Dear Editor: The following article is offered for your free use, provided the resource box is included. We would appreciate being notified if you use the article. Thank you!

LOST ELECTRONIC DEVICES BECOMING COMMON AT AIRPORTS

By Laura Quarantiello

370 words

There's more to the new airport security measures than just the delays and inconvenience you have to deal with. During the confusion and hassle of X-rays and hand checks of luggage, more and more people are misplacing or forgetting electronic gear such as cellular phones and laptop computers. Airport personnel say that the number of electronic devices found unclaimed in airport terminals is rising. Reuniting these gadgets with their owners is becoming a difficult and full-time job. Most of the gear is unmarked, lacking even basic owner information such as an ID tag that would allow airline personnel to contact the owner.

Here's how to increase the chance your property will be returned if you should lose your PDA pal or laptop life support:

Mark everything with your name, address and phone number. Use an identification tag on laptops and other larger devices. On cell phones, pagers, PDAs and other smaller gadgets use a printed label on the back. Some people place the label on the inside of the

battery compartment so it's less conspicuous.

You can also engrave your ID information on your gear making it more difficult to remove or rub off. If name, address and phone is too much information to include, just use your driver's license number.

Keep a record of the serial numbers of all your electronic equipment. (Most have such a number somewhere on the case.) Record the numbers, along with type and description of each unit and keep the information in a safe place. This will come in handy when you have to submit a claim or need to identify your property

Report all losses. If you think you might have left an electronic device at the airport you should contact the airline, report the loss and file a claim as soon as possible/ Also consider reporting the loss to law enforcement. Many devices are recovered by the police.

Get in the habit of keeping a close eye on your belongings. In the madhouse of the airport it's all too easy to look away for a second or forget to pick up what you laid down. Make sure you know what you brought with you and where it is at all times.

(end)

Laura Quarantiello is the author of "Air-Ways - The Insider's Guide To Air Travel." This great book covers every aspect of getting thereby air - from picking the airline to getting the best deal and even which are the most comfortable seats. Electronic Display Boards

By Paula Jones

Electronic display boards signify high priority messaging, allowing you to communicate critical, and time-sensitive information.

Electronic display boards are present at many fast food restaurants today, aiding, and restaurants to increase sales, publicity and improve their service to you. As a customer, Electronic display boards allow you to check your order and provide you the peace of mind that you are getting what you pay for.

At airports, electronic display boards assist airports in providing you a constant update on flight information. Many banks of today post outdoor electronic displays to provide friendly information to the community. From community reminders, to time and weather information, their outdoor electronic display board keeps you informed.

Lost Electronic Devices Becoming Common in Airports

In theatres, electronic display boards can give you a preview of what you will see inside and once in the door, these boards can provide you with show start times, theatre numbers, and concession information.

Perhaps the biggest show of the products that is manufactured is sports venues. All around stadiums and coliseums are examples of Electronic Message Displays – electronic signs, reader boards, LED video displays, and variable message boards. These products combined cover every angle of the game, from instant replays on giant LED video displays, to stats from other games in progress through electronic message centers.

Electronic displays use LED technology, which stands for light emitting diode. State-of-the-art LED technology not only enhances readability; it offers unsurpassed flexibility, reliability and cost effectiveness. L.E.D. signage not only offers the broadest range of products, but the highest level of support.

With Quality, support, and vision - electronic display boards provides superior and brighter result offering a selection from number of products and services that will give you well on the way to increasing your exposure and your profits.

Paula Jones

Jayex Technology Limited, based in London specialise in advanced information display systems. Established in 1978 we have pioneered the development of the LED display market and now have over 18,000 customers worldwide. We offer, probably the largest range of models from small single line
