly from an appearance perspective, then it's easy, just choose custom wheels that you feel fits with the style of your vehicle and your personal preferences. If you want performance for racing, then light alloy wheels are the best way yo go. Steel rims are no good, they will only slow your automobile down. Heavy wheels add unnecessary weight to your car, which in return lower the driving performance.

If you do lots of city commuting in traffic, then alloy wheels are a great choice. Alloy rims actually offer cool air flow over your car's brake system which will prevent overheating. Alloy aluminum wheels are lighter than chrome or steel wheels you can also improve your gas mileage slightly.

Another tip to help the performance of your auto is to install rims that are one or two inches larger than

How to Choose Rims for Your Vehicle

the stock factory wheels. Larger wheels also give your SUV truck or sports car a more sporty look and feel. Also make sure the custom wheels you purchase have a maximum-load rating compatible with your vehicle, and you have to find wheels that match the bolt pattern of your automobile.

The offset is also very important. If you install the wrong offset size, there will be problems with the steering and handling of your car, so make sure to find the right offset. A sales person at the wheel shop will be able to help you choose the right offset for your vehicle, so don't worry if it sounds complicated.

Where can you buy wheels from? You have a few choices here, you can shop at the local car accessory store or you can shop online for your wheels. Each has their own benefit. If you shop at a brick and mortar store you can touch and feel the rims before you and if you have questions a sales person can answer your questions. If you shop online you have less help, but the benefit is in the savings, you can save hundreds of dollars compared to retail stores. It's a give and take situation, if

you have the knowledge I suggest you shop online, why pay more if you don't have to.

Customize Your Car With Wheels And Rims

By Barney Garcia

Post 1900's, the aftermarket for cars' wheels and rims has become huge. Everyone wants to customize their car with the latest and trendiest set of wheels. You car can look more trendy within minutes of installing the latest set of custom wheels and rims. But selecting the right one is extremely important.

Types of custom wheels and rims There are many different types of wheels and rims that you can find in the market. But not every one of them is designed for your car. You can get everything from the basic 5 spoke ally wheels to the more advanced chrome spinning wheels, which are a fad nowadays.

Appearance - Alloy and Steel If you are just concerned about the appearance, then select the custom wheels and rims that you feel will suit your car the best. But if you are looking at racing, then choose an ally wheel as it is much lighter and will give your car the power it desires. Steel rims are much heavier and will slow down your vehicle. Alloy is also good for city traffic and prevents over heating of the brake system.

Installing larger than factory custom wheels and rims will give your car or SUV a sporty look. Find a one that matches the bolt pattern of the car. Ask the sales person at the store to choose the right offset for your vehicle. If this is not correct it will lead to problems in handling and steering of the vehicle.

Pricing If you pay less, you will end up compromising on quality. If you go for slightly expensive wheels and rims, then you will get the look as well as the quality that you want. In comparison to brick and mortar stores, prices at the online stores are very less. The advantage of buying wheels and rims at the brick and mortar stores is that you can see, touch and have a feel of your custom wheels and rims.

It is not hard to choose the right wheel and rim for your car if you are know what you want and aware of the choices available.

Barney Garcia writes about many different tire and rim topics.
