**Protect Your Home with Spy Camera**

**By David Z**

With the crime rate on the rise so too is the fear factor of the common consumer on how to protect themselves from lawsuits, fraud, and burglary. Fortunate it is that technology has taken such a sharp upward trend to introduce so many security devices to monitor and protect the consumer.

One of the most popular devices that has come down drastically in price is the Spy Camera. The spy camera use to be a figment of your imagination that was in shows such as Star Trek and James Bond. Now it is a reality with pen cameras, pin cameras, cameras hidden in sun glasses even. For as little as \$250 you can buy an entire kit that will use sensors and even remote Internet access with alarms. You have the possibility of hooking your house wide camera systems to the cable system and watching the cameras on any screen in your house on a certain channel.

On top of spy cameras you have a whole range of devices to protect yourself and your property. Trip wires, motion sensors, window and door detectors/alarms, cameras, spy camera, vaults, digital locks, finger print locks, and more. Everything is at an affordable price, the most expensive price would be to have a professional come in and install the equipment which can easily cost a few thousand depending on the size of your home.

If you are looking for an easier solution with a low budget, we can assist you in this. I will detail a simple system that will help to deter burglars. First, solar panel motion sensor lights. It would be helpful to put one in front and back. Second, use two hooks and one 2x4 to barricade the garage door at night.

Most burglars will enter through your garage since this is the most unprotected and commonly left unlocked. Place alarm stickers on the front door as a spoof to scare anyone away. Lastly, you can get simple alarms that you can connect to your door or window and with a switch hear when it opens with a bell or alarm.

These are very cheap items and can be installed in as little as 45 minutes. Consult an alarm company for more help and to see local prices on professional systems.

## **Under Water Digital Camera Housing**

**By Abby Johnson**

If the underwater world has left you mesmerized and you wanted to capture all those amazing moments while diving, snorkeling, canoeing or even surfing, but shuddered at the cost of an exclusive underwater digital camera, the underwater digital camera housings are a boon to you. It serves as a faithful recorder of all that you wish to capture underwater, as well as provide valued protection to your digital camera when it is needed most, like during skiing, fishing or sailing.

The die-hard protection of the underwater digital camera housings are rendered by clear and durable polycarbonate cases. Most of the underwater digital camera housings are watertight even up to depths of 131 feet. These are made from stainless steel and nickel-plated brass which gives it its durability.

The underwater digital camera housings help you keep full control over your valued asset. The most important thing to ensure is that they must have a large shutter button, a precision zoom lever and controls that last. These housings should protect your camera but at the same time, help you use the features of the camera. There are some manufacturers who also make the underwater digital camera housings specifically for certain of their underwater digital cameras. All these are part of their catalogue - you just have to choose the right one suitable for your use.

Since the most important part of your underwater digital camera is the lens, it needs the best protection. The better underwater digital camera housings have a type of window which is made of a type of fluorite glass which offers superior protection. It is also important to ensure that the housing must help diffuse the light of the internal flash and should never have anything that obscures it. Since you wish to see what is in front of you, it is wise to buy an underwater digital camera housing which has an easy-to-see LCD panel. This gives you the chance to use all the editing features while your

## Protect Your Home with Spy Camera

camera is placed inside the housing. The best choice is that kind of underwater digital camera housing which offers greatest protection without hampering the usage of any of the camera's features.

Maintenance of an underwater digital camera housing is simple. Many people soak the whole thing in fresh water, with the digital camera inside. Use silica packs to prevent fogging of the camera housing. Application of layers of silicon also helps to keep the housing in immaculate condition. Remember to follow the manufacturers' instructions strictly to derive the maximum benefits from your underwater digital camera housing.
