Robot Vacuum: Making Household Cleaning Incredibly Easy

By Thomas Champeval

Robot vacuum are here to stay. Vacuuming, as well as other cleaning the house isn't really our favorite things to do since it takes up a lot of time. This is exactly what the makers of the Roomba vacuum robot had in mind when they invented this nifty creation. You need not worry about dust bunnies or messy carpets anymore with the vacuum robot, running on rechargeable batteries, the Roomba vacuum robot will not need your supervision anymore as it roams around, cleaning every nook and cranny of your house – it's actually great for those hard to reach places. With its built it sensors, the Roomba vacuum robot can make the rounds without falling off the staircase or crashing into walls or whatever furniture that you have lying around the house.

You really can let your hair down and relax once you leave all the cleaning to this remarkable vacuum robot because when it's done with a task, it'll start beeping and afterwards, turns itself off. How's that for effective and safe vacuuming? You might ask, `is there a catch to this?`, certainly none. Not only is this vacuum robot highly effective and safe for your household (you need not worry about having it around with your kids), this intelligent device is actually very affordable to, with more and more people opting to buy robot vacuums instead of the usual vacuum cleaners it's practically safe to say that robot vacuums like the ones from Roomba are certainly the way to go.

There are actually many different kinds of Roomba robot vacuums available in the market today, take your pick from the five available models :

* The Roomba Red – still a newbie when it comes to robot vacuums? The Roomba red robot vacuum is a good choice for an entry-level robot vacuum since it can provide for your most practical cleaning and charging needs. Simple yet very functional.

* The Roomba Sage – looking for the ultimate robot vacuum that can meet your most common needs while still being very affordable? The Roomba sage vacuum robot will certainly satisfy your needs with its enhanced Maximum Cleaning Mode as well as its many available accessories.

* The Roomba Scheduler – for those who are will to shell out a little more extra cash for their robot vacuum, the Roomba scheduler is very ideal for those who want to have the convenience of being able to schedule your robot vacuum's cleanings on times and dates that are most convenient for you.

* The Roomba Discovery – if you really want a top of the line robot vacuum then the Roomba discovery might just be the robot vacuum for you with its many enhancements like self charging and a remote control, it gives you more luxury of time as compared with the other models.

* The Roomba Discovery SE – again, in order to satisfy your needs for ultimate cleaning convenience,

this version of the Roomba discovery robot vacuum has everything that its predecessor boasts of but with the added Wall Mount feature wherein your robot vacuum can be conveniently tucked away while it is self charging.

All of the Roomba robot vacuums come with a 1 year warranty, to help ensure its patrons the quality of these products. There are also various robot vacuum accessories that you can choose from in order to enhance your robot vacuum's performance. Proper use and maintenance need to be observed in order to make sure that the Roomba robot vacuums will have a longer life and you to not worry about those dust bunnies lying around your house.

Easy Cleaning With Robotic Vacuum Cleaners

By Jonathan Brunet

Ever Since robot vacuum cleaners were introduced to the market, cleaning has been a breeze. The robot vacuum cleaner is fully automatic, and not in the same sense as they were before. It's efficient, cordless, and hands-free. Gone are the days that you had to push that bulky vacuum cleaner around the house and get back pains from using it. Technology does evolve.

Several companies have developed robot vacuum cleaners. The most popular, due to its affordability is Roomba, which is manufactured by iRobot. The Roombas available on the market range from CAD \$250 to CAD \$450.

Would you believe that those robot vacuum cleaners utilize the same military technology used when clearing fields of land mines? These robot vacuums run around the floor randomly, turning on every bump and wall it encounters. It cleans around furniture. It has sensors that would prevent it from falling down the stairs and cliffs. Intelligent, isn't it?

These also come with a virtual wall device. You attach this device on an open doorway in order to keep the robot vacuum well within the room. It emits infrared that, when detected by the robot vacuum, make it turn and go to the other direction.

Robot Vacuum: Making Household Cleaning Incredibly Easy

The robot vacuum cleaner mainly looks like a disk and not anywhere like a movie robot with appendages. Kind of spoils the fun for kids expecting eyes and arms, but then it does the job. The vacuum cleaner has a disk-like structure so that it can go under sofas and cabinets, places your regular vacuum definitely won't reach. It has fine brushes to effectively clean carpets and rugs. It has filters so anything that's quite big won't get sucked in and jam the system. You don't even have to worry about recharging, it can actually recharge itself. The docking system emits an infrared beam so the robot vacuum can find it, go back to it and recharge to be all set for next cleaning session.

The robot vacuum cleaner has its limitation. You're not supposed to run it over something wet and sticky. And regular pre-vacuum preparation still applies. You still have to pick up the things scattered that would snarl the brushes like toys and socks. Nor can you use it on those thick shag pile type rugs. The manufacturer claims it can't handle those situations just yet.

The comfort of using one of these robot vacuum cleaners is awesome. Most of the models contain only three buttons. The buttons are selectors so you can choose the cleaning mode.

Cleaning the house can now be done unattended. Moms can cook lunch while cleaning the house at the same time. Chores around the house can be done in a jiffy, thanks to the robot vacuum cleaners. It's a big help for working people, especially moms, who would rather enjoy some time with their kids rather than do some household cleaning.

For a Robot Vacuum, such as the IRobot Roomba and Scooba, a robot lawn mower, robot toys, robot kits and construction kits, such as lego mindstorms 2.0, please visit
