Silver Spray Kills Super Bugs Quickly

By Melissa Gordon

Silver Spray Kills Super Bugs Quickly by Melissa Gordon | October 21 2004

Most of us go through cycles of "colds" during the year, sometimes they require antibiotics and sometimes we're told they're viral; either way its not fun. Extended bouts of allergies, chronic sinusitis and lung infections are even worse. The sinus pills at the grocery store offer a little relief but they don't cure sinus infections and bronchitis. Now there is a treatment besides suffering, anti-biotitic treatments and painkillers.

Colloidal silver is proven antibiotic, anti-fungal and anti-viral treatment that was used by medical doctors before the advent of penicillin. Silver de-activates an enzyme that all one-celled organisms need to survive, this allows it to kill almost all germs, even the cold virus!

One of the upsides to colloidal silver treatment is that it kills fungus; according to a recent mayo clinic study, most cases of chronic sinusitis are actually caused by fungus. The anti-fungal properties of the silver treatment are perfect for people with suppressed immune systems such as AIDS and CFIDS/FIDS sufferers as well as people with chronic fungal infections.

Like all antibiotics , silver kills off good bacteria in the intestines and could build up in the body causing problems. Fortunately there is a way around both of these side-effects. The new sinus and lung spray form of colloidal silver doesn't enter your intestines and only takes a small amount to be effective. This is because it goes directly to the problem instead of circulating throughout your body randomly. It's fast and relatively cheap—a wonderfully simple way to home treat without a visit to the doctor. The spray is available online at <http://colloidalsilver.8k.com/cart.html>.

Colloidal Silver – Time For a Comeback?

Silver Spray Kills Super Bugs Quickly

By Levi Bloom

I'm sure you know what it's like to be sick. Stuffy head, running nose, sore throat, coughing, fever, and maybe even vomiting. It really sucks. And with the overuse of prescription antibiotics, you can't be sure if they will even help next time around.

So it's time now to test out some alternative medicine that was actually used commonly before 1938. This product is colloidal silver, which is simply silver particles suspended in purified water. Silver was pretty popular back in the early 1900's, but it was fairly expensive to make. It slowly faded into the background once more "financially lucrative" drugs came out.

Here's a little info from a couple decades ago:

The March 1978 issue of Science Digest, in the article, "Our Mightiest Germ Fighter," reported: "Thanks to eye-opening research, silver is emerging as a wonder of modern medicine. An antibiotic kills perhaps a half-dozen different disease organisms, but silver kills some 650. Resistant strains fail to develop. Moreover, silver is virtually non-toxic."

From what I've heard, it sounds like the silver binds to an enzyme in these single-cell organisms, and then the organism can no longer use oxygen, so it dies. You get the picture.

The cool thing is, while the silver destroys these pathogens, it does not harm the cells in the surrounding body tissues. It's safe for humans, animals, and plants! And you do not develop a resistance to it like with other antibiotics.

Feel free to use it for nasal drops or put it directly on cuts or burns. It's even supposed to fight athlete's foot!

I started using it last year (2003) and have had pretty good luck. Even though I'm in college and live in a dormitory, I haven't been sick for more than a few days and never was I sick enough to have to stay in bed more than usual. Whenever my mom first told me to take it, I said it was worthless, but I have since changed my mind.

If you want to try it out, I suggest you buy it from LifeForce International. Some other sources are quite inferior.

If you're feeling sick, the sooner you try it the better!
