**Robot Toy: The New Generation Play Tool**

**By Thomas Champeval**

Gone are the days when children satisfied themselves with simple games of hopscotch or tag. Heck, there are practically no more "simple toys" in the toy market nowadays wherein it's slowly being dominated by more and more complicated contraptions. From toy PDA electronic models to enhanced walkie talkies, children nowadays have more discerning taste when it comes to their playing pleasure. So in an age wherein cellphones and digital cameras are just all too common, what's really the buzz about the wonders of a robot toy? What makes a robot toy tick? And probably, most important, what makes a robot toy click? To put things simply, an electronic robot toy is an extremely sophisticated piece of technology especially for children who have always been used to playing with either plastic, wooden or plush toys.

Things are indeed a changin' nowadays, a robot toy is practically what each and every kid, well boys that is asks for in his wish list.

Starting with the very hip and ultra high-tech robot toy, Robo Sapien which promises to be a whole more than just a simple robot toy. A smart robot toy like this actually tries to break the mold ordinary plastic robot toys that only has blinking lights and beeping sound effects. Robot toys that are available in the market today are far more sophisticated than that especially since they've been able to make these robot toys more interactive. A very important factor when it comes to ensuring its saleability in this rapidly changing world of toy commerce.

Video games have been a common staple when it comes to electronic toy gadgets for children, however these cannot be considered as a robot toy. The once popular Tamagotchi may look and feel like a video game but it is actually in fact a robot toy as well. What's differentiates the Tamagotchi from being a video game you might ask? Well for one thing, video games are just electronic role playing mind games wherein you have a specific goal or task that must be taken care of while a robot toy like the Tamagotchi is actually highly dependent on the interaction between the Tamagotchi and the user. The Tamagotchi is actually a simulation of what is supposed to be of an animal, just like ordinary toy robots which are mock-ups of human beings while a video game is merely an audio visual device that is used to play games.

There are actually all sorts of robot toys available in the market today, from highly sophisticated, not to mention, costly, Robo Sapien to outdated Tamagotchis to high tech robot toy pets that have caused

quite a stir even in Japan wherein people don't really have that much time to take care of a real dog. Robo pets have been creating a lot of buzz in the toy market because of its highly innovative design and almost life like actions, Robo pets usually comes in either a pet dog or a pet cat. It can play fetch, run, heel, even bark at you.

This robot pet has certainly come a long, long way from the old wind-up robot toys that used to be every kid's fancy. Come to think of it, not only children are getting into the whole robot toy craze, with many grown adults now getting more and more hooked to the highly sophisticated robot toys in the market. Considering that adults do have the spending power as compared with children who are still reliant on their parents' mercy, toy companies are also trying to come out with robot toys that can be appreciated by adults as well.

### **Robot Vacuum: Making Household Cleaning Incredibly Easy**

**By Thomas Champeval**

Robot vacuum are here to stay. Vacuuming, as well as other cleaning the house isn't really our favorite things to do since it takes up a lot of time. This is exactly what the makers of the Roomba vacuum robot had in mind when they invented this nifty creation. You need not worry about dust bunnies or messy carpets anymore with the vacuum robot, running on rechargeable batteries, the Roomba vacuum robot will not need your supervision anymore as it roams around, cleaning every nook and cranny of your house – it's actually great for those hard to reach places. With its built it sensors, the Roomba vacuum robot can make the rounds without falling off the staircase or crashing into walls or whatever furniture that you have lying around the house.

You really can let your hair down and relax once you leave all the cleaning to this remarkable vacuum robot because when it's done with a task, it'll start beeping and afterwards, turns itself off. How's that for effective and safe vacuuming? You might ask, `is there a catch to this?`, certainly none. Not only is this vacuum robot highly effective and safe for your household (you need not worry about having it around with your kids), this intelligent device is actually very affordable to, with more and more people opting to buy robot vacuums instead of the usual vacuum cleaners it's practically safe to say that robot vacuums like the ones from Roomba are certainly the way to go.

There are actually many different kinds of Roomba robot vacuums available in the market today, take
