Pueraria Mirifica Builds Up The Breast Produces Hormone In Menopause

By Anchalee

Have you ever wondered if what you know about Pueraria mirifica is accurate? Consider the following paragraphs and compare what you know to the latest info on Pueraria mirifica.

A committee is appointed to study Pueraria mirifica. It is reportedly found to be efficient in building up the breast and working as a substitute hormone in Menopause women. The government sector is ready to revise the law for Pueraria mirifica to be a dietary reinforcement product. The result is expected to be known in 3 months.

Dr. Suraphong Suepwongli, the Deputy Minister of Public Health, has said that a meeting of the working group considering Pueraria mirifica, which consist of a group of researchers from Chulalongkorn University, the National Cancer Institute, the Institute of Dermatology, the Department of Medical Sciences, Mae Fa Luang University, etc., was held to determine whether or not it would be possible to promote Pueraria mirifica production as a topping industry for commercialized distribution, as a conclusion of which a national-level committee was set up to be in charge of pushing Pueraria mirifica, with Mrs. Khrueawan Somana, the Advisor to the Deputy Minister of Public Health, acting as the chairman of the working group for revising the law, since it lags far behind the laws of other countries. The meeting also arrived at a conclusion that Pueraria mirifica is clinically efficient in working as a substitute in menopause women and there is a trend that it will be used to build up the breast and to cure Alzheimer's disease by generating a regrowth of cells.

As regards toxicity, there is a conclusion from the National Cancer Institute that Pueraria mirifica is non-carcinogenic and this conforms to a research finding of King Mongkut's Hospital that Pueraria mirifica can also prevent cancer, so there came a conclusion that a national-level committee be set up to be in charge of pushing Pueraria mirifica, which will consider from research at a clinical and the revision of the medicinal herb law, because there is not yet any favoring law, and this law lags for behind the laws of other countries.

So far, we've uncovered some interesting facts about Pueraria mirifica. You may decide that the following information is even more interesting.

Pueraria Mirifica Builds Up The Breast Produces Hormone In Menopause

The patent question was extensively discussed, Dr. Suraphong said, because there is already a case of patent registration by a Thai. In fact, that is a patent registration seeking to concoct Pueraria mirifica as an ancient intellectual background. The focus at this moment is a process of turning the effective substance in Pueraria mirifica into a standard product and taking the process to register a patent, which a representative of the Department of Intellectual Property will be invited to joint in considering, and where possible, the patent will also be registered aboard.

Dr. Suraphong quoted Prof. Dr. Urusa Thepphisai, a researcher from Ramathibodi Hospital, as saying that Pueraria mirifica is registered as a traditional drug under the Drug Act, while in the United States of America Europe and Japan it is dietary reinforcement product. The Department of Medical Sciences, the Food and Drug Administration and the Institute of Thai Traditional Medicine have been ordered to collect group of ideas to revise the law within 3 months for the Cabinet to consider subsequently.

Pueraplus is a premium grade Thai traditional herbal formula derived mainly from White Kwao Krua

(Pueraria Mirifica) which contains Phytoestrogens (Natural Plant Estrogen). After many years of research from Thailand, the studies indicated that this herb shows estrogenic and rejuvenate effects to the female body especially at the breast, hip, facial skin, body skin, hair and vaginal epithelium. Thus elevate the appearance of the female secondary sexual characteristics and also the skin beauty.

That's the latest from the Pueraria mirifica authorities. Once you're familiar with these ideas, you'll be ready to move to the next level.

Can what you eat really affect your breast size?

By Julie Walker

Besides breast enlargement herbs, you might even wonder if what you consume might even affect your breast size by enlarging them. Can what you eat really affect your breast size? In order to answer that question, let us go back to basic biology. As mentioned in my previous article "Herbs That Can Enhance Your Breasts", estrogen level is the highest when a girl goes through puberty. Estrogens are actually female hormones that cause the breast to grow. And when one outgrows puberty, the estrogen level in the body will then normalize and your breasts will then stop growing (maintain the same size it has grown during puberty).

Pueraria Mirifica Builds Up The Breast Produces Hormone In Menopause

Consider estrogen as a natural breast enhancer. Can food consumed by us containing plant estrogen perform the same function as the estrogen in our body? Can these food really increase your breast size? The estrogens found in food are called phytoestrogens. Phytoestrogens are similar to the estrogens produced in our body, except the fact that it is weaker. But the good news is, both estrogens and phytoestrogens are known to stimulate the growth of breast tissue, tested by reknown professors in this field.

Phytoestrogens can be found in foods such as soybeans, dried beans, tofu, lentils, tempeh, rice, soy beverages, alfalfa, linseed, mung beans, sesame seeds, apples, wheat, carrots, wheat germ, berries, oats, rice bran and barley.

So, can phytoestrogen food increase one's breast size? Most likely not!! That is if only the required quantities of phytoestrogen food are consumed in a normal diet.

In order to achieve results, one is expected to increase the level of phytoestrogens provided by a quality dietary supplement. Such supplements can also be thought of as "breast food"; as it contains concentrated herbal sources of phytoestrogens. In order to select a suitable dietary supplement good enough to enlarge your breasts, You need to search for a type which contains the types of food mentioned above and the different types of herbs mentioned in the article "Herbs That Can Enlarge Your Breasts";.

What Makes Pueraria Mirifica The Best Phytoestrogen?

"Miroestrol and Deoxymiroestrol " is very different from other phytoestrogen, as it posses highest estrogenic activity among the known phyto-estrogens due to structural similarity to estradiol, (Estradiol is the main human estrogen which can be found in all women who are at the stage of nursing baby (Lactating); as you may notice that all women who are in this stage, their breast will enlarge and gain firmness for feeding purpose.

Miroestrol and Deoxymiroestrol Can Only Be Found In Pueraria Mirifica!

But not every Pueraria Mirifica are created equal, they varies from species to species and the growing conditions.

There are more than 13 species of Pueraria Mirifica and most of them are called "Pueraria Mirifica"; or "Kwao Krua Kao" but this doesn't mean that they are the same, they

may look same in the appearance but they produce different results.

The only way to differentiate their difference is to measure the amount of Miroestrol and Deoxymiroestrol contain inside the roots of Pueraria Mirifica. An elaborate and expensive test need to be carry out in specialized laboratory to certify the actual amount of Miroestrol and Deoxymiroestrol found in any specific type of Pueraria Mirifica. And not many company would sent their Pueraria Mirifica for such stringent test. Majority of the Pueraria Mirifica products found in the market are made

Pueraria Mirifica Builds Up The Breast Produces Hormone In Menopause

from roots collected from villagers in the forests. And these villagers will be the ones that do the peeling, grinding, and the drying in their homes. Nobody can assure the sanitation, the quality and the amount of Miroestrol found in these Pueraria Mirifica powder.

Many foreign companies who have long settled in Thailand even open small shops to purchase the plant from villagers. If such practices is not stop, it would soon result in extinction of the plant because villagers would think of nothing but money.

The above Pueraria Mirifica information is found in Ms Yvonne Lee, internationally acclaimed book "To All Women Who Want To Enhance Their Breasts Naturally, But Don't Know How To Start". It describes and details the most important breast enhancement techniques from every corner of the world. Author Yvonne Lee, provides an unbiased pro-and-con analysis of each technique, in addition to practical information such as how and where to get it, cost, and potential impact on insurance coverage.
