Read a Good Job Search Book Today

By Marilyn J. Tellez, M.A.

Read a Good Job Search Book Today by Marilyn J. Tellez, M.A.

READ A GOOD JOB SEARCH
BOOK TODAY

Yes, you can get free guidance
from a job search book. My
yearly favorite is: WHAT COLOR
IS YOUR PARACHUTE? by Richard Bolles.

Others are: TRANSITIONS by
Bill Bridges; THE RILEY GUIDE by
Margaret Riley Dikel and THE
COMPLETE JOB SEARCH HANDBOOK by
Howard Figler.

There are often new titles for
specific population groups. To
find out more, use Google or Yahoo
to search databases for your own
needs.

All of this good, job search advice
can get you, as a job seeker,
to a good place to start your job
search journey. You don't need to
do EVERY EXERCISE that authors
suggest.

Sketch out an exercise that appeals
to you from reading the books I have

mentioned. One technique may appeal to you more than another. Use those.

More importantly, is the use of the books as a guide to get you started on your search. But books, will never take place of action! Read and act!

Google tests expanded search to include printed works

By Jakob Jelling

Google tests expanded search to include printed works by Jakob Jelling

Google Labs is currently testing Google Print, which returns results from within scanned printed books along with Google's standard web search results. The searcher doesn't have to do anything special – the printed work results are already included in the Google database. Searchers have the option of narrowing their search by including, for example, the word "book" in their search terms. For example, a search on "home repair" might return a variety of web sites, online merchants, etc., while changing the search to "home repair book" will help filter the results to include more material scanned directly from books.

Publishers don't want their entire books read online of course, so Google limits the number of pages a single user may read at any one time. A user can see the page where their search was found, plus they can go two pages forward and two pages backward from their original result page. Google provides links to merchants where the book can be purchased. Google earns no revenue from book purchases, but they do display their contextual advertising within the Google Print results, and they share this with participating publishers.

Once you've found your search terms in a book, you can then enter additional search terms that will be limited to the book itself, rather than the entire web. Google's selection includes both fiction and non-fiction, technical reference and professional books, textbooks, and more.

Since Google Print is currently in testing, a searcher won't necessarily find results from every book they expect to see. As the program grows, Google has indicated they will continue to add books to their searchable database. Publishers who want to participate can do so for free.
