## More Than Just a Phone

Selecting a cell phone is no longer just about mobile communication - it is now a lifestyle choice. If you don't select the phone that fits your personality, you won't be happy with it. New cell phones are beginning to have little in common with earlier cell phones. The new models feature color screens, digital cameras, high-speed internet connections, multimedia games, and music playback. In case you were wondering, you can also use them to make phone calls. It's only a matter of time before everyone has these features on their cell phones.

Text messaging or "texting" is now available standard on most cell phones. It is similar to instant messaging except that messages are sent and received by cell phones instead of computers. Multimedia messaging allows you to send audio, video, and pictures as an attachment to a text message. Multimedia messaging was once seen as entertainment, but is rapidly becoming valuable to the business world. Real estate agents take photos of houses with their cell phones and employment agencies may use camera phones to photograph job applicants - all away from their office.

## Dial In On the Options

## Selecting a Cell Phone

Cellular providers in the United States use either GSM or CDMA technology. When you buy a cell phone, it is tied to either GSM or CDMA cellular network, but can't be converted from one to the other. If you ever switch cellular providers, you may also need to switch phones. Most cellular providers now have high-speed data networks. These data networks work with high-end cell phones and special network cards you can purchase for laptops. Data networks usually transmit data slightly faster than a dialup internet connection. These networks are still being developed and are yet to be available everywhere. Look for higher speed networks to be much more common by 2006.

If you want to purchase a camera phone, consider what quality of photos you need to take. Most camera phones have less than a one megapixel resolution, which produces low-quality images. If you need to take clear photos, look into a camera phone with 3 or more megapixels.

Voice Dialing and Bluetooth are becoming standard in many phones to make it easier and safer for people to use their phones while driving. Voice Dialing allows you to speak a person's name into your phone, which will automatically find the person in your address book and dial the number for you. Bluetooth lets you connect a headset to your phone without wires. Some luxury cars are beginning to offer Bluetooth connectivity so that you can take calls in your car through the built-in speaker system.

Some newer cell phones are being designed with an emphasis on entertainment. They can be used to play music MP3 files, stored video and even movies, and video games. In general, the newer phones are all getting smarter and more specialized.

After you're done choosing the features that you want, don't neglect the practical aspects. Look at how often you will need to change the battery, whether the screen and keypad are too big and too small. Also, caveat emptor: most cellular providers lock you into a one or two year contract when you purchase a phone from them. If you cancel your service, they will charge you an early termination fee.

Deryck Richards is the founder and managing partner of Desktronix. With an extensive background in computer information systems, Deryck manages hosting and data center operations for Desktronix. He also provides system administration and technical support to small businesses as he has since 2000. For more information on Deryck Richards and Desktronix, visit

The Hottest thing with cell phones is the ability to take pictures with your cell phone. You can take pictures with your cell phone and e-mail them to family and friends with the touch of a few buttons.

There are no tricks involved and it is a fairly simple process. Just aim and shoot to capture all the fun

## Selecting a Cell Phone

right on your cell phone. Press a few buttons and bam it's right on your freinds phone or sent to their email.

Factory-to-dealer sales of camera phones grew from 1.2 million in 2001 to 6.3 million last year with estimates that last year's sales will double this year and triple in 2005. Some say that this is going be the next standard on cell phones to come but video cell phones are being marketed to Japan as we speak.
