Seinfeld (Season 4) DVD Review

By Britt Gillette

One of the best sitcoms not just of its time, but of all time, Seinfeld redefined the sitcom genre. No

longer was it necessary to have contrived plot, a lesson to be learned, or some other ridiculous cookie-cutter approach. With Seinfeld, an episode could be about nothing and everything all at the same time. The show follows the lives of four friends living in New York City, stand-up comedian Jerry Seinfeld, his childhood friend George Costanza (Jason Alexander), his eccentric next-door neighbor Cosmo Kramer (Michael Richards), and his ex-girlfriend Elaine Benese (Julia Louis-Dreyfus). Together, they form one of the most unforgettable comedy teams in television history.

The Seinfeld (Season 4) DVD offers a number of hilarious episodes including the season premiere in which Jerry asks George to accompany him on a trip to Los Angeles where he'll be appearing on The Tonight Show. While in Hollywood, the two attempt to track down Kramer who recently moved there to become a star. But the trip goes awry when hotel maid Lupe can't grasp the concept of George's preferred bed tuck, Jerry loses his Tonight Show material, and Kramer is fingered by local police as the prime suspect in the "smog strangler" killings... Other notable episodes from Season 4 include "The Bubble Boy" in which George incurs the wrath of an entire township following his argument over a Trivial Pursuit question with a local handicapped icon who (for medical reasons) lives in a bubble, and "The Contest" (based on a real life Larry David experience) in which Jerry, George, Kramer, and Elaine place a wager on who can practice self-denial the longest... "The Junior Mint" and "The Handicap Spot" round out a year that is arguably the best season in Seinfeld's hilarious nine-year run...

Recordable DVD formats explained

Recordable DVD formats explained by Kenny Hemphill

Picking your way through the ton of information available on recordable DVD formats can be a nightmare. To help you out, we've done our best to distill it into this summary.

There are five recordable versions of DVD; DVD-R for General, DVD-R for Authoring, DVD-RAM, DVD-RW, and DVD+RW. None of the formats is fully compatible with the other although there are drives which will read, and in some cases write to more than one format.

DVD-R for General and DVD-R for Authoring are essentially DVD versions of CD-R. And DVD-RW is a DVD version of CD-RW. All three formats can be read in standard DVD-ROM drives and in most DVD video players. The difference between DVD-R for General and DVD-R for Authoring is that DVD-R for General is a format intended for widespread consumer use and doesn't support 'professional' features such as piracy protection or duplication in mass duplicators. The Pioneer DVD-RW drive which is the most popular PC device for writing to DVD uses the DVD for General format. And as the case with CD, DVD-RW is essentially the same as DVD-R except that it can be erased and written to again and again.

DVD-RAM is slightly different as it is a sector based disc which mounts on the desktop of a PC when inserted into a drive. Files can then be copied to it in the same way as any other mounted media. Some single-sided DVD-RAM discs can be removed from their caddy and inserted in a DVD-ROM drive which will then be able to read the content of the disc.

There are DVD video recorders which use the DVD-RAM format. This enables them to pull off clever tricks like timeshifting - where you can watch the beginning of a programme you have recorded while you are still recording the end on the same disc.

DVD+RW is the newest format and not supported by the DVD Forum, the body which sets the

standards for DVD. However, it is supported by some of the biggest electronics and computer manufacturers, and is therefore likely to stick around.

It is also the format used by Philips in its DVD video recorders. Despite not being authorised by the DVD Forum, DVD+RW is claimed by its supporters to be compatible with more DVD video players than DVD-R and DVD+RW writers are found in PCs from quite a few manufacturers.
