So, you've decided to kill your pet!

By Mariangie Gonzalez

So, you've decided to kill your pet! by Mariangie Gonzalez

The other day I was doing a research online for an article I was writing and I came across an article, which the author started by saying: "Euthanasia, is often the hardest thing to do, yet the greatest act of kindness".

Then he went on explaining the "grueling" suffering and the guilt the pet owner goes through before making the decision, how it affects the whole family, especially the kids.

But then he explains euthanasia in the most loving way I've ever seen someone describe a murder. I remember "simple and peaceful" were some of the words he used, he even gave recommendations on how to avoid stress during the ride to the vet's clinic.

The GREATEST act of KINDNESS? To whom? That little bundle of love didn't know what was happening, he just knew that he was the happiest guy when you got home from work, he assumed you loved him back because you took him to walks on the park and you pampered him with professional grooming every once in a while. Little he knew that:

1) You were slowly poisoning him with the cheapest discount store pet food, that didn't have the proper nutrients, but in turn was filled with toxins.

Processed pet food suppresses the immune system and leads to liver, kidney, heart and other degenerative diseases. You are going to be shocked when you know the nasty things that are used to manufacture your pet's food, if you want to read the most shocking report on pet food click on: "What's Really in Pet Food".

2) Your choice of grooming products was the reason of his constant itching.

Commercial pet shampoos contains many toxic and destructive chemicals such as the foaming agents sodium laureth sulphate and cocamide betaine. These strong chemical de-greasers strip the hair of up to 4/5 of its natural oils and eventually produce sore, dry scalp/skin conditions and irritate the eyes.

So, you've decided to kill your pet!

3) You lead him to the degenerative diseases that put him in that cold, stainless steel table wondering: "What's next?"

If you would have considered holistic pet care, for your furry friend, you could have been able to treat conditions even before the symptoms showed up and maintain your pet in balanced wellness avoiding him unnecessary pain, because holistic is not something metaphysical as many people may think, it simply means treating the body as a whole.

You don't have to kill your dog (or cat), you have a choice: PREVENTION– that is the GREATEST act of kindness. It's never too late to start taking good care of your pet, remember, we're talking about the one who's proud to be seen with you even if you're ugly, the one who stays by your bed when you're

sick, the one who in the event of inverted positions, would not hesitate to take good care of you. Start now!

Mariangie Gonzalez is an Agronomist with a major in Animal Science & Pre–Veterinary and runs the day–to–day operations of her home–based business which carries aromatherapy products, natural remedies, nutritional supplements and much more. She can also help you start your own home–based 100% natural pet supplies business, you can visit online at: <http://www.MindBodyAndPaw.com>

Lyme Disease Treatment in Pets

By Niall Kennedy

Lyme disease can be treated with antibiotics, because the disease is caused by a bacterium that is introduced to your pet through a bite from a tick carrying the disease.

Antibiotics will be taken for a long period of time and some times and may not be very effective if your pet has had the disease for a long period of time. Sometimes, your veterinarian can switch the antibiotics so see if that may cure the disease. But, if your pet does get bitten again, the disease can reoccur.

So, the best treatment for lyme disease is in the prevention. Ticks can be found in many different areas and are just waiting for the next warm body. Keeping your pets out of thick brush and high grass will help them from getting ticks, but there are many products on the market today that can in fact keep ticks off of your pets or kill these pests if your pet already has ticks.

Bathing your pet or grooming your pet can also help in preventing ticks the time to attach to your pet. After, your pet has been outdoors, comb him completely and check his skin. This can be a long process if you dog or cat has long hair. But, it will be well worth the time.

If you do find a tick on your pet and it is moving around then you will be able to remove it very easily. Be sure to kill the tick. If the tick has attached it is very important it remove it properly. You can use tweezers or your fingernails. Grab the tick close to your pet's skin and pull straight out very firmly. Do

So, you've decided to kill your pet!

not allow any of the contents from the tick on your skin or your pet's skin. Lyme disease can be transmitted through a cut on the skin. And yes, humans can also contract lyme disease.
