**So, You're In The Market For A Video Camera**

**By Maxine Schel**

There are momentous events that occur during our lives that later on, we will end up wishing we

had on tape. Photographs are no longer the preferred method of storing memories, giving way to video cameras instead. As more technological advances are made, there are bigger and better video cameras on the market available for purchase. It is ultimately up to you to decide which video camera will best suit your needs.

A video camera can be a major purchase, and should be a well-informed and researched decision. There are a lot of resources available online or at your local bookstore that would be very helpful in your knowledge quest.

If you plan on recording for long periods of time, more than a couple of hours, you should try to opt for a video power that is an energy saver, or else you will spend your recording time changing out and recharging batteries. It is a good idea to have a couple of spare batteries anyway, just in case.

Most video cameras now come equipped with a viewfinder, which is much handier for the user than looking thru a little round hole, or eyepiece, to see what they are recording. The downside to recording and using the viewfinder, however, is that it sometimes can be a bigger drain on your battery time than just using the eyepiece. Using a viewfinder makes it much easier to film hard to reach shots, while allowing you better control over what you are filming.

Before making a purchase, you should familiarize yourself with digital and optical zoom. With optical zoom, you tend to get a nice sharp, well focused image. Digital zoom doesn't offer a sharp picture; it's basically a magnifying effect. You will probably be much better satisfied with a video camera that has both digital and optical zoom. Focus more on the optical zoom if you want high quality videos.

Many of today's video cameras offer a feature called image stabilization. This feature helps prevent the video from being shaky and jumping all over the screen when you watch it, therefore producing a higher quality video. Image stabilization helps to filter out the normal shaking of the camera.

## So, You're In The Market For A Video Camera

Some video cameras can now pose as still picture cameras as well, thus eliminating the need to take two cameras to events. You can get live and still shots in one piece of equipment.

One neat feature of some video cameras is the ability to record to DVD, which recently, seems to be the most preferred type of media.

If you are a newbie when it comes to shooting film, you can also opt for a video camera that will basically do everything for you but hold the camera. They come now equipped with auto focus and light adjustments, so all you have to do is press a button and shoot.

There is such a wide range of video cameras on the market today; it can become confusing when trying to decide which one will best suit your needs. Doing your homework beforehand, can help save you a lot of time, and possibly help ensure you truly do make a wise investment.

## **The Consumer Push and Drive for the Camera Phone**

**By Colin P**

One of the most innovative and widely sought after pieces of technology to reach the market in recent years has been the camera phone. In point of fact, the demand for a camera phone on the part of the typical consumer around the world is so intense that there oftentimes are situations when there is a backlog on orders for one camera phone model or another.

Naturally, when the camera phone first hit the market not that long ago, it was a pricy item. But, as with so many technological advances, in short time the basic camera phone became affordable for most people. Indeed, as more and more people sought to trade in an older cellular or mobile phone, it was the camera phone that they sought as a replacement.

Of course, in addition to the basic camera phone becoming more affordable and more widely used, there were many new developments in the world of the camera phone. In little time, there were so many variations on the theme of the basic camera phone, that in many ways it is more than safe to say that when it comes to the camera phone, there truly is a camera phone to fit the needs and desires of any consumer the world over.

## So, You're In The Market For A Video Camera

If you are interested in owning a camera phone, you should spend some time determining how you will use your camera phone. For example, if you largely will use your phone to take pictures of family and friends and the like, you really will not need that complicated of a camera phone. On the other hand, in this day and age, many people are using their camera phone products for professional or work related purposes. As such, these people tend to desire a more sophisticated version of the camera phone.

Once you identify the primary use that your camera phone will be put to now and into the future, you can then be able to single out some different camera phone models that will best fit your needs and desires. By making a preliminary list of what exact camera phone models will suit your needs, you can then begin efficiently shopping around for the specific camera phone that will most appropriately fulfill your objectives in owning and using such a product.

In the 21st century, you have the ability to shop for a camera phone both in the brick and mortar world and on the Internet and World Wide Web. By making certain that you do shop around both in the real world and in cyberspace, you will have the best chance of finding the most ideal camera phone and a price that best fits within your budget. And, by shopping around online, you will be able to save time in your search for a camera phone.

In the end, by taking the time to find the perfect camera phone for your needs, you will end up with a camera phone that will be well used and well liked by you today and on into the future.
