"PS2 Disc Read Error: Whats The Probable Cause And How to Fix it"

By Jason Lewis

Dont you just love your PS2? I mean if it were up to me, i would nominate it for a nobel prize. But

thats just me talking. Yes, it has provided me with great entertainment value. It helps me to relax, vent out and chill the time away.

But sometimes it really frustrates me! Especially if its showing that "Disc Read Error". Argghh... Have you experienced this? You go to you local video game shop, get the most recent and popular Playstation 2 game. Your really phsyced up on spending time and beating the game. But when you load it to your PS2. The dreaded PS2 Disc Read Error shows up! Waaa..... its really that frustrating to me. So I tried to do some research and learn how to fix my PS2 quickly, so I can get back to my game.

Two most common cause of PS2 "disc read error"

1) Lens Obstruction – this is probably the most common cause for disc read error to appear. Situations that there are dust in the lens, hardened dust that cant be easily blown and mal alignment of the lens. Such situations can cause the dreaded error to surface.

To fix the problem, you can start by blowing the lens. But if that doesnt work then you have to open it and clean it from the inside. BUT! theres a big but! dont try to do this without a manual. Its fairly easy to do but without any guide, you'll risk of doing more damage. Plus theres one thing that you should wear in your wrist before opening ang touching the internals of your PS2, otherwise you might short circuit it and theres goes you Playstation 2.

Now, dont worry. I compiled a short guide, with an easy step by step solution on how to open and clean your PS2, also It includes the thing that you should wear in your wrist to avoid short circuit. You can get more information about this compiled guide at the bottom of this article where theres a link in the author's bio / signature box.

2) Voltage problems – If cleaning the lens still doesnt work. Then theres a problem with your PS2's voltage. This is usually set in default to fit the average home. But due to some current surges in power

"PS2 Disc Read Error: Whats The Probable Cause And How to Fix it"

lines, this can cause disruption thereby causing the PS2 voltage requirement to alter.

Fixing this is simple. Inside of your PS2 theres a switchh like or more like a clock that regulate the voltage. I also included this on my short guide on how to exactly do this, its easy to follow and you'll get your PS2 disc read error gone in no time.

So that 's the 2 most common cause for PS2 disc read error to appear. Fixing it is fairly easy if you have the right guide. That's why I highly suggest that you grab my guide so you can be on your game in the next 2 hours.

What Does That Error Message Really Mean?

By Jim Edwards

What Does That Error Message Really Mean? by Jim Edwards

Surf the 'Net for about 10 minutes and chances rate very high that you'll encounter an error of one kind or another.

Whether the error message pops up on your own computer or on a website loaded in your browser, knowing what the error means can help you solve the problem much faster and avoid hours of frustration (especially in a situation where nothing you do will solve the problem).

The following represent some of the more common error messages you may encounter while surfing the Internet and what (if anything) you can do to correct the situation.

Error: 404 File Not Found

This means the web server cannot find the file or web page you tried to pull up in your web browser.

Almost nothing you can do will correct this situation.

"PS2 Disc Read Error: Whats The Probable Cause And How to Fix it"

Try hitting your web browser's "Refresh" button to see if the page will load. If not, email the website operator to let them know of the problem and then move on.

Error: 500 Internal Error

This error usually occurs when you fill in a form on a web page (contact form, shopping cart, feedback form) and click the submit button.

This means the server or the script handling the form on the server has a major problem. Again, there's nothing you can do so just email the website owner and move on.

By the way, resubmitting the form a dozen times, banging your hand on the keyboard, and yelling at your monitor won't fix the problem!

Error: 408 Request Timeout

This error usually occurs when you try to download a huge file or large web page and, for whatever reason, the connection times out.

Simply hit your browser's "Refresh" button and it should pick up the download again where you left off.

If not, contact the website owner and inform them of the problem or check back later.

Error: Host Unavailable

Grab a cup of coffee on this one and fall back to reading the newspaper.

You can try hitting your "Refresh" button a couple of times, but, for all intents and purposes, this means the server has gone down.

Try again in a few minutes on the off-chance you tried to access the website just as the owners were restarting the server or temporarily disconnected it from the Web.

If this doesn't work, the phone rates your best course of

action to contact the website owner since it's a safe bet their email won't work either.

Error: Unable to Locate Host

This message usually means one of three things: the web server is down; your Internet connection is dead; you typed in the web address incorrectly.

To correct the problem, first try retyping the web address into your browser's address bar. If that doesn't work, try surfing over to another website to make sure your connection is live.

If you can't load any websites, contact your Internet service provider (ISP) for technical assistance.

As a general rule, if you encounter an error while surfing the web, try these steps in order to fix the problem:

1. Click your Web browser's "Refresh" button.
2. Verify that you typed in the correct URL (web address)
3. Close down and restart your Web browser completely.
4. Contact the website owner to alert them to the problem or request help.
5. Contact your ISP for help.
