**Save Time, Money and Hassle – Stop Spam**

**By Justin Brown**

Spam can be an absolute nightmare, and one that seems to spiral out of control in some of my

email accounts. If i've been away for a few days and haven't had a chance to check my emails, I dread having to open up my email client when I get back online in anticipation of hundreds or thousands of spam emails.

Although I simply delete these emails, for some, they seem legitimate messages that can often cause the recipient to become the subject of a fraudulent activity. An example of this that many people may have experienced are the emails that claim that you have won the lottery in some country that you probably haven't even visited, or emails that ask for you to help claim a substantial amount of money for someone who claims to be entitled to millions of dollars from a lost relative. These types of emails are laughable but for a lesser experienced internet user, they pose a great threat.

This was when I decided to use a spam blocker to prevent the hassle and time wasted deleting spam emails.

Spam has been around since the medium of email became popular. Even though there have been several laws passed that are trying to limit the amount of spamming activity, it still exists. A good way to stop the annoyance and the time wasted deleting spam emails is by using a spam blocker. They can also save you a lot of money in the scenario where you are unfortunate enough to receive a virus from a spam email. This has happened to me before, and I can honestly say I will now do everything possible to stop it from happening again because of the hassle and time it took to get my pc back to the way it was. In fact this took several weeks and numerous times formatting my hardware, which despite my best efforts resulted in quite a few programs and software being lost.

But why do people fall victim to spam emails? The truth is that the spammer is becoming cleverer in the way that they set up the scams. It was not so long ago that I received an email which was apparently from Paypal. The email was pretty well written and even the links seemed to point to the Paypal site. I felt it was not genuine though as it asked me to click a link to visit the "Paypal" site, whereas I had read some time ago never to click a link in an email to visit the site, but to type the address directly into your internet browser so that you can rest assured that the site is genuine. It is a

distinct possibility that many internet users will have fallen for these types of emails.

Do not become a victim of the consequence of spam emails. A spam blocker is a simple solution that will prevent the emails from ever reaching your inbox. They can save you time, money, hassle, and any potential problems that spam emails possess.

to read up on how a

spam

blocker

is essential online.

## **A Quick Look At Email Spam Filters**

**By Oliver Turner**

You must be eagerly finding for a way out to stop receiving Spam mails in your inbox. Take a quick look at email spam filters to get some idea on how to check spam. There are a number of email spam filters that you can use in your computer. For official purposes, you have anti server software spam where the spam filter is located in the server level to trap all email spam. They prevent them from reaching your inbox. The email spasm not only slows down the performance of the server, but also occupies a lot of storage space. Emails are the easiest and the best way for these viruses to spread.

### **Working of Spam Filters**

Anti spam software and anti spam solutions are essential to aid you in getting a clean inbox. The server spam filter or anti spam server is a software application that scans all the incoming email messages. With the help of their configuration, they identify Spam and prevent them from reaching your inbox. The spam mails not only eats away the storage space and make selecting your personal emails difficult, they also can contain viruses. Using anti spam filters is necessary as it saves both your time and money. But even when you are using anti spam filters, it is recommended to check the messages just to make sure that no personal message has been marked as spam. Even the server spam filters marks email as "false positive" to those that are identified as spam, but in reality they are valid messages. There are various anti spam programs that identifies Spam and sends it to the junk mail folder.

Not all spam filters work in the same way. Some of them are pre programmed where the know spammers are inserted. They accordingly block them. Some of the programs filter the emails based on the keywords used in the mails. Some of the email spam filters are configured and you can easily

customize it or the network administrator can also customize it according to the requirement of the company.
