Product Reviews: Windows XP

By Richard Lowe

Product Reviews: Windows XP by Richard Lowe

Well, Windows XP is finally out. After years of hype and hundreds of articles and lots of promotion, the new and wonderful, world changing operating system is here. Harrah.

For the home user this is a very good thing indeed. The earlier, DOS based operating systems such as Windows 95, 98 and ME were very unstable and had more or less lived out their usefulness.

In fact, I believe most home users will find Windows XP to be a very nice change indeed. The new operating system has many advantages which make it so superior to the earlier versions of Windows as to make it almost heavenly.

Some of the advantages which the home user will see include:

Plug-and-play that really works – In my book, this is probably one of the hugest time-savers of all. Personally, I love to add new hardware from time-to-time, and changes to existing equipment is almost a daily occurrence. The truly superb plug-and-play makes this completely trivial.

Stability – Windows XP is so stable as to be spooky. Don't get me wrong, a crash or two now and then still happens (as with all operating systems and equipment) but it's no longer the daily occurrence that it was with windows 95 or the three-times-daily occurrence with Windows ME.

Well designed networking – I found the networking capabilities of the older operating systems to be difficult and touchy. Windows

XP has changed all of that – the networking setups and easy and quick. Combined with plug-and-play for the hardware, you should find adding an XP machine to the network to be so simple as to be freaky.

Better device support – You will find that Windows XP supports more types of devices than ever before straight out of the box. CD/RW, DVD, USB and many others simply just work.

On the downside, though, are the following:

Older programs and games – While Windows XP does make a strong

effort to be compatible with the older operating systems, you will probably find that many games and other programs simply no longer work.

Older hardware – You may have difficulties if you attempt to install windows XP on older hardware or use older equipment. Windows XP does need much more power (CPU, disk and memory) than the earlier Windows operating systems. In fact, don't believe the promotional materials about minimum configurations – get plenty of memory, a fast CPU and as much disk as you can afford.

To sum it all up in a simple paragraph, Windows XP seems to work almost perfectly out of the box. It is stable and performs well given plenty of hardware. And that's the way a home operating system should work.

Printers

By John Gibb

Do you feel overwhelmed when buying a computer or a new printer?

You are not alone. With so many products to choose from I know exactly how you feel. The best approach when buying a computer related product is to educate your self. This way you are making your own decisions from your own self-judgment. That's go to be more powerful than listening to a sales guy, who is more concerned about getting commission than you – the customer, obtaining the

right product for your needs. How do you educate yourself? Start of slowly, most people don't want to become experts, they just want a computer or printer to do what is expected. Learn the basics of what computers and printers can offer you at

Not only will you find reviews guides and here. You will also find how to fix printers yourself. Learn how to set up your firewall correctly knowing you are safe from intruders. Never feel as frustrated as you once did, knowing the truth about computers and printers. Be sure to check out

Learn the difference between LaserJet and inkjet printers. Learn what the advantages are from certain computer products. With the wealth of information here, you will know other people are willing to help you and can understand where you are coming from. Don't forget everyone has computer and printer problems. The good news is, what ever your budget is, there is always a solution. Remember if you intend to phone a computer support line, seek a plan of action. Don't let them fob you off with technical meaningless babble!

John Gibb is currently the webmaster of several support and guide sites for various specialized topics. His latest addition is
