Pocket Rockets - Have A Blast With This Tiny Structure

By Sharon Albright

Have a blasting experience with the most tiny-yet-mighty pocket rocket, one of the most popular

portable battery vibrators of today. It is a just a four-inches long battery that easily slips into the pocket of the trousers or purse and serves as a unique toy piece to enthrall excitement. It is thus the quietest, most compact and technologically advanced personal vibrator in the world.

The pocket rocket can be used for a variety of purposes. It acts as a vibrator battery in toys and small models, can be used in pocket bikes, and also serves the purposes of arousing erotic excitements. Complete with its sleek look, the pocket rocket has spawned a series of similar vibrators that even includes a waterproof model and knockoffs in variety of colors of the rainbow.

The pocket rocket can be used in the toys and small models. When in use it starts reverberating with a particular vibration and this causes the toys and models to move about. This is very attractive to the children as they find the toys moving with just a twist of the keys. It also serves as an ideal kind of toy for a long plane ride, for a night on the town or for taking a quickie in the bathroom.

Another use of pocket rockets includes satisfying sexual necessities. The battery starts vibrating with a peculiar rhythmic note and when you hold it against your cheek or palm it delivers a wonderful erotic sensation to your entire body. Simply rub it in your cheek or in your palm and notice the difference of feeling you experience. It is specially useful for those couples that want to add spice to their love life. It can be easily incorporated during lovemaking to stimulate a woman to reach orgasm instantly.

While you are using it, you should avoid any type of injury. Do not use the pocket rocket in the swollen or inflamed areas or in skin lacerations. Never use it while bathing or while you are in the shower.

The pocket rocket can also be called as an electric powered replica of a real racing pocket bike that is simply best for thrill seekers. Made of durable steel, the pocket rocket travels up to 15 miles per hour and is charged by an electric battery that in turn provides more than 45 minutes of most thrilling and electrifying driving time. But remember that these pocket rocket bikes should be ideally driven in the backyard and driveway instead of in freeways or high-traffic areas.

Pocket Rockets – Have A Blast With This Tiny Structure

Use pocket rockets to have a wonderful experience, hitherto unknown to you.

All about Minibikes and Pocketbikes

By Gisbert Oskam

For those who were too small or too young to grip the handles of a motorcycle, minibikes were a worthy alternative. Minibikes were about 4 feet tall, weighed as little as 65 pounds, and had wheels about 10 inches in diameter. With a frame like that, they didn't go very fast – but no one seemed to care.

As minibikes progressed, they soon came available with engines, brakes, suspension and headlights. They became more popular for off-roading than to race. Minibikes managed well in rough terrain and were not damaged with a fall.

Because of the small size of the bikes and the young age of the drivers, minibikes were outlawed on main roads. Children began seriously injuring themselves by driving on streets where cars could not see them. By 1973, with the law was much stricter with minibikes and with the first generation of enthusiasts graduating to real motorcycles, minibikes purchases slowly started to fade.

Now however, there is a whole new generation that has discovered the fun-factor of the mini bike or pocket bike. The latest trend is to get a minibike and then totally customize it into a super pocket bike. All kinds of accessories are available to facilitate this. Think custom saddles, headlights, chrome –everything– and of course engine kits to increase the power of the mini motor bike.

With these fun mini bikes getting more and more faster and more popular then ever, some cities have banned the mini motor bikes on city streets and sidewalks. Others have adopted strict safety rules. For instance, California requires riders of motorized scooters be at least 16 years old and wear helmets, and the state does not allow riding after sunset.

Although there has been an increased number of complaints about the motorized "pocket rockets", for instance the pocket bikes would be "low to the ground and hard to see around cars and trucks", and "they're noisy", the new pocket rockets and super mini bikes have never been more popular, and probably will be for some time...
