Snapper Mower Models

By A.Caxton

Snapper Inc manufactures a number of models of lawn mowers apart from the generators, utility vehicles, leaf blowers, and leaf vacuum etc. Read about the lawn mowers manufactured by this company

"It's That Easy", Says Snapper Models

The snapper mower models are available from Snapper Inc. These models come in Walk behind, rear engine rider, zero turn mowers, lawn & garden tractors, rear tine tillers and the like. Snapper Inc. also have the utility vehicle and the golf carts. Here we will consider only the walk behind and the riders models and get the details of one or two models and review them in detail

Walk behind models: These models come in easy speed and easy line series. The easy speed models incorporate the disc wheel drive that connects the engine power directly to the wheels so easy movement of the wheels. It is like 4-wheel drive for the lawn mower and the operation is very smooth. There are no clutches and the lawn mower purrs into action as soon as you start it.

The high wheel model comes with raised rear wheel of 12-inch diameter and 8 inch front wheels that are swiveled for easy action. Easy action seems to be the watchword in all the models of easy line series.

There is another model with a rear discharge bag so that you know the amount of grass you have cut and you can stop after you fill up the bag in front of you. The bagging is done by hi-vac system, so all the cut grass is sucked and bagged.

The mulching blower model incorporates patented Ninja Mulching system. The model churns out the cut grass by cutting and re-cutting into fine mulch that is then fed to the ground. The grass just disappears after being cut. The effect is good for grass growth.

Snapper rider mowers: Snapper has the rear engine drive invented by the engineers of Snapper Inc. The models are available in three-in-one discharge models so that you can bag, mulch or side

Snapper Mower Models

discharge as per the choice selected by the driver. You can select the operation depending on your wish or the condition of the greens.

The snapper riding models incorporate some unique features so that the drive through the grass is smooth and without any problem. The features are,

You can have a variety of Kohler or Briggs & Stratton engines according to your requirement and easy operation of the lawn mower.

It has a firm frame that can follow the contours of ground as the frame is pivoted at one end and free at the other end.

It features disc drive transmission that is sealed and 4+1 speed gearbox. It has synchromesh transmission on all gears so that you can change the speed as you go.

The response from the steering is quick and the small turning radius gives the driver extreme maneuverability so that even the tight spaces are well covered while cutting the lawn.

The rear engine models have 16 inch tires that are friendly on the turf.

If you wish to service the engine or the transmission, the machines have a unique feature of Stand-on-end so that maintenance becomes easy.

The sizes of the width are 28 to 42 inches.

You can use the Snapper with ease and that is why the company says, "It's that easy".

The Grass Is Greener With The Right Lawnmower

By Martha Mountjoy

Choosing a lawnmower is different than other things that be purchased for the home or the yard. They can be used in many different types of conditions. A lawnmower has to be catered to the type of grass

Snapper Mower Models

that you will be cutting. You probably wouldn't want a riding mower for your small backyard and you, more than likely, wouldn't use a compact push mower to mow the back acres of your ranch.

The most important aspect of choosing the right lawnmower is finding out what type of cutting you will be doing. The types of grass can be different as well but knowing the size of the lawn is key. Smaller lawns generally use smaller mowers but make sure when choosing a mower that the turn radius is sharp enough. Do you have a fence, a tree box, bushes, where you will need a mower that can cut sharp angles? Know the dimensions and obstacles in your lawn and which mower can move around them.

Depending on the size of your lawn you can get a push mower and a riding mower. If you have a very big lawn then a riding mower may be a good option as sometimes push mowers can be bad on the back if they are used for long stretches of time. But if you really want the exercise there are push mowers which are better on the back than others, so make sure you check out the different models.

One thing to know before purchasing a mower is if you want to bag the grass as it is cut or afterwards. If you have a smaller lawn than a bagged mower is a good option as it bags up all the grass as it is cut. On larger lawns the bags can become full quicker and slow the mower down.

So know the size of your lawn and pick the lawnmower that will suit it, and you, best. You can also ask a professional at a lawnmower retailer as they should ask you what kind of lawn you have before buying the lawnmower.
