Protecting and Registering Your Ebook

By Shelley Lowery

Protecting and Registering Your Ebook by Shelley Lowery

Once you've created your ebook, you'll want to take the necessary steps to protect your work. Although many ebook compilers will enable you to password protect your ebook, none can offer complete security.

Copyrighting Your Ebook

The moment you create your ebook, the US copyright laws protect you. However, if you should need to file an infringement lawsuit, you must register. Although registration is generally voluntary, it is recommended, as you certainly don't want your work to be copied and claimed by someone else. If you don't take the time to register a copyright, you may have little or no recourse should your work be illegally copied.

Visit the following sites to register online:

MediaRegister
<http://www.mediaregister.com>

Click and Copyright
<http://www.clickandcopyright.com/>

For further information, visit the US Copyright Office:
<http://www.loc.gov/copyright/>

International Standard Book Number (ISBN)

Once you get your copyright, your next step will be to obtain an ISBN.

An ISBN is a 10–digit number that uniquely identifies books and similar products that are published internationally. It is used to uniquely identify one specific title, whether it is a book, ebook or similar product from one specific publisher. This number is completely unique to that one title or edition.

If you would like to sell your ebooks in bookstores or online, you'll need to obtain an ISBN. Once you obtain your ISBN, you can submit your title to be listed in the Books in Print

database. Bookstores and Libraries refer to Books in Print when they need to order a particular book from a publisher.

When you're ready to order your ISBN, keep in mind, it can never be reused. Once it is assigned to a specific title, it cannot be used again — even if the title is no longer available. What this means is that if you update your book in any way, you will have to get a new number. In addition, if you're offering your ebook in different formats, you must use a separate ISBN for each format.

The current price is \$225 for 10 numbers, which is the minimum you can purchase. You can order right online and should receive your numbers within 10 business days.

For further information, visit:

<http://www.isbn.org/>
<http://www.bowker.com/>

Bookland EAN Bar Codes

If you're planning on placing your ebook on CD–ROM, you'll need to use a bar code specifically designed for books. The Bookland European Article Number (EAN) is the standard bar code used in the book industry. It enables the ISBN to be encoded directly into the bar code.

An EAN begins with 978, which is the Bookland prefix. This code is used on books and similar products internationally. This code will enable a retailer to scan the code and easily identify a book by its ISBN. When the book is sold, the

cashier can scan the Bookland EAN bar code and retrieve the book price and other important information from the bookseller's database.

For further information, visit isbn.org to review their list of Bookland EAN Bar Code suppliers:

<http://www.isbn.org/standards/home/isbn/us/barcode.html>

If you're serious about publishing an ebook, make sure you research all of your options before you start. You must look at the entire picture before deciding upon the right format, whether or not you should copyright your ebook and if you'll need a bar code. You never know, once you write your ebook, you may want to expand your market and offer your ebook in different formats. Not only can you publish your ebook in PDF or EXE format, but you can also place it on

CD-ROM, format it for ebook reading devices or even Print on Demand. The possibilities are endless.

Shelley Lowery is the author of Ebook Starter. A complete ebook design kit that takes you step by step through designing, creating and marketing your own ebook. Give your ebook a professional look in just a few simple steps with over 100 ebook interface and cover templates.

Domain Name Registering Process Tips

By Larry Evans

Domain name is one of the hottest subjects of most discussions today. Many people were even finding some sorts of answers for their common query regarding the domain name registering process. A number of people today greatly indulged into domain name registering stuffs for some particular purposes and desires. So if you are one of those greatly save time for some domain name registering stuffs, then you should further read on for you to know some ideas behind this matter.

When we talk about some domain name registering stuffs, it is considered that so many factors are often connected. Of course, prior to the writing of this article, there are so many resources that discuss the domain name registering stuffs. So to particularly mention one of the common factors that surround the domain name registering processes, many related resources have considered that really exerting amount of efforts or interest on the matter is the most important factor. It is in the domain name registering junkies' hands that the success of the domain name registering process depends. Of course, the efforts of some accredited companies tackling or handling the domain name registering processes are also needed, but you should remember that it is the domain name consumers that the

process starts.

So when someone makes up his mind and decided to take for domain name registering processes, it is a very important thing to consider that the sole way for registering domain names is to utilize the services offered by the domain name registrars. Speaking of the domain name registrars, it is a common description that the domain name registrars are recognized organizations of the International Corporation for Assigned Names and Numbers or ICANN that were established for the purpose of aiding the domain name consumers in their domain name registering desires. The ICANN then is a non-profit corporation that holds the domain name management and other related principles.

For the domain name registering processes' sake, it is only the domain name registrars who have the power to access and modify the master database of domain names which is recently managed by the InterNIC, which is one of the biggest centers that take hold of the domain names. Mentioning the master database, it is very interesting to learn that this master database contains the documentation on the full domain names that are registered to date.

Moreover, it is noted that in the domain name registering process, there are some instances that those who wanted to undergo the domain name registering process fall to the situation where in the a certain domain name registrar is out of the list. If this happens, it is important to note that such kind of domain name registrar is just assuming as a reseller for one of the recognized domain name registrars as it is only those who are accredited domain name registrars who can amend the domain name database and so take control of the of the domain name registering process.

And finally, since the maximum time for domain names is just 10 years, the domain name registrars have no authority for selling more than a 10-year registration deal for any domain name. The domain name registering process is not that so tough to take if only all of the efforts between the individuals and the registrars are considered.
