## Repairing The Headlights On A Scooter

By Jason Uvios

A scooter with the safety feature of a headlight will require some amount of maintenance so you

always have a fresh bright headlight. A headlight is generally sealed tight, so little or no water is going to enter the headlight fixture. Many scooters are also available with a scoop over the headlight to prevent additional moisture from reaching the interior of the headlight.

If you do find that your headlight is getting a bit dim, or that you have moisture in the headlight fixture you should replace it. Sometimes a large jolt can break the headlight requiring replacement as well. Every scooter varies in headlight replacement needs, but the headlight is very similar to that of a car.

The headlight that requires a bulb replacement will use a very small bulb, just a size larger than that of a bulb found on a string of lights. Removing the headlight can be accomplished using a screwdriver or a wrench. Some scooters are available with easy to remove headlights that require no tools at all but the movement of a few slip connections to remove the headlight. Simply remove the old bulb, insert the new bulb, and refasten the headlight to the scooter.

Headlights that are one piece, with no interior bulb are easy to replace as well. The one-piece headlight generally is going to require a hex screwdriver or a regular screwdriver to remove the headlight. You can purchase replacement headlights through medical supply houses, through scooter retailers and online headlight sources. Knowing the make and model of your scooter will allow for easy replacement of your scooter headlight.

The once piece headlight is taken out by removing two or four screws that hold it in place. Once you have removed the screws, you pull out the headlight, and unplug the headlight from the scooter. The new headlight will plug into the electrical outlet, and then you place the headlight back into the socket. You should be sure to replace all of the screws you have taken out so your headlight is secure and in place once again.

Remember, every scooter is different, and the type of headlight your scooter is equipped with will be detailed in the manual provided with your scooter.

### **Advantages Of Owning A Scooter After An Accident**

**By Jason Uvios**

A scooter of your own gives you back your mobility, so you can do everything you want. You can rely on yourself, and your body once again. The ease of getting a motorized scooter out of the car or out of the van is one that you will not be stressed about. You can take the scooter from the trunk and put it together in under five minutes. You then, will be on your way to enjoying life once again.

If you have been in an accident and you have a leg in a cast, or perhaps you have both legs in a cast, a scooter will be your leg! You can get from room to room at school or in the home. A scooter is going to put your back into action, giving you the ability to do things for yourself, without having to wait for someone to do something for you. Use a scooter to get to school, to get to church, to get to the store, or get out in the driveway and soak in some sun if you have the urge.

After an accident in a car, while skating, while skiing or even while biking you could feel very stiff, and sore. With broken bones, it is very difficult to manage a wheel chair. If you have had an operation or if you have had an accident, a scooter is an electric mobility tool. You will be able to get around without having to strain your arms or even your back. Some people find they are healing better as they get to move around a little bit, get out of bed and do any thing for their selves.

Advantages Of Owning A Scooter After an accident, you want to do things but can't move around too well. You can use a scooter to get out, get to work, get to the store and see the doctor without having to use crutches or a manual wheel chair. A scooter is going to fold up, and you can store it in a closet, by your bed, or in the van. After you are healed, and you are walking again, putting the scooter away in storage in the house is always a good idea.
