Flash Seo Software

New Search Engine Optimization Software Revolutionizes Internet Marketing

PITTSBURGH, Pa. - Two well-known Internet marketers (Keith Baxter and Phil LaBoon) from opposite sides of the United States have teamed up and created software that is making huge waves in the Internet Marketing World and changing the way webmasters build websites. Flash SEO Software as they call it works off of the fact that internet search engines recently started being able to read Macromedia Flash files and index the content accordingly, which ultimately leads to better positions in the search engines. This software actually takes standard website pictures that search engines can't read and converts them into thousands of words that search engines can index - all without the visitor noticing any change in the picture. As if this weren't enough, the software also lowers the file size of most images and protects them from being stolen.

"Who would have thought something so easy could almost double my online traffic in just a few weeks? I would have paid three times the asking price for these results!" -- Brian Driscoll, Beta Tester

This software is unlike anything ever created. What makes this SEO software different from others is that it was created by internet marketers for internet marketers. It's the brainchild of two well-respected members in the SEO community and is being used by dozens of smart-minded webmasters who are seeking to bring in more traffic to their web sites and rank better on search engines.

New Search Engine Optimization Software

This software works on three levels. First, it brings large amounts of new traffic to sites, via better search engine rankings. Secondly, it protects sites from others by not allowing images to be downloaded. This is done by embedding pictures into a secure format and lowering the file size of all images. Finally, this embedding frees up bandwidth, saving the user hundreds of dollars on hosting bills every month.

"After uploading the software, I noticed a huge spike in traffic and better ranking for many of my keywords in just a few days ..." -- Joy A., Customer
###

Phil LaBoon has been doing SEO for companies for several years and has finally developed his own software that not only increases traffic but lowers file sizes and protects pictures as well/

How Can Seo Help My Website?

By Dana Bradley

SEO or search engine optimization is very useful for any website. Search engine optimization basically directs search engines to your website whenever a key word is typed. So if your web site is search engine optimized, whenever a user types in the keyword "cat," your website will be displayed on the search list if you are a cat lover's web site.

If you are a marketing firm trying to sell different kinds of products, then you may want to use search engine optimization to your advantage. If you are selling carpets for instance, you would definitely want the users to see your site when they search for carpets on the internet. Your sales will dramatically increase if you properly optimize your site for search engines.

If you are a charitable institution that is looking for donors to your cause, then you may want to use search engine optimization to increase everyone's awareness of what you are trying to do in the world. Let us say you are trying to save the dolphins in your area from extinction. If you would like to raise funds for dolphin protection in your area, you must use search engine optimization to reach users who type in "dolphins" in their search engines. Not only will you reach these people and let them know of your cause, they will also probably be donors and helping hands to what you are trying to do in this world.

Let us say you are an internet dating site. You charge members \$2 a month to be listed on your dating list. If you would like to increase the number of users in your website, then you should use search engine optimization. Whenever someone is looking for a date through the internet, all you have to do is to be key word sensitive to the word dating on search engines. Whenever someone types the word "date" or "dating," your site will automatically appear on top of the list. Watch web traffic increase in your site and watch your online sales soar to new heights.

If you are someone who simply wants to become popular, then you could use search engine

optimization to your advantage. Whenever someone types in your name on a search engine, your website will appear. You can put all of your crazy stuff there or whatever substance that makes yourself popular. You can upload videos to your website showing off your soccer skills. Maybe you might want to upload some poems on your website if you are a writer that wants to be heard.

SEO or search engine optimization is definitely an advantage to anyone who uses the World Wide Web on a regular basis.
