Pioneer Car Audio Mp3 What To Look For When Purchasing

By James Southall Jr.

When choosing a pioneer car audio MP3 it's important to address a few key questions.

How much do you want to spend? What features are most important to you?

An MP3 is a way to encode audio that compresses data so it can store a lot more of it while keeping a high standard of quality. Pioneer has a long-standing reputation for quality and also for being one of the easiest car audio systems to install and use. They make a range of car audio that can play MP3's, including the lower end DEH-P3700MP for a little over \$100 to the AVICD1 navigation system for about \$1,600. If you are looking for a basic system to play CD's and MP3's, a simpler system will be fine. But, if you want more features like navigation or a DVD player you will pay a lot more for a higher end system.

One of the most important things to look for is how you are going to navigate through all of your MP3 files, especially while driving.

If you have a large library of music, you will need to find an MP3 player that makes browsing through the discs as easy as possible. Many discs can hold up to about 250 songs, and it's crucial that you can find exactly what you're looking for as quickly as possible. One of the most reasonably priced MP3 player's Pioneer makes is the DEH-P5500M, which costs around \$270 and allows you to organize files by artist, track, folder name, file name, and album. It also has satellite radio and CD changer controls. It's also imperative that you check that the discs you use on your computer for music are compatible with the ones for the MP3 player, otherwise you might end up with a library of music that won't play in your car. ID tags to identify songs must be a certain version compatible with the car's system, or you'll end up with a lot of unusable music. If you figure out what you're looking for, you can make an educated decision about which system will best suit your budget and your listening needs.

I have 10 years experience in the automotive industry from electrical to electronics to bumpers, brakes. I have worked on the chevy, oldsmobile, volvo and ford.

5 Ways to Enjoy Your Music Files

By Gary Hendricks

OK, say you've got one thousand of your favorite MP3 songs sitting in your hard disk. What's the best way to enjoy those files? Most of us probably will use the Windows Media Player to listen to those files, but did you know there are other more innovative and interesting ways playback MP3, WMA and WAV files?

Let's take a look at the five methods.

Use MusicMatch Jukebox

If you think most that most PC programs for playing digital music look like the built-in Windows Media Player, think again. There are programs out there that go far beyond the Windows Media Player in functionality. One great example is Musicmatch Jukebox from Musicmatch. Musicmatch Jukebox is quite simply the world's best digital music player. It supports playback of various music formats like audio CDs, MP3s, Internet streams, WMAs, WAV files and more. You also get CD burning, music ripping and music organizing capabilities. The Plus version even allows you to automatically tag your music files with detailed info and album art!

Use a Portable MP3 Player

Portable music players like the Apple iPod, Creative Nomad and Rio Nitrus have taken the market by storm. You don't have to be confined to your desktop PC or laptop to listen to digital music! The portable music players can allow you to take your music anywhere. The compact size of MP3 and WMA music formats means that you can literally take a jukebox of thousands of songs wherever you go! You may also want to check out my review of the top 5 portable music players here. There are also other portable music options, including handphones with MP3 support.

Use a PDA

The latest Pocket PC or Palm-based personal digital assistants (PDAs) can also act as music players. Pop in a large memory card (e.g. 64 MB) and you can store many MP3 or WMA files. Then hook up a headphone, launch the music software in the PDA and you're good to go! I personally own a HP iPaq 2210 which effectively keeps track of my appointments and doubles up as a music player.

Use Your Car Stereo

This is my favorite way of listening to my MP3 collection. I recently bought a car stereo that can playback native MP3 songs. This means that I can pop in a data CD containing hundreds of MP3 files and the car stereo will play them! This does not work on conventional car stereos. If you own a conventional car stereo, but still want to listen to your MP3 songs, one way is to create an audio CD from your music files first. The car stereo will then have no problem interpreting and playing back the audio CD. Of course, in this case, you'll be limited to about 14 to 17 tracks of music only.

Pioneer Car Audio Mp3 What To Look For When Purchasing

Use Your Home Stereo

If you're a music lover, you probably already have a home stereo. Use it to listen to your MP3 music files! However, take note that Like car stereos, conventional home stereos will not be able to play back native MP3 songs. You will need a newer home stereo set with MP3 playback capability. New models from Kenwood, Panasonic, Pioneer and Sony usually have MP3 support.

Conclusion

As you can see, there are many ways to enjoy that digital music collection of yours. My favorite methods of listening to digital audio files is via a portable music player or the car stereo. Of course, you may have your own preference – some people like to listen to music off their desktop PC or laptop. Decide which method(s) is suitable for you and go for it!
