**It's 10PM: Know Where Your Children Are With GPS Tracking**

**By Simon Wryzowski**

It's not being a parent these days. It seems like we never stop worrying about our children, from the moment they step forth into the world, to their teenage angst driven years, and beyond. Some things never change. Except science and technology. With GPS tracking devices it is now possible to keep tabs on your children without constantly worrying if everything is alright.

Is GPS The Missing Link to Effective Parenting?

No. GPS is a tool like most technologies which are designed to give you peace of mind. Things that certain global positioning systems devices can indicate include that of where a person is, and even trigger an alarm whenever that person crosses certain safety zones. More advanced models can provide more information such as the blood pressure, heart rate and body temperature of the person wearing this communications device (usually in the form of a watch, cell phone, or PDA-like device).

Some Practical Situations

Imagine going shopping, or attending a parade, or even visiting a foreign country with your children. A GPS tracking device would save you lots of headaches down the road and provide a better sense of knowing where your children are. This applies even when your child grows older and you'd like to have a somewhat of a better sense of knowing they are not in harms way by immediately knowing their location.

One important thing to reinforce is this, GPS, like a swimming paddle, is a precautionary tool, and not a replacement for your own vigilance in watching over your children. Please do not allow anyone or anything take the place of the sacred bond you hold between you and your child. You must be in control of the tools, don't let them be in control of you.

## **GPS Technology Can Be Useful To You**

**By CP**

If you have a job that requires as much traveling as mine does, or if you want to ensure your personal well-being wherever you go, you should look at your options for installing a GPS tracking system in your car. Nowadays, the tracking system is being included in more and more cars directly from the manufacturer. If your car was made before the wave of GPS standards, there are many outlets on the internet through which you can locate a GPS system that will fit your needs.

One of the best things about GPS technology is its ability to always find out what road you are on in the event that you get lost. If you ever need to use map out a course for traveling, the GPS has course-planning functionality as well.

Another benefit of GPS is that you will be more protected from vehicle theft. Your GPS system will be able to assist the police in tracking down your car with practically no problem. It's exact location can be pinpointed every moment it's on.

Many insurance companies offer reduced rates for those of us who purchase cars with GPS systems built in, or spend the money to get it installed. Having the system installed will pretty much pay for itself in the long run.

As I said before, many automobile producers now install GPS systems right off the bat. Usually the added feature doesn't increase the total cost by a substantial amount. So if you're looking to buy a new car, it's a good idea to look for one with GPS pre-installed.

If you look online for GPS systems, you should be able to find them with no trouble. You can also look for systems in electronic stores and car specialty stores. They usually carry tracking systems to their customers, and most stores will also offer installation services for a miniscule fee.

As I have demonstrated, there are countless benefits to having a GPS system installed in your car. So if you are considering buying a new car, I encourage you to look for a car including a GPS tracking system. If you already have a car, you might consider installing a system to your current vehicle for the benefits I have shown.
